A collaborative  
approach

# A collaborative inventory of coin finds

The idea of the ***web portal*** is to provide ***minimal information about coin finds and the related bibliography***, without any pretension of completeness or homogeneity, ***based on a collaborative approach***.

The ***complete dataset*** stored in the portal is ***available in periodical PDF reports*** that ***can be re-distributed under license CC BY 4.0***.

***Anyone can contribute! Subscription is FREE!*** The portal is open to the public, and can be accessed at the following URL:

***<https://www.sibrium.org/CoinFinds/>***

# The web portal

*Two main sections:*

## ***Coin finds***

*Area dedicated to the recording of minimal data related to any coin find, from the great hoard to the single find*

## ***Bibliography***

*List of publications presenting coin finds or mentioned in the «Coin finds» section, with a short abstract*

Data can be entered ***in any language*** (Italian, English, French, German and Spanish are preferred), with ***no constraints*** about their completeness.  
All the entered data can be re-edited / revised / deleted (\*) in any moment.

*(\*) only **admins** can delete records*

## A fixed *record id*

Each coin find, or publication dealing with coin finds, is stored into an autonomous record, with a ***fixed record id***, that cannot be changed during any future editing of the record itself and can be used as a ***reference for quotations***.

## Ready for Linked Open Data (LOD)

Every record has a **stable URI** (Uniform Resource Identifier) based on the ***fixed id*** that makes the web portal ready for integration into the world of **Linked Open Data**

**<https://sibrium.org/find/{id}>**

**<https://sibrium.org/bib/{id}>**

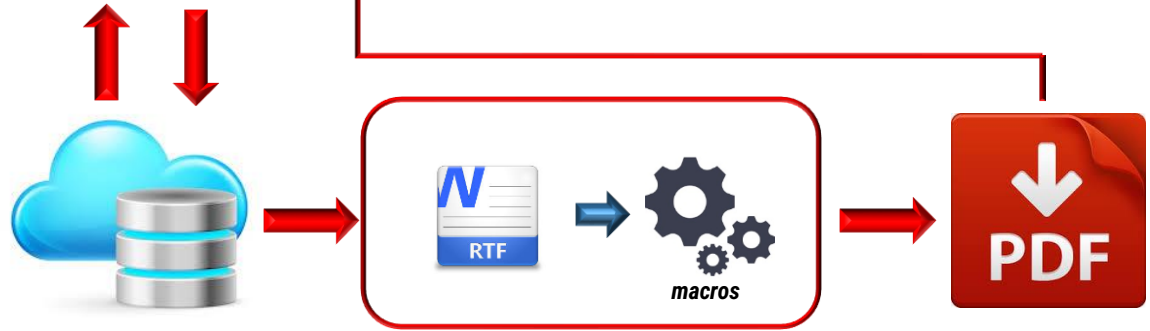

From  
dispersed data  
to organized  
information

*All the data are stored into a **remote database** that can be **easily accessed via web***

*The whole dataset is **exported twice a year** by the database administrator and automatically converted into **formatted PDF reports** distributed on the Internet*

*c. 10 minutes to export the full set of data into formatted PDF reports*

# Importing data from other databases

***Data from other databases can be easily imported starting from a CSV/XML file. Semi-automatic process based on data parsers***

# Credits

The project has been officially presented during the last ***International Numismatic Congress*** held in Taormina, Italy (September 21st-25th, 2015)

15th International Hamadonic Congress • Turin, September 2nd-5th 2015

# A collaborative inventory of coin finds

## A web-based architecture

Despite several relevant publications on finds of Greek and Roman coins, we still suffer the lack of similar works for the Medieval and Modern periods. The collection of data is often managed individually on very particular topics, leading to archives richer than public repositories. Consequently, the data remain fragmented in personal books and local journals, affecting negatively the study of the coin finds.

The idea of the web portal presented here to the public is to provide information about the coin finds and the related bibliography, without any pretensions of completeness or homogeneity based on a "Web" approach.

It consists in a free access web site where, among other, submitting, can be entered new data and correct or integrate records already existing.

