(H) località imprecisata, n.s. (ante 1956) (dep.: c. 1285)

Ripostiglio, 34 denari MI di Messina: 2 di Enrico VI di Svevia, 2 di Federico II di Svevia, 5 di Corrado, di Corradino, 11 di Manfredi, 13 di Carlo I.

Si tratta del cosiddetto “Cambridge hoard”.

Bibl.: TRAVAINI 1993, pp. 97-99; MEC 14, pp. 415-416 n. 13.

Id.: 8575

Tags: Late Medieval

(H) località imprecisata, 1970 (?) (dep.: ante 1166)

Ripostiglio, costituito da gruppo di 227 *tarì* AV da Ruggero I a Guglielmo I.

Bibl.: TRAVAINI 1985; TRAVAINI 1995, pp. 105, 365; MEC 14, p. 419 n. 61.

Id.: 8612

Tags: Late Medieval

(H) località imprecisata, 1970 (?) (dep.: c. 1197)

Ripostiglio, con gruppo di 113 *tarì* AV, normanni da Ruggero I a Guglielmo III, e svevi di Enrico VI.

Bibl.: TRAVAINI 1985; MEC 14, p. 420 n. 62.

Id.: 8613

Tags: Late Medieval

(uns) località imprecisata, n.s. (ante 1986) (dep.: post 1322)

Acaia, tornese 240.

Cons.: New York, American Numismatic Society (dal 1986).

Bibl.: BAKER 2001, nota 43 (cita); CECCHINATO 2010, p. 127.

Id.: 3

Tags: Late Medieval

(H) località imprecisata, n.s. (dep.: n.s.)

Ripostiglio di provenienza ignota, con almeno 33 monete coniate tra il regno di Carlo II d’Angiò e quello di Federico II d’Aragona.

Bibl.: DOLLEY 1953.

Id.: 6

Tags: Late Medieval

(H) località imprecisata, n.s. (ante 1997) (dep.: prima metà/metà XIII secolo)

Si tratta di un tesoro, il cui luogo di rinvenimento è sconosciuto (o comunque non reso noto), giunto in unico lotto presso la casa numismatica Van Elsen nel 1997.

Questo gruppo di monete potrebbe fare parte di un tesoro più grande (più di un migliaio di pezzi), giunto sul mercato numismatico italiano e proveniente dalla Corsica, senza che fosse possibile avere un'ulteriore specificazione dell'area esatta dell'isola. I materiali numismatici disponibili sul mercato antiquario nel 1997-1998 sono oramai dispersi. Gli esemplari osservati da M. Baldassari in foto presentavano la leggenda con CVNRAD •REX e CVNRAD •REX• talvolta con segno di cuneo nei quarti.

Composizione: 315 denari genovesi, di cui 33 con porta turrita *rough* e leggenda CVNRAD REX (tipo Metcalf I), talvolta con punti nel primo quarto del rovescio e nel campo del dritto; 72 con porta turrita *regular* e leggenda CVNRAD REX (tipo Metcalf II); 62 con porta turrita *neat* e leggenda CVNRAD REX (tipo Metcalf IIIa); 46 con porta turrita *neat*, leggenda CVNRAD REX ed un cuneo nel secondo quarto (tipo Metcalf IIIb); 83 del tipo porta turrita *neat* e leggenda CVNRAD •REX (tipo Metcalf IIIc), raramente con globetto sotto la porta al dritto; 16 con porta turrita del tipo *neat* e leggenda CVNRAD •REX• (tipo Metcalf IIId); 3 con porta turrita del tipo *neat*, leggenda CVNRAD •REX• e cuneo nell'ultimo quarto (tipo Metcalf IIIE).

MEC 12, p. 692: *similar to the London parcel but with higher percentage of older types* [of Genoese denari].

V. anche ritrovamento n. 8.

Cons.: Disperso.

Bibl.: GRAFF 1999; BALDASSARRI 2009, pp. 355-356; MEC 12, p. 692 n. 108 (come *Elsen parcel*).

Id.: 7

Tags: Late Medieval

(H) località imprecisata, n.s. (dep.: metà XIII secolo (per MEC 12, p. 693: anni Quaranta del XIII sec.))

Si tratta di un tesoro giunto in lotti diversi sul mercato londinese da provenienza sconosciuta (o comunque non resa nota), edito nel 1977.

Composizione:

- per BALDASSARRI 2009, p. 356: 725 pezzi, di cui 600 denari di Genova, di XII e XIII secolo; 118 denari scodellati di Milano e di Brescia, di XII secolo e post 1186; 3 denari scodellati di Cremona; 2 denari di Siena, post 1192; 1 denaro siciliano per Enrico VI, 1194-1197; 1 mezzanino di Cremona. Tra i denari genovesi: 8 con porta turrita *rough* e leggenda CVNRAD REX (tipo I); 57 con porta turrita *regular* e leggenda CVNRAD REX (tipo II); 64 con porta turrita *neat* e leggenda CVNRAD REX (tipo IIIa); 99 con porta turrita *neat*, leggenda CVNRAD REX ed un cuneo nel secondo quarto (tipo IIIb); 284 con porta turrita *neat* e leggenda CVNRAD •REX (tipo IIIc); 49 con porta turrita del tipo *neat* e leggenda CVNRAD •REX• (tipo IIId); 32 con porta turrita del tipo *neat*, leggenda CVNRAD •REX• e cuneo nell'ultimo quarto (tipo IIIE).
- per MEC 12, p. 693: c. 718 MI recorded from different lots on the coin market in London
 - Brescia, 3 denari mezzani (1184-c. 1240);
 - Cremona, 4 denari inforziati piani (1 databile al 1165-c. 1230, 3 al 1184-c. 1230);
 - Genova, c. 594 denari (databili tra il 1139 e gli anni Quaranta dl XIII sec.);
 - Milano, probabilmente 115 denari (alcuni vecchi denari enriciani databili al 1039-c. 1100; principalmente denari terzoli, 1167-c. 1240);

- Siena, 2 denari (post 1192);
- Messina, 1 denaro (Enrico VI e Costanza, 1194-97).

V. anche ritrovamento n. 7.

Bibl.: METCALF 1977; BALDASSARRI 2009, p. 356; *MEC* 12, p. 693 n. 119 (come 'London parcel'); RIZZONELLI 2021, p. 291 (cita in riferimento al ritrovamento di Cisano Bergamasco – n. 6571 – dando in nota 43 una breve descrizione e parlando di una composizione originaria di oltre 700 es.).

(uns) località imprecisata (Crô di Savoyard), n.s. (dep.: post 1676)

Dal catalogo del Musée Vaudois – oggi Museo Valdese – di Torre Pellice, risulta conservata presso il museo una *monnaie de Victor Amédée mineur et de la régente sa mère, Marie J. Bapt. de Savoie-Nemours, 1676, 20 soldi. Trouvée au Crô di Savoyard, où étaient placés les canons qui battirent la Balsille en 1690. (Don de M. David Peyrot).*

Cons.: Torre Pellice, Museo Valdese.

Bibl.: ANONIMO 1927, p. 32.

Id.: 9697

Tags: Modern

(H) località imprecisata (Europa sud-orientale), n.s. (ante 1991) (dep.: fine XII – inizio XIII sec.)

In circostanze non meglio precisate, ripostiglio con 5.482 MI, forse proveniente dall'Europa sud-orientale, acquistato dal commerciante americano John Ajello.

Composizione:

- Verona, 5.479 denari crociati (ante 1185-c. 1250);
- Venezia, 2 denari (Orio Malipiero, 1178-92);
- Trento, 1 denaro (1177-c. anni '90 del XII sec.).

Non è chiaro se i 5.482 esemplari recuperati rappresentino l'intero ripostiglio o solo una parte di esso.

Bibl.: Inedito. *MEC* 12, p. 697 n. 142 (*unpublished, examined by authors*).

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(H) Fohregg, 2009 (*dep.*: post 1533)

Coin hoard from Fohregg (Lower Austria), finishing with the year of 1533 and found in 2009, presenting about 3,900 Hungarian deniers. This hoard is unique in Lower Austria and it differs dramatically from Hungarian hoards with a similar dating.

Composition:

- Hungary
 - Matthias I Corvinus (1458-1490), 5 pennies (0.1 %);
 - Wladislaus II (1490-1516), 37 pennies (0.9 %);
 - Ludwig II (1516-1526), 156 pennies (4.0 %);
 - Johann Zápolya (1526-1540), 13 pennies (0.3 %);
 - Ferdinand I (1526-1564), 3,567 pennies (91.4 %);
- Zrinyi
 - Nikolaus III († 1534), 108 pennies (2.8 %);
- Aquileia
 - Antonio II (1402-1412), 13 *denari/soldi* (0.3 %);
 - Ludovico IV (1412-1439), 5 *denari/soldi* (0.1 %);
- Sachsen
 - Johann und Georg (1525-1528), 1 *Zinsgroschen*;
- Polen
 - Alexander (1501-1506), 1 *Halbgroschen*.

(H) Hadersdorf am Kamp, novembre 1918 (dep.: VII sec.)

Nell'anno 1918 fu scoperto un tesoro di monete in un campo vicino a Hadersdorf am Kamp (Bassa Austria). Le sette monete trovate – tutte frazioni di siliqua – presentavano monogrammi sconosciuti.

Secondo lo stato attuale della ricerca, le monete ritrovate dovrebbero essere monete longobarde del VII secolo realizzate in una zecca dei ducati di Trento o del Friuli.

Ricerche recenti presso il Münzkabinett di Berlino hanno portato alla luce altre cinque monete che presumibilmente sarebbero da ricondurre alla stessa scoperta del 1918.

Discovery of the find: fortuitous discovery, unknown circumstances

Nature of the site at the time of concealment or loss: rural settlement (vicus, villa rustica, shelter,

(H) Hafning, Flur Tobel im Wald, 2008-09 (dep.: post 1486)

Etwa im Jahr 2008 oder 2009 wurde in der Flur Tobel in Hafning (KG Hafning, Gemeinde Wartmannstetten, Verwaltungsbezirk Neunkirchen, Niederösterreich) im Wald ein Münzfund gehoben, der im Jahr 2012 im Institut für Numismatik und Geldgeschichte der Universität Wien vorgelegt wurde. Hier wurden die Münzen bestimmt, dokumentiert und fotografiert, so dass der Fund auch in Zukunft für Forschungsfragen zur Verfügung steht – auch wenn die Münzen selbst dann vielleicht nicht mehr greifbar sein sollten.¹⁶⁹ Bei der Aufindung gab es offenbar keine Hinweise auf ein Fundgefäß.

Unter den Münzen waren zerbrochene Stücke und auch größere wie kleinere Fragmente. Von diesen konnten einige wieder mit anderen zusammengefügt werden; trotzdem blieben einige Münzen unvollständig. Diese Beschädigungen sollen bei der Aufindung bereits vorhanden gewesen sein; sie dürften also nicht erst bei der Reinigung der Münzen nach der Hebung des Fundes entstanden sein. Sollten die Münzen jedoch teilweise in zerbrochenem Zustand deponiert worden sein, so wäre anstelle einer Barschaft vielleicht eher von einem Edelmetalldepot zu sprechen.

Insgesamt konnten 64 Münzen erfasst werden, zu denen noch ein kleines Häufchen kleinster, nicht zuweisbarer Fragmente hinzutritt. Dieser Bestand soll den vollständigen Fund darstellen. Die Schlussmünze von 1486 (Kat.-Nr. 8) stellt für die Deponierung einen terminus post quem dar; die Fundverbergung fand also vielleicht in den späten 1480er oder frühen 1490er Jahren statt. Gemeinsam mit den Münzen wurde ein Kreuzer des Bistums Chur vorgelegt, der fast 100 Jahre jünger ist und somit sicher nicht zum Fund gehört. Da es sich bei diesem seltenen Stück aber wohl auch um eine Fundmünze aus dem südöstlichen Niederösterreich handeln wird, wird dieses Stück hier im Anhang ebenfalls publiziert.

Münzstätte: Wien, Wiener Neustadt, Meran oder Hall, Graz, Hall, Lienz, Kremnitz, Buda, Nagybanya, Aquileia oder Udine (*soldi* Antonio II. Panciera (1402-1411), Lodovico II. di Teck (1412-1420/1437)), Chur.

(H) Krems an der Donau, 30 ottobre 1878 (dep.: post 1349)

Ripostigliottra venuto alla luce il 30 ottobre 1878 tra le città di Krems e Stein (Austria), rinvenuto nella terra in un luogo che presumibilmente era un cimitero ebraico composto da 37 AV, tra cui 3 fiorini AV con legenda *FLORENTIA*.

De Benetti (2091a, p. 302) riconosce 2 fiorini AV della zecca di Firenze:

- periodo dei maestri di zecca sconosciuti (1252-1303)
 - ca. 1291-1299 (arco): 1 es.
- periodo dei maestri di zecca prevalentemente conosciuti (dal 1303/II)
 - 1330/II (tanaglie): 1 es.

È inoltre documentato un fiorino del 1322/I (non verificabile).

Cons.: In gran parte conservato presso il Muzeum Mistelbach di Asparn/Zaya (Austria).

Bibl.: HAHN 1981; DE BENETTI 2019a, n. 23; DE BENETTI 2024, n. 24 (tabelle 7 e 9; appendice E).