The white list of the data is currently accessible on the internet at the following address: [www.stibnum.org/CoinFinds](http://www.stibnum.org/CoinFinds)

## The structure of the portal

The portal consists of a set of dedicated to the recording of data related to any coin find (1) and of a set of publications presenting coin finds, with a total of 141.

It includes search pages (2), areas for the find records (4), and specific sections for the general administration of the data (3), available to approved and contributor only.

Data can be entered in any language (Italian, English, French, German and Spanish are preferred, with no constraints about their complexities). The portal is based on a "best only" management of the information, using [www.stibnum.org](http://www.stibnum.org) to implement simple modifications of the find data.

The portal currently shows the data related to 1,500 coin finds and 4,500 bibliographic records, mainly related to Italian numismatic history of the Medieval and Modern times.

## Open data, open to data

Each section proposes a list of the records currently submitted. Entry, Marking and records are allowed by clicking on the drop-down list, and on the table headers (3). The details for each record are available by clicking on the corresponding row (4).

Each find, or paper, is stored into an administrative, fully informative record (4), with a fixed record (10). Editing or approval can be done by clicking on buttons displayed at the top of the page (11). The extensive flexibility and capacity of the portal allow a wide data exchange of data with other archives or CRMS (e.g. the current record from the Italian Catalogue of Manuscripts, ICM).

All the collected data in the portal are open, and can be exported in CSV format, which can periodically distributed for free on the Internet.

Additional information on the portal and its features:  
 - the portal is available for free;  
 - the portal is available for free;  
 - the portal is available for free;  
 - the portal is available for free;

# 2.

## The web portal

# Subscribing to the portal

Any registered user can enter new data or edit existing records. ***Subscription is free***, and automatically assigns a basic access level (***user*** level). An administrator can then increase the access level to grant the user the ***approval/admin*** rights.

The screenshot shows a web registration form. On the left, a vertical menu contains links: 'The project', 'List of coin finds', 'Bibliography', 'Search among finds', 'Search in the bibliography', and 'New user' (which is highlighted with a red rectangle). Below the menu is a Creative Commons license icon and a small red logo. In the center, there is a decorative image of various ancient coins. To the right of the image is a registration form with the following fields: 'First name (\*)', 'Last name (\*)', 'Institution/University', 'Address', 'City', 'ZIP code', 'Province/State', 'Country', 'E-mail address (\*)', 'Confirm e-mail (\*)', 'Password (\*)', and 'Confirm password (\*)'. The last four fields have small gray icons next to them. Below the form, there are two checkboxes: 'I read the cookies policy of the site' and 'I accept to contribute with data as accurate as possible'. At the bottom right, there is a 'Submit' button. A legend at the bottom indicates that (\*) denotes a mandatory field and (\*\*) denotes a field for letters and numbers, minimum 8 characters.

☐ I read the [cookies policy](#) of the site  
☐ I accept to contribute with data as accurate as possible

(\*) mandatory field  
(\*\*) only letters and numbers, min. 8 characters

**Submit**

## User access levels

**User:** he/she is allowed to enter new coin finds or new bibliographic records, and edit those already present (if not in *Locked* status); it represents the default access level for any new subscriber

**Approver:** besides entering and editing the data, he/she can approve or reject the records submitted by other users; **this level is assigned to a limited number of subscribers only**

**Admin:** he/she can fully manage the data and modify the role of the registered subscribers; **he/she has access to the files stored in the «Coin Finds» and «Bibliography» sections**

**A fourth level**, not directly related to the web interface, allows the **full database administration** (deleting/restoring of the records, massive uploading of data).

# Approval status

**Pending approval:** it is the status assigned by default to any new record, or after a modification; it refers to a record still waiting for the check or the approval by an *approver* or an *admin*

**Approved:** it is the status assigned to a record after getting the approval by an *approver* or an *admin*; it **reflects a higher level of reliability compared to the previous status**

**Locked:** an *admin* can prevent *users* e *approvers* from modifying the record by setting this status

Any subscriber can privately save records in **Draft** mode. These records can be accessed by the user itself and the *admins* only

*Approvers* and *admins* can reject records, putting them into **Rejected** status, thus removing them from the list of records publicly accessible