Nature of the site at the time of concealment or loss: castle / fortress

(H) Lauterach, a ovest, 1868 (dep.: c. 898-915, o 840-55)

Da una torbiera a ovest di Lauterach, ripostiglio con 18 denari AR:

- 15 denari AR, Lotario I (840-55), zecca di Milano;
- 2 denari AR, Lotario I (840-55), zecca di Pavia;
- 1 denaro AR, Berengario I re (c. 898-915), zecca di Milano;

Segnalato anche 1 denaro AR di Ottone I (962-73), zecca di Milano, intrusivo.

Per ZÄCH, DIAZ TABERNERO (2002) il ripostiglio sarebbe costituito dai soli 17 denari di Lotario, con presenza dei due denari posteriori – dunque, anche quello di Berengario – a carattere intrusivo. Se accettata, questa ipotesi obbliga ad anticipare il probabile periodo di occultamento all'840-55.

(H) Mondsee, 1975 (*dep.:* c. 1395 (per STAHL 2000, p. 437) o post 1406 (per EMMERIG 2009, p. 183))

Ripostiglio, con 6.637 monete AV+AR+MI in totale – principalmente di Austria e Baviera – e 4 anelli. Composizione:

- 6.314 *pfennige*;

- 181 *Tiroler Kreuzer*;
- 106 grossi di Praga a nome di Venceslao IV;
- 22 *goldgulden* ungheresi;
- 9 ducati AV di Venezia: 1 di Francesco Dandolo, 1329-39; 2 Andrea Dandolo, 1343-54; 4 Andrea Contarini, 1368-82; 1 Michele Morosini, 1382; 1 Antonio Venier, 1382-1400;
- 1 imitazione AV di ducato veneziano;
- 6 ducati del Senato Romano, zecca di Roma.

Per EMMERIG 2009 datazione a post 1406 sulla base, tra l'altro, di un *pfennige* di Leopoldo IV e Albrecht IV d'Austria. Possibile presenza di monete d'oro addirittura posteriori.

Bibl.: KOCH 1976; BESLY, WOODHEAD 1978, p. 132 n. 410; EMMERIG 1993, p. 305 n. 258; STAHL 2000, p. 437 n. 36 (data a c. 1395); EMMERIG 2009, p. 183 n. Ö21 (FK/ING 101259; data a post 1406).

(H) Oberhofen am Irrsee, loc. Rabenschwand, 1904 (per EMMERIG 2009, p. 186) o 1904-05 (per MEC 12, p. 695) (*dep.:* post 1441)

Ripostiglio, con c. 12.000 AV+AR+MI, di cui oltre 10.000 identificati:

- 9.538 *pfennige*;
- 814 *Tiroler Kreuzer*;
- 15 contraffazioni del *Tiroler Kreuzer* provenienti da zecche italiane;
- 43 grossi di Praga;
- 1 grosso di Milano;
- 9 oppure 15 *goldgulden* ungheresi.

Notati in particolare per l'area italiana:

- Incisa, 2 grossi tirolini (ante 1311);
- Ivrea, 3 grossi tirolini (ante 1311);
- Mantova, 8 grossi (2 grossi tirolini, c. 1311; 2 grossi aquilini attribuibili a Rinaldo Bonaccorsi, 1309-28, conati nel 1320-28; 4 grossi aquilini nuovi, c. 1349-69);
- Merano, 672 grossi (530 a nome di Mainardo II, 1274-1306; 1 Rodolfo IV, 1363-65; 48 Leopoldo III, 1365-86; 21 Alberto III, 1386-95; 72 Leopoldo IV, 1395-1411);
- Milano (?), 1 grosso (segnalato come di Galeazzo II Visconti, 1354-78, ma per MEC 12, p. 695 più probabilmente pegione di Gian Galeazzo Visconti, 1378-1402);
- Padova, 1 grosso aquilino (1320-24);
- Verona, 1 grosso aquilino (1349-78).

Datazione – dubitativa – del complesso a post 1406 sulla base di alcuni *pfennige* con l'iniziale del principe di Baviera, oppure a post 1441 sulla base di alcuni *pfennige* di Augsburg su cui sembrerebbe comparire il segno di zecca del maestro Johann Stephan Grässling, attivo nel 1441. Per MEC 12, p. 695 n. 127 post 1441.

AZERBAIJAN

(H) **unknown**, spring 2013 (*dep.*: late AH 420s / AD 1030s)

A hoard of billon dirhams struck by the rulers of the Shaddādīd and Shirwānshāh dynasties and by Kwirike III king of Kakheti-Hereti in eastern Georgia was found in the Republic of Azerbaijan in the spring of 2013. The find spot is unknown, as is the total number of coins in the hoard, though there were said to be about 200 pieces altogether. VARDANYAN, ZLOBIN 2014 were able to obtain photos of 93 coins that recently appeared at one of the markets in Baku. These were as follows:

- Shaddādīds – 52 coins
 - Faḍl I ibn Muḥammad (AH 375-422 / AD 985-1031): 44 coins;
 - Mūsā ibn Faḍl I (AH 422-5 / AD 1031-4): 1 coin;
 - ‘Alī al-Lashkarī II (AH 425-40 / AD 1034-9): 7 coins;
- Shirwānshāhs – 36 coins
 - Yazīd ibn Aḥmad (AH 381-418 / AD 991-1028): 1 coin;
 - Abū al-Hayjā Manūchihr ibn Yazīd (AH 418-25 / AD 1028-34): 3 coins;
 - ‘Alī ibn Yazīd (AH 425-35 / AD 1034-43): 32 coins;
- Kakheti Hereti Kings – 1 coin
 - Kwirike III (AD 1014-37/9): 1 coin
- Uncertain – 4 coins

The oldest coins in the available part of hoard cannot be determined since the date on most of them is either missing or illegible. The oldest are probably those of the Shaddādīd ruler, Faḍl I and the Shirwānshāh, Yazīd ibn Aḥmad struck after AH 381 since there were no coins citing the Abbāsīd caliph al-Ṭā’i’ (AH 363-81). Since we do not have the whole hoard we cannot be certain about the date of deposition but would tentatively suggest that it was buried after AH 425, most probably in the late AH 420s / AD 1030s. The absence of coins struck by the Shirwānshāh, Sallār ibn Yazīd (445/1053) indicates that it was buried before 445.

(H) Flostoy, April 1883 (dep.: c. 1290-95)

The hoard was found by workmen on the land of Baron de Garcia de la Vega in April 1883. It was published the same year by two authors whose names were represented only by their initials. According to their description it contained 730 coins comprising silver gros tournois, Brabantine sterlings and billon pennies. The Baron presented it to the Archaeological Society of Namur. In 1966 the hoard was sent to Brussels for cataloguing and detailed publication. By then it contained only one silver coin and 664 billon pennies. Both Haeck and Duplessy date its deposition to c.1290-4.

By far the largest element was French royal tournois pennies.

Cons.: In trade.

(H) Profondeville, n.s. (dep.: V sec. d.C.)

Small hoard of 11 AV *solidi*, minted between 364 and 402 (or 408), discovered in Profondeville, Belgium, in the hills dominating the left bank of the river Meuse. The distribution of deposits in North-western Gaul, in the period from 380 to 480 CE, containing late-Roman gold shows the economic and/or military importance of the middle and lower portions of the Meuse valley in Late Antiquity.

BULGARIA

(oth) Ahyolu kaza, n.s. (dep.: XVI-XVII secc.)

On the territory of the Ahyolu kaza numerous single-coin finds and several coin hoards were found, the latest buried in the end of the 16th and early 17th centuries. These coins are now scattered in several museums (in Burgas, Pomorie, etc.). The treasures commented in KRASTEV 2014 are 10:

- From the village of Kamenar: 4 gold (sultanis) and 30 silver Ottoman and European coins;
- From the Paleokastro locality (near the town of Pomorie): 605 silver coins (552 Ottoman and 53 European);
- From the town of Pomorie: 9 European silver coins (8 thalers and one coin of ½ thaler);
- Unknown location: 5 Ottoman copper mangirs;
- Unknown location: 38 Ottoman silver coins;
- From the village of Krastina: 47 European silver coins;
- From the village of Rudnik: 124 European silver coins;
- Unknown location: 5 Ottoman copper mangirs;
- Treasure of Ahtopol: 448 silver (337 Ottoman and 111 European) coins;
- From the village of Gorno Yabalkovo: 11 Russian silver coins.

The total number of the coins in these hoards is 1319. Most of the treasures were hidden in the first half of the 17th century, probably related to the Cossacks' raids along the coast of the Bay of Burgas.

In all 10 coin-hoards there are specimens of several metals – 4 gold, 10 copper and 1366 silver coins. The most of the coins are Ottoman – 933 (4 gold, 919 silver, and 10 copper) coins. The most of them are from the reign of Sultan Ibrahim I (1640-1648) – 318 silver coins. The rest of the countries presented in these treasures are: The Netherlands (127 coins), Rzeczpospolita Polska (69 coins), Holy Roman Empire (58 coins), Habsburg Spain (41 coins), Kingdom of France (25 coins), Archduchy of Austria (15 coins), Republic of Ragusa (13 coins), Russia (12 coins), Duchy of Lorraine (8 coins), Brandenburg-Prussia (8 coins), Grand Duchy of Tuscany (5 coins), Kingdom of Hungary (1 coin), Principality of Transylvania (1 coin), Duchy of Urbino (1 coin), Papal state (1 coin), and Crimean khanate (1 coin) (Table 1). The European coins in all treasures are 386.

(oth) Mesembria / Nesebăr / Nessebar, n.s. (dep.: n.s.)

273 monnaies provenues des trouvailles isolées et des trésors trouvés à Méssembria pontique. La plupart sont monnaies byzantines, dont: 45 monnaies des VIe-VIIe ss., qui s'arrêtent sous Léontius, 5 ex. des IXe-Xe ss., de Théophile à Constantin VII et Zoé, follis anonyme classe A 1 – 1 ex., classe A 2 – A 3 – 20 ex., classe B – 23 ex., dont 18 font partie d'un trésor, classe C – 5 ex., classe D – 3 ex., classe E – 2 ex., classe I – 1 ex., Constantin X et Éudocie – 1 ex., Michel VII – 1 ex., Jean II – 1 ex., Manuel Ier – 9 ex., Isaac II – 4 ex., Alexis III – 3 ex., imitations bulgares – 3 ex., imitations latines, Cple – 18 ex., Thess. – 2 ex., Empire de Nicée – 5 ex., Empire de Thess. – 2 ex., Empire byzantine restauré – 6 ex. Les trouvailles de Méssembria comptent aussi émissions de l'Épire – 1 ex. (XIVe s.), de Venise – 1 ex. (L. Tiepolo) et de la Bulgarie – 108 ex., dont 102 font partie d'un trésor. Il faut noter que l'identification de certaines pièces est erronée, voir le no 47, n'est pas une émission d'un atelier d'Italie méridionale, mais une ½ follis de Léontius, frappé à Cple, les nos 52-71 ne sont pas émissions de Jean Ier ou leur "imitations" (?!), mais folles anonymes classes A 2 – A 3, le no 72 est un follis anonyme classe A 1 et non classe A 3, comme pourrait resulter du refference à *DOC* III 2 p. 666, A 2. 39. 4, le no 89 n'est pas un follis de Nicéphore III, mais de Michel VII, peut-être une pièce coulée, le no 91 n'est pas un follis ... de Jean II, mais un staménon et la monnaie du no 111 est une imitation latine Cple au petit module type A et non au grand module. Malgré ces remarques, le livre de E.T.S. est une des plus importantes contributions parrue jusqu'à présent sur les trouvailles monétaires des VIe-XIVe ss. en Bulgarie.

(P) Holičky, maggio 2016 (*dep.*: c. 1618-22)

Nel maggio 2016, rinvenimento iniziale di sei monete d'argento dispersi insieme con i resti di una borsa di pelle su una superficie di circa due metri quadrati. Durante una successiva ricerca archeologica è stata ritrovata un'altra moneta e alcune piccoli frammenti, che hanno portato il numero totale di pezzi rinvenuti a 10. La moneta più tarda è un pezzo da 3 kreuzer 1618 della Slesia.

Composizione:

- 2 monete della Slesia;
- 4 monete tedesche;
- 2 monete svizzere;
 - da 3 kreuzer 1597, zecca di Schaffausen;
 - da 3 kreuzer 1606, zecca di Zug.

L'assenza di esemplari locali ha spinto a ipotizzare che il proprietario delle monete potesse essere un mercenario impegnato nelle prime fasi della Guerra dei Trent'anni, tra 1618 e l'inizio dell'anno 1622, quando il presidio di stanza presso la città di Třeboň, a circa 5 km dal luogo di scoperta dei materiali, capitolò.

(H) Knínice, nearby, 2012 (dep.: end XIII – begin XIV century)

During an amateur detector prospecting in 2012, a repository of period forgeries of the parvus coins of Wenceslas II. was found. The finding took place in the cadastral area of the Knínice municipality in the Ústí region. In the medieval times the important crossborder “Serbian Trail” led through this area. The repository consists of two coin sets, one of which was obtained for documentation in its entirety (66 coins and their fragments), of the other one nine pieces were captured.

The sample of the coins was subject to an EDS analysis and a hydrostatic test.