*Admins* can also permanently delete the records (**Deleted** status)

# Text mark-ups

The portal is based on a “text-only” management of the information, using mark-ups to implement simple modifications of the font style. The mark-ups can be nested.

|         |                      |
|---------|----------------------|
| (b)(/b) | for <b>bold</b>      |
| (i)(/i) | for <i>italic</i>    |
| (u)(/u) | for <u>underline</u> |

## *Example (with markups)*

(b)M. CHIMIENTI(/b), (i)Monete ritrovate nello scavo della Piazza XX Settembre di Castel San Pietro (1997-1998)(/i), in (i)La piazza, il passato, la storia. Archeologia a Castel San Pietro Terme(/i), a cura di (u)J. ORTALLI,(/u) 2001, pp. 128-137

## *(formatted, without markups)*

**M. CHIMIENTI**, *Monete ritrovate nello scavo della Piazza XX Settembre di Castel San Pietro (1997-1998)*, in *La piazza, il passato, la storia. Archeologia a Castel San Pietro Terme*, a cura di J. ORTALLI, 2001, pp. 128-137

# Text formatting

***Lists are automatically created*** in all the MemoBox fields of the *Coin finds* section and in the **Abstract/Notes** field in the *Bibliography* section by simply **typing '-' (1<sup>st</sup> level) or '--' (double '-'; 2<sup>nd</sup> level)** at the beginning of each row.

Lists will be displayed with a ***slight indentation*** on both the web pages and the PDF reports.

# Login

*A subscriber can login with the **username automatically generated** or **with the e-mail address communicated during the registration.***

**Basic filtering** (drop down lists) **or sorting** (clicking on the header of the desired column)

Presence of a file attached to the corresponding record (visible to admins only)

**Details on a single find are accessible by clicking on the corresponding row**

# The record

*Each find is described in a fully-informative record; its editing can be done by clicking on buttons displayed at the top of the page*

The screenshot shows a web interface for a coin find record. On the left is a sidebar with navigation links. The main content area displays the record details for 'record id: 6521'. At the top, there are buttons for 'Edit', 'Attach', 'Reject', 'Lock', and 'Delete'. The record is titled 'Italia | Liguria | La Spezia Sarzana, castello della Brina'. The 'Type' is 'Stray finds'. The 'Category' section includes checkboxes for 'tokens/jetons', 'monetary weights', 'non-numismatic objects', 'unclassified', 'Celtic', 'Greek', 'Greek (colonies)', 'Roman', 'Roman (provincial)', 'Byzantine', 'Early Medieval', 'Late Medieval', 'Modern', and 'other'. The 'Date of discovery' is 'scavi 2001-03 e successivi' and the 'Proposed dating' is 'XIII-XIV secolo'. The 'Description' mentions '10 esemplari sporadici in contesto di XIII secolo' and 'In indagini successive, monete di Pisa e Genova del XIV secolo'. The 'Bibliography' lists several publications. A 'Permalink' is provided at the bottom. A 'History of changes' section shows two entries: '01/04/2014 11:32:45 - Approved (l. gianazza)' and '31/03/2014 12:00:00 - Approved (l. gianazza)'. A 'go back to the list of finds' link is at the very bottom. Red lines with dots point to specific elements: 'Approval status' points to the 'Approved (l. gianazza)' text; 'Findspot' points to the location 'Italia | Liguria | La Spezia Sarzana, castello della Brina'; 'Fixed record id' points to 'record id: 6521'; and 'Type (deposit, hoard, purse, single find, stray finds, other, unspecified)' points to the 'Type: Stray finds' label.