(H) Rokycany, autunno 1998 (dep.: XV secolo)

In autumn 1998, a hoard of 90 grossi produced under Charles IV (one piece) and Wenceslas IV (89 pieces) was found in Rokycany during the archaeological excavations. The coins were wrapped in a fragmentary preserved piece of cloth. For sure, the group represents a deliberately sorted sum of one and a half of threescore of the Prague grossi in rough coins. The grossi of the group no. XIV (43 pieces) form the main part of the hoard, i.e. the coins of the final part of the Wenceslas IV's rule. It is possible to suppose that the hoard was buried after the death of Wenceslas IV, i.e. after 1419. This evidence is possible to be clearly confronted with the written sources – on July 22, 1421, Rokycany was burned down by the Pilsen army. It is possible to connect the burial of the hoard with this event. During the archaeological excavations, four single found coins were registered there. One of them was attributed as a Rhenish gulden struck in Frankfurt am Main under the Roman Emperor Friedrich III.

(SiF) Skalice/Skalica, 1980s (*dep.*: c. 1241-42)

In the 1980s, an interesting Austrian pfennig from the 13th century was found in the centre of Skalice. Based on written sources, we can assume that they began to circulate around 1264 or in the first half of the rule of Přemysl Ottakar II (1251-1276). However, other finds indicate their presence in the Hungarian lands as early as the first half of the 13th century. One of the most important finds which confirms this theory was discovered in Skalice. Alongside other coins, it also contained 277 specimens of the coins as described above. The majority of coin hoards dating from the first half of the 13th century, like the Skalice find, might have been hidden at the time of the Mongol incursions from 1241 to 1242. The Leopold VI pfennig was minted between 1210 and 1230, from when there are several interesting written sources concerning the town. The first written reference to the town dates from 1217.

(H) Bjerndrup, gennaio 2018 (*dep.*: c. 910)

A Bjerndrup, ovest di Kliplev, in un'area dalla quale sono emersi anche i resti di sei strutture abitative risalenti al X secolo, rinvenimento di 240 (?) monete e lingotti AR.

Esame dei materiali ancora in corso, nessun elenco esaustivo ancora pubblicato. Per il momento segnalati:

- svariati *dirham* arabi, parte dei quali tagliati;
- molte monete di Hedeby;
- 2 denari AR anglo-sassoni di Edward the Elder;
- 1 denaro AR St. Edmund memorial;
- 1 denaro AR d Lotario tipo con 2 linee), zecca di Dorestad;
- 1 denaro AR al tipo del tempio tetrastilo con XPISTIANA RELIGIO, imitazione di Lotario (?);
- 1 denaro AR di Carlo III di Francia detto il Semplice, zecca di Arras;
- 1 denaro AR di Luigi IV (?), zecca di Namur (?);
- 1 denaro AR di Luigi IV (?);
- 2 denari AR di Luigi il Fanciullo, zecca di Colonia;
- 4 denari AR di Luigi il Fanciullo, zecca di Strasburgo;
- 1 denaro AR di autorità incerta, zecca di Mainz;
- 2 denari AR di Carlo III di Francia detto il Semplice, zecca di Bruges;
- 2 monete danesi di Ribe;
- 4 denari AR di Ludovico III il Cieco, zecca di Milano (ma forse 2 da assegnare alla zecca di Venezia?);
- 2 denari AR di Lamberto, zecca di Pavia, di cui uno parziale in due frammenti;
- 2 denari AR di Berengario re d'Italia, serie con tempio tetrastilo, zecca di Milano (ma forse 1 zecca incerta?);
- 2 denari AR di Berengario re d'Italia, serie con tempio tetrastilo, zecca di Pavia;
- 2 denari AR con croce e tempio tetrastilo di incerta attribuzione ma di area italiana, molto probabilmente di Berengario re d'Italia, zecca di Milano;
- lingotti AR (2 o più da 5-6 kg, 1 da 7-9 kg).

Un ulteriore frammento di denaro AR (c. 1.5 cm), probabilmente Lamberto (poche lettere identificabili: forse (lamb)ERT(vs) su un lato, (x)PIS(tiana) sull'altro, zecca di Milano (?)) è stato rinvenuto a c. 200 metri dal restante gruppo di monete ed è stato successivamente giudicato estraneo al nucleo originale del ritrovamento.

Scoperta avvenuta a seguito di ricerca amatoriale a cura di Kenny Thygesen di Holbæk, che ha trovato la prima moneta d'argento scandagliando il terreno con il metal detector insieme ai suoi due amici Karin Krag e Søren Winther Torbensen di Aabenraa.

Il *terminus post quem* è dato da un *dirham* del 910. La data di occultamento non sarebbe di molto posteriore al 910 in quanto non sono stati rinvenuti denari italiani a nome di Berengario re col *chrismon*.

(H) Grønnegade, Rudkøbing, Langeland, 1878 (dep.: 1675-79)

In 1878, the barber J.F. Valbum found a coin hoard while taking up a floor in his house in

Grønnegade Street, which lay close to the town hall in Rudkøbing on the Isle of Langeland. This led to the discovery of a hoard of 313 silver coins. The latest coins are three Danish pieces dated 1675. The hoard may have been buried during the Scanian War (1675-79). The coins weighed c. 5.6 kilograms and are registered as FP 444 in the Royal collection. Barber Valbum was rewarded with 570 Danish kroner. 16 coins were new to the collection, and 27 coins were kept because they were better specimens than the ones already in the collection. The 27 coins which were replaced and the remaining 270 hoard coins were considered duplicates and probably used for exchange according to the then practice. Only 14 or 15 of the coins in the Royal Collection (which are illustrated in MÄRCHER 2012) can today be attributed to the hoard. None of these belong to the group of high quality, more or less contemporary, counterfeits which were identified by Sven Aagaard though extensive die studies in the early 1990s.

Cons.: 14-15 coins preserved at The Royal Collection of Coins and Medals. The rest are dispersed.

Bibl.: MÄRCHER 2012.

(H) Hopballe (uncertain Danish location, perhaps between Vejle and Jelling in Jutland), 1839 (*dep.*: 1625)

In 1839 76 small silver coins were found by farmer Jens Olesen's son Mads Jensen about one meter below the surface when he was digging gravel near his father's farm in Hopballe. The Royal Collection kept 10 of the coins and returned the rest. The finder received two *rigsbankdaler* (half thalers) as a reward. Today, no coins in the collection can with certainty be ascribed to the hoard

which consisted of coins of the Danish king Christian IV (1588-1648) and the Dukes of Holstein. The latest coins were probably dated 1625.

Cons.: 10 or fewer coins probably preserved at The National Museum of Denmark, The Royal Collection of Coins and Medals. The rest are dispersed.

Bibl.: MÄRCHER 2012.

(H) Nordby, the isle of Samsø in the Kattegat, 1897-98 (dep.: 1673-79)

In 1897 and 1898 the smallholder Mikkil Pedersen found 15 silver coins on his property in Nordby on Samsø (land register no. 87), while digging in a former courtyard. The latest coins are three English pieces dated 1673 which have not been preserved. The hoard may have been buried during the Scanian War (1675-79). The 11 coins (c. 250 grams) which were found in 1897 lay in a small clay pot which has not been preserved; four coins (MÄRCHER 2012, nos. 1, 8, 12, 15, weight 100.8 grams) were found in 1898 and are considered part of the same hoard. They are now registered as FP 741 and FP 749 in the Royal collection. The finder was rewarded with respectively 25 and 10 and a half Danish kroner. Only five coins (MÄRCHER 2012, nos 1, 9-10, 13-14) were kept in the collection as the rest were probably considered duplicates and used for exchange. No coins were returned to the finder.

Cons.: Five coins preserved at The Royal Collection of Coins and Medals. The rest are dispersed.

Bibl.: MÄRCHER 2012.

(H) Nørremølle, 2006 (dep.: 1020/40)

In 2006 the greatest hoard ever was found by metal detector. Archaeological investigations show that the hoard was deposited in a vessel of Baltic Sea ware only a few meters from the remains of a burnt down house from the Viking Age.

The hoard consists of a heterogeneous group of coins and hacksilber buried around 1020/1030. The majority of the 1,194 coins are German, but there is also a large group of British coins, and a smaller group of Kufic, Scandinavian, and Bohemian coins. The hacksilber consists of 170 pieces of jewellery mainly from the Slavic area and 87 other objects such as ingots and melts.

Bibl.: INGVARSDON 2012.

Discovery of the find: discovery with metal detector

(H) Nyboder, Copenhagen, October 1872 (dep.: 1682-84)

This hoard was found in October 1872 by four workers digging on the property (land register no. 559) of the master builder R. Larsen at St Annæ Vester Kvarter, Nyboder in Copenhagen at the corner between Enhjørningsgade (now Sankt Pauls Gade) and St Pouls Church. The hoard contained 91 silver coins and was found about 15 to 16 centimetres below the floor of the previous house on the site. The coins were in an iron pot with brass bands and there were traces of a piece of cloth, which had been wrapped around the coins. The pot crumbled but some pieces of it, together with the coins, were sent to the Royal Collection and registered as FP 351. No further information about the pot seems to be preserved. The finders' reward was based on the coins' metal value:

- 51 kroner at 7 mark = 59 rigsdaler, 3 mark
- 39 half kroner at 3 mark and 8 skilling = 22 rigsdaler, 4 mark, 8 skilling
- 18 skilling at 1 mark and 8 skilling = 1 mark, 8 skilling
- Additional to round up the reward = 3 mark

Reward: = 83 rigsdaler.

Today, only four coins (nos 20, 43, and 82-83) in The Royal Collection can be ascribed to the hoard. The remainder were probably considered duplicates and used for exchange.

Cons.: Four coins preserved at The Royal Collection of Coins and Medals. The rest are dispersed.

Bibl.: MÄRCHER 2012.

(H) Nysted, Isle of Lolland, 1868 (dep.: c. 1725)

In 1868 a hoard of counterfeit European coins from 1594-1725 was found in a peat bog in Nysted Klostermark, east of Nystad on the Isle of Lolland, Denmark by the workman Hans Olsen. He was digging a drainage ditch in the area owned by a brickwork owner Jørgen Rasmussen from Nysted Østermølle. The hoard was found one half alen (around 20 centimetres or a little more) below the surface in a place where a tree had stood. First, 200 pieces were found, then 260 more pieces were found one alen (about 63 cm) away, and then about 750 pieces another alen away. They had all been rolled into some kind of fabric which had decomposed. Some pieces were given to different people so only 1,164 were handed in to The Royal Collection of Coins and Medals in accordance with the Danefæ provisions (treasure trove). The Collection let the royal assayer test the coins and his conclusion was that they were cast of tin with a little addition of zinc and lead. The Collection registered the hoard (no. FP 297) and kept a specimen of each of the 28 types: 22 Danish and six foreign (illustrated). The remainder and a reward of 2 rigsdaler (only 2 rigsdaler due to the lack of precious metal in the coins) were sent back to the finder. Two of the coins, not previously handed in, were sent to the collection in 1900 (no. FP 789). They were both returned

to the sender.

(H) Ribe, 14 agosto 2018 (data di scoperta della prima moneta) (*dep.:* inizio IX sec.)

Da ricerca con metal detector, 252 monete di età vichinga, tutte apparentemente poco circolate. Di queste, 249 mostrano una rara combinazione iconografica testa/cervo, mentre sulle altre 3 è incisa una nave vichinga con un pesce sotto la chiglia. Risalgono al regno di Goffredo di Danimarca o di un suo successore.

Sarebbero state gettate sul fondo di una palude come offerta rituale per gli dèi norreni oppure perse da un mercante, all'inizio del IX secolo, durante il regno di Goffredo di Danimarca.

(H) Stenmagle O(d)strup, Zealand, 1874 (dep.: 1676-77)

In 1874 a farm labourer, Niels Eliassen, from Stenmagle O(d)strup on Zealand found a coin hoard in a field at Stenmagle O(d)strup belonging to a farmer, Søren Pedersen. The latest coins are dated 1676. As there are none of the very common coins from 1677 this suggests the hoard was probably buried in 1676-7 during the Scanian War (1675-79). The coins weighed 400-450 grams and lay at a depth of 40-50 centimetres by a big stone in an area which used to be forest. The hoard is registered as FP 366 in the Royal collection. The finder was rewarded with 20 Danish rigsdaler. Four coins (three 2 skilling coins and no. 271) were new to the collection, and five coins (all 2 skilling coins) were kept because they were better specimens than the ones already in the collection. The five collection coins replaced by better specimens and the remaining 263 hoard coins were considered duplicates and probably used for exchange. Only two coins (nos. 182 and 271) in the collection can with certainty be ascribed to the hoard today.

Cons.: Two (perhaps a few more) preserved at the Royal Collection of Coins and Medals. The rest are dispersed.

Bibl.: MÄRCHER 2012.

(H) Vestermarie parish, Bornholm, 1877 (dep.: 1750 or after)

In 1877 a smallholder, Pehr Pehrson, found a coin hoard while removing a tree on the boundary between Steensgaard and Gadegaard in Vestermarie parish on the Isle of Bornholm. Most of the coins were different and of the most common types / denominations then in circulation. The hoard may have been all or part of a small collection of the then circulating coins. The variety of different years and mint marks suggest it is perhaps not a completely random sample of the general circulating medium on Bornholm around 1750. On the other hand, the 17 examples of the very common 2 skilling 1677 (MÄRCHER 2012, nos 27-43) do not suggest a collection, nor does the fact that only one coin (MÄRCHER 2012, no. 77) from the hoard was kept by the Royal Collection. The coins weighed c.380-385 grams and are registered as FP 410. The finder was rewarded with 40 Danish kroner. All the coins with one exception (MÄRCHER 2012, no. 77) were probably considered duplicates and used for exchange.