**Approval status**

Die Geldbörse des «Söldners» vom Theodul- Pass (VS) - Il ripostiglio del «mercenario» del Colle del Teodulo (VS)
- Abbreviation:** DIAZ TABERNERO, GIANAZZA 2014
- Acronym:** No
- Place/Journal:** (Inventar der Fundmünzen der Schweiz 11), Bern 2014
- Abstract/Notes:** Nel 1994 furono scoperti da privati presso il Colle del Teodulo, a circa 3 000 metri di quota, i resti di un cadavere umano che era rimasto rinchiuso nel ghiacciaio. Fino all'inizio degli anni '90 del XX secolo vennero raccolti ossa umane, armi, monete, resti di mulo, gioielli in argento e svariati pezzi di vetro, legno, tessuto, metallo e cuoio venuti alla luce a seguito dello scioglimento dei ghiacci nella parte superiore del ghiacciaio del Teodulo. La localizzazione in uno spazio ristretto e una datazione dei materiali sostanzialmente omogenea consentono di porre in relazione il nucleo principale di questi oggetti con un singolo evento sfortunato, che ebbe come teatro il ghiacciaio a cavallo dei secoli XVI e XVII, come dimostrarono le 184 monete di una stessa lega, la maggior parte delle quali data alla seconda metà XVI secolo. Le armi scoperte vicino al corpo suggeriscono che fosse un soldato o un mercenario. Nove pezzi d'argento sono di grosso modulo (ducaton), conati quasi tutti a Milano. Le altre monete sono esemplari a basso tenore di argento prodotti in zecche dell'area piemontese-savoiarda. Nel ritrovamento si osserva una rilevante presenza di contrabbando di tipi milanesi e di Savoia. Monete provenienti dal nord delle Alpi non costituiscono che una piccola parte del ritrovamento.

Title (\*)  
Die Geldbörse des «Söldners» vom Theodul- Pass (VS) - Il ripostiglio del «mercenario» del Colle del Teodulo (VS)

Place/Journal  
(Inventar der Fundmünzen der Schweiz 11), Bern 2014

Abstract/Notes  
Nel 1984 furono scoperti da privati presso il Colle del Teodulo, a circa 3.000 metri di quota, i resti di un cadavere umano che era rimasto rinchiuso nel ghiacciaio. Fino all'inizio degli anni '90 del XX secolo vennero raccolti ossa umane, armi, monete, resti di mulino, gioielli in argento e svariati pezzi di vetro, legno, tessuto, metallo e cuoio venuti alla luce a seguito dello scioglimento dei ghiacci nella parte superiore del ghiacciaio del Teodulo. La localizzazione in uno spazio ristretto e una datazione dei materiali sostanzialmente omogenea consentono di porre in relazione il nucleo principale di questi oggetti con un singolo evento sfortunato, che ebbe come teatro il ghiacciaio a cavallo dei secoli XVI e XVII, come dimostrano le 184 monete di una borsa, la (\*) mandatory field

(S. Coupland, L. Gianazza)

The context of the Szeged-Óthalom find: carolingian coins in Hungarian graves and comparable coins in other contemporary hoards

Abbreviation: COUPLAND, GIANAZZA 2015  
Acronym: No

Place/Journal  
in Régészeti és természettudományi adatok a Maros-torkolat nyugati oldalának 10. századi történetéhez [Archäologische Daten und naturwissenschaftliche Ergebnisse zur Geschichte des 10. Jahrhunderts des westlichen Ufers der Muresch-Mündung] (Studia ad Archaeologiam Pazmaniensia 4), ed. by A. TÜRK, G. LŐRINCZY, A. MARCSIK, Budapest 2015, pp. 301-324

Abstract/Notes  
The paper examines the five Carolingian coins found in the Szeged-Óthalom hoard in their numismatic context, namely how they compare with other finds of Frankish coins in Hungarian graves of the early tenth century, including one found, remarkably, in south-eastern France. It also compares these five Italian deniers with other coins from the same period discovered in other contexts, including not only hoards concealed by Franks on the Continent but also others representing the loot taken by Scandinavian invaders, who were raiding the Carolingian kingdoms from a different direction at the same time. The analysis brings out a number of significant new insights, perhaps the most important being the reattribution of a number of the previously published Frankish and Italian coins found in other Hungarian graves.