Cons.: One coin preserved at The Royal Collection of Coins and Medals. The rest are dispersed.

Bibl.: MÄRCHER 2012.

(H) Oos, Baden Baden, n.s. (dep.: n.s.)

Ritrovamento casuale dentro una pentola sotterrata nel 1836. Tesoro composto da oltre 5.000 pezzi monetali occultati insieme a «Klumpen geschmolzenen Silbers».

Composizione: una moneta per Engelberto I (1216-1225) e altre 560 per Enrico I (1225-1238) di Köln; alcune decine monete di Metz, datate tra il 1170 e il 1238; almeno 26 pezzi per Dietrich II, Trier (1212-1242); un pezzo per Ferri II di Lothringen (1205-1213) di Nancy; 7 o 8 sterline per Enrico II e/o III del tipo «short cross», soprattutto nei tipi datati tra 1220 e 1247; denari delle zecche di Epinal, Saarburg, Neufchâteau e Toul o area limitrofa della prima metà del XIII secolo. Monete italiane: 7 grossi veneziani (4+3) attribuiti rispettivamente a Pietro Ziani (1205-1229) e a Jacopo Tiepolo (1229-1249).

Per la zecca di Genova: pochi (3?) grossi del tipo + •IA•NV•A• / CVNRAD1REX• «da 6», tav. III, n. 75 (cfr. *CNI* 3, n. 103).

Cons.: In gran parte disperso, ad eccezione di alcuni esemplari presenti al gabinetto numismatico di Karlsruhe.

Bibl.: WIELANDT 1950.51, pp. 98-118, tavv. VII-VIII; STAHL 2001, p. 327; BALDASSARRI, RICCI 2013, pp. 294-295.

(H) Schemmerhofen, loc. Aufhofen, 1962 (dep.: c. 1435-40)

Ripostiglio rinvenuto nel 1962 nel corso degli scavi per le fondamenta di un garage nel terreno di una vecchia abitazione abbattuta due anni prima. I materiali sono stati rinvenuti all'interno di un vaso scoperto a circa 30-35 cm di profondità, rotti durante le operazioni di recupero nonostante le attenzioni riposte.

Nel vaso furono rinvenute 298 AR, delle quali 74 (73 grossi di Praga, 1 pegione di Milano) presentavano una contromarca. Di 24 di queste si è persa ogni notizia. Le rimanenti 274 sono state poste in vendita in asta da Auktionen Münzhandlung Sonntag frazionate in 49 lotti (Auktion 27, 27-28 novembre 2017, lotti 515-563). Tra i materiali in vendita è presente anche la parte del vaso sopravvissuta al recupero.

Notati:

- pegioni AR, Galeazzo e Bernabò Visconti (1355-78), zecca di Milano;
- pegioni AR, Galeazzo II Visconti (1354-78), zecca di Milano;
- pegioni AR, Gian Galeazzo Visconti (1395-1402), zecca di Milano;
- pegioni AR, Estore Visconti (1407-13), zecca di Monza;
- pegioni AR, Gian Galeazzo Visconti (1387-1402), zecca di Verona;
- grossi AR, Venceslao III (IV) (1378-1419), zecca di Praga.

Cons.: Disperso.

Discovery of the find: discovery during archaeological investigations

(SiF) Burglengenfeld, loc. Wieden, 1873 (dep.: post 822/3)

In un cimitero altomedievale (periodo merovingio fino al X secolo) nel sobborgo di Wieden, ritrovamento singolo di un denaro di Ludovico il Pio (814-40), class 3, tipo con tempio tetrastilo e legenda *XPISTIANA RELIGIO*, attribuibile – seppure con riserva – alla zecca di Milano.

Cons.: Regensburg, Museum.

Bibl.: VON WALDERDORFF 1877, p. XI (acquisizione dei reperti per l'associazione senza menzione della moneta); SCHRATZ 1880, n. 9 (senza riferimento al luogo della scoperta); STEINMETZ 1932, p. 262; BLACKBURN 1993, p. 49 n. 41; HAHN 1993, p. 12; HAERTLE 1997, p. 934 n. 546; HAHN 2000, pp. 60-61; EMMERIG 2004, n. B 12 (FK/NK 1226; *Die Fundprovenienz dieses Stücks (und von zwei weiteren Münzen der Herzöge Arnulf und Heinrich IV.) wird offenbar erstmals im Führer durch die Sammlungen des historischen Vereins in Regensburg von Steinmetz im Jahr 1932 erwähnt. Stroh hat diese Münzen in seine Publikation der Gräber von Burglengenfeld-Wieden nicht aufgenommen*195, und die beiden herzoglichen Stücke dürften für das Gräberfeld auch reichlich spät sein. So ist die Fundprovenienz offenbar als durchaus unsicher zu betrachten. Im Museum Regensburg war dazu keine Überlieferung zu finden. Das kleine dicke Kreuz mit starken Abschlusslinien an den Kreuzbalken, verbunden mit den großen Buchstaben der Umschrift, spricht für eine Einordnung der Münze in die Gruppe, die der Münzstätte Mailand zugerechnet wird); COUPLAND, EMMERIG 2019.

Other characteristics of the materials: coins with countermarks

(H) Manching, scavi 1999 (*dep.*: II-I sec. a.C.)

Da scavo archeologico del 1999 vicino a Manching, 483 AV celtici risalenti al II-I secolo a.C., probabilmente prodotti da un'officina locale o nell'importante *oppidum* di Manching, un grande insediamento celtico fondato probabilmente nel III secolo a.C. e abitato da 5000-1000 persone fino al 50-30 a.C. circa. Forse un deposito votivo.

A Manching – oltre al tesoro celtico che si suppone essere stato un deposito votivo – sono state trovate anche monete d'oro contraffatte, in bronzo e suberate con un sottile strato d'oro.

Cons.: Disperse. Rubate il 22 novembre 2022 dal Museo celtico e romano di Manching, probabilmente rifuse.

Bibl.: <https://www.cronacanumismatica.com/e-finito-nel-crogiolo-il-grande-tesoro-celtico-di-manching/> (URL visitato il 13/2/2024).

(H) Stammham, 2014 (*dep.*: post 1330)

Ripostiglio scoperto nel 2014 in una foresta nei pressi di Stammham (Germania) da Kurt Richter, durante ricerche condotte con l'ausilio di un rilevatore di metalli, contenente 33 AV, tra cui 1 aureo di Costantino I, 1 tremisse longobardo, 1 augustale, 28 fiorini di Firenze e 2 imitazioni non firmate del fiorino d'oro di Firenze.