S. COUPLAND, L. GIANAZZA, The context of the Szeged-Óthalom find: carolingian coins in Hungarian graves and comparable coins in other contemporary hoards, in Régészeti és természettudományi adatok a Maros-torkolat nyugati oldalának 10. századi történetéhez [Archäologische Daten und naturwissenschaftliche Ergebnisse zur Geschichte des 10. Abstract/Notes

Nel 1984 furono scoperti da privati presso il Colle del Teodulo, a circa 3.000 metri di quota, i resti di un cadavere umano che era rimasto rinchiuso nel ghiacciaio. Fino all'inizio degli anni '90 del XX secolo vennero raccolti ossa umane, armi, monete, resti di mulo, gioielli in argento e svariati pezzi di vetro, legno, tessuto, metallo e cuoio venuti alla luce a seguito dello scioglimento dei ghiacci nella parte superiore del ghiacciaio del Teodulo. La localizzazione in uno spazio ristretto e una datazione dei materiali sostanzialmente omogenea consentono di porre in relazione il nucleo principale di questi oggetti con un singolo evento sfortunato, che ebbe come teatro il ghiacciaio a cavallo dei secoli XVI e XVII, come dimostrano le 184 monete di una borsa, la maggior parte delle quali data alla seconda metà XVI secolo. Le armi scoperte vicino al corpo suggeriscono che fosse un soldato o un mercenario. Nove pezzi d'argento sono di grosso modulo (ducatoni), conati quasi tutti a Milano. Le altre monete sono esemplari a basso tenore di argento prodotti in zecche dell'area piemontese-savoiana. Nel ritrovamento si osserva una rilevante presenza di contraffazione di tipi milanesi e di Savoia. Monete provenienti dal nord delle Alpi non costituiscono che una piccola parte del ritrovamento.

## Managing the records

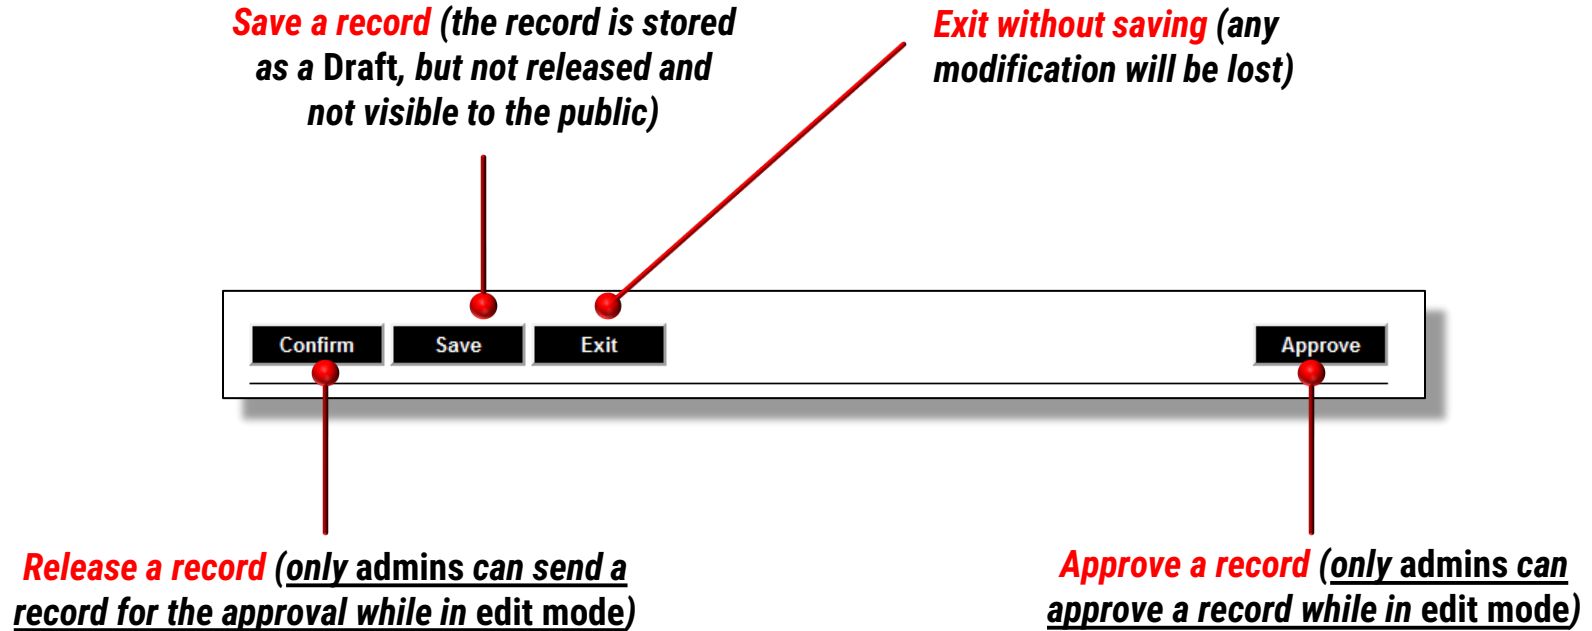

# Changing the approval status

Records can be ***edited, approved, saved as draft, locked, rejected, deleted***, according to the access level of each user.

# The *Edit* mode

## Releasing a record

Once a record is **Saved**, it is stored in the personal *Draft* area.

***It is not released yet, i.e. it is owned by its author only and not visible to the public.***

***It can be edited, and saved again, any time is needed.***

***To release a record***, thus making it visible to everyone, it is necessary to click on the **Confirm** button

While in *Draft* status, a record cannot be accessed by other users, except by *admins*.

*Admins* may act on records in *Draft* status, by changing their approval status and thus making them accessible again to the public.

# Releasing a record

**Enter the edit mode**  
(edit the record again)

**Approve a record** (only approvers and admins can approve a record while in Draft status)

The screenshot shows a web interface for managing a coin find record. On the left is a sidebar with navigation links. The main content area displays the record details for 'record id: 23'. At the top of the main area, there are two buttons: 'Edit' and 'Attach'. To the right of these buttons, there are four buttons: 'Approve', 'Reject', 'Lock', and 'Delete'. A red arrow points from the 'Approve' button to the text 'Approve a record' above the screenshot. Another red arrow points from the 'Edit' button to the text 'Enter the edit mode' above the screenshot. A red box highlights the 'Approve' button, and a red arrow points from the text 'Approve a record' to this box. A red box also highlights the text 'Pending approval (I.gianazza)' in the top right corner of the record details area, with a red arrow pointing from the text 'Approve a record' to this box. The record details include the location 'Austria Salzburg/Salisburgo', the type '(unspecified)', and a category section with various checkboxes. The 'Date of discovery' and 'Proposed dating' are both listed as 'n.s.'. The description is 'Dramma venetica AR tipo XIX'. The bibliography lists '[PIANA AGOSTINETTI 1996/3], p. 314, senza numero.'.

J. DIAZ TABERNERO, L. GIANAZZA, *Die Geldbörse des «Söldners» vom Theodul- Pass (VS) - Il ripostiglio del «mercenario» del Colle del Teodulo (VS)*, (Inventar der Fundmünzen der Schweiz 11), Bern 2014

Nel 1984 furono scoperti da privati presso il Colle del Teodulo, a circa 3.000 metri di quota, i resti di un cadavere umano che era rimasto rinchiuso nel ghiacciaio. Fino all'inizio degli anni '90 del XX secolo vennero raccolti ossa umane, armi, monete, resti di mulo, gioielli in argento e svariati pezzi di vetro, legno, tessuto, metallo e cuoio venuti alla luce a seguito dello scioglimento dei ghiacci nella parte superiore del ghiacciaio del Teodulo. La localizzazione in uno spazio ristretto e una datazione dei materiali sostanzialmente omogenea consentono di porre in relazione il nucleo principale di questi oggetti con un singolo evento sfortunato, che ebbe come teatro il ghiacciaio a cavallo dei secoli XVI e XVII, come dimostrano le 184 monete di una borsa, la maggior parte delle quali data alla seconda metà XVI secolo. Le armi scoperte vicino al corpo suggeriscono che fosse un soldato o un mercenario. Nove pezzi d'argento sono di grosso modulo (ducatoni), conati quasi tutti a Milano. Le altre monete sono esemplari a basso tenore di argento prodotti in zecche dell'area piemontese-savoiarda. Nel ritrovamento si osserva una rilevante presenza di contraffazione di tipi milanesi e di Savoia. Monete provenienti dal nord delle Alpi non costituiscono che una piccola parte del ritrovamento.