Relativamente ai fiorini:

- zecca di Firenze, periodo dei maestri di zecca sconosciuti (1252 – 1303/I)
 - 1290 ca. – 1299 ca. (compasso): 1 es.;
- zecca di Firenze, periodo dei maestri di zecca conosciuti (dal 1303/II)
 - 1303/II (ampolla con beccuccio): 1 es.;
 - 1307/II (pettine): 1 es.;
 - 1309/II (due spighe di grano su un gambo): 1 es.;
 - 1313/I (caldaia): 1 es.;
 - 1314/I (botte): 1 es.;
 - 1315/I (due trombe decussate): 1 es.;
 - 1319/I (colomba con ramo di olivo nel becco): 1 es.;
 - 1321/II (testa di leone): 2 es.;
 - 1322/II (monte con foglia di fico sopra): 2 es.;
 - 1323/I (croce compassata o trifogliata): 1 es.;
 - 1323/II (coppa con gambo aperto): 1 es.;
 - 1324/I (riccio): 2 es.;
 - 1324/II (accetta): 1 es.;
 - 1325/II (leoncino seduto): 2 es.;
 - 1326/I (sonaglio): 1 es.;
 - 1326/II (vomere): 1 es.;
 - 1327/II (candeliera): 1 es.;
 - 1328/II (chiocciola): 1 es.;
 - 1329/I (barile): 1 es.;
 - 1329/II (testa di bue): 1 es.;
 - 1330/I (cedro con due foglie): 3 es.;
- zecca indeterminata (imitazioni non firmate del fiorino di Firenze):
 - ante 1330 (ruota dentata?): 1 es.;
 - post 1321 (cesoie, imitazione del segno “cesoie” del 1321/I): 1 es.

Cons.: Consegnato integralmente dopo la scoperta presso lo Staatliche Münzsammlung di Monaco di Baviera per le attività di studio e attualmente in deposito temporaneo presso lo Stadtmuseum di Ingolstadt.

Tags: Late Medieval

(H) **Willanzheim**, 10 maggio 1853 (*dep.*: 1325)

Scoperto il 10 maggio 1853 durante i lavori in una fattoria, il ripostiglio era composto da 163 monete d'oro, probabilmente tutti fiorini di cui 57 furono acquistati in quello stesso anno dallo Staatliche Münzsammlung di Monaco di Baviera. Queste monete sono oggi parte di un gruppo leggermente più ampio di fiorini (61 es.) conservati nel museo.

Non esiste registrazione dell'originale composizione del ripostiglio. Tra i materiali sopravvissuti, notate monete delle zecche di Firenze e Pont de Sorgues, oltre a esemplari con segni ignoti attribuiti con riserva a Firenze o a zecche non altrimenti note (possibili contraffazioni da parte di Teodoro Paleologo e Obizzino Spinola). Dalle prime descrizioni redatte al momento del ritrovamento, è verosimile che vi fossero anche imitazioni realizzate in zecche estere, principalmente di area tedesca.

De Benetti (2019a, p. 302; 2024) riconosce 58 fiorini con legenda *FLORENTIA*, di cui 52 della zecca di Firenze e 6 imitazioni:

- zecca di Firenze, periodo dei maestri di zecca sconosciuti (1252-1303)
 - ca. 1270-ca. 1285 (stella a sei raggi): 1 es.
 - ca. 1270-ca. 1285 (pesce): 1 es.
 - ca. 1270-ca. 1285 (croce vuota con quattro punti): 1 es.
 - ca. 1270-ca. 1285 (ruota di carro): 1 es.
 - ca. 1285-1290 (torsello o balla): 1 es.
 - ca. 1285-1290 (martello): 1 es.
 - ca. 1285-1290 (chiave): 1 es.
 - ca. 1291-1299 (cesoie): 1 es.
 - ca. 1291-1299 (mitria): 1 es.
 - ca. 1291-1299 (arco): 1 es.
 - ca. 1291-1299 (torricella): 1 es.
 - ca. 1291-1299 (ponte merlato): 1 es.
 - ca. 1291-1299 (forbici): 1 es.
 - ca. 1291-1299 (compasso): 1 es.
 - ca. 1291-1299 (cappello): 1 es.
 - ca. 1291-1299 (pannocchia di panico): 1 es.
 - ca. 1291-1299 (bottone): 1 es.
 - 1300/II (bordone): 1 es.
 - ca. 1301-1303/I (barca): 1 es.
 - ca. 1301-1303 (ampolla con beccuccio): 1 es.
- zecca di Firenze, periodo dei maestri di zecca prevalentemente conosciuti (dal 1303/II)
 - 1304/I (palma): 1 es.

- 1304/II (incudine): 1 es.
- 1305/I (falcetto): 1 es.
- 1306/I (scala): 1 es.
- 1306/II (pera): 1 es.
- 1307/II (pettine): 1 es.
- 1308/I (foglia di fico): 1 es.
- 1308/II (due chiodi decussati): 1 es.
- 1309/I (scudo crociato sormontato da globetto): 1 es.
- 1309/II (due spighe di grano su un gambo): 1 es.
- 1310/II (monte): 1 es.
- 1311/I (corna di cervo con anelletto): 1 es.
- 1311/II (porta): 1 es.
- 1312/II (chiavistello): 1 es.
- 1313/I (caldaia): 1 es.
- 1313/II (staffa): 1 es.
- 1314/I (botte): 1 es.
- 1316/I (morso): 1 es.
- 1317/II (luna con stella inchiusa): 1 es.
- 1318/I (simbolo degli Acciaiuoli: acciarino tra due punti): 1 es.
- 1318/II (sole): 1 es.
- 1320/I (gallo): 1 es.
- 1320/II (due spade decussate): 1 es.
- 1321/I (cesoie): 1 es.
- 1321/II (testa di leone): 1 es.
- 1322/I (rosa con due foglie e gambo): 1 es.
- 1322/II (monte con foglia di fico sopra): 1 es.
- 1315-1325 (croce trifogliata, probabile segno del 1323/I descritto nel *Libro della zecca* come croce compassata): 1 es.
- 1323/II (coppa con gambo aperto): 1 es.
- 1324/I (riccio): 1 es.
- 1324/II (accetta): 1 es.
- 1325/II (leoncino seduto): 1 es.
- zecca indeterminata (imitazioni “non firmate” del fiorino di Firenze)
 - post 1310 (tre grandi globetti uniti): 1 es.
 - post 1310 (ruota dentata): 1 es.
 - 1311-1325 (due foglie): 1 es.
 - post 1312 (imitazione del segno grillo del 1311-1315): 1 es.
 - post 1317 (imitazione del segno fiasca del 1317/I): 1 es.
 - 1320-1325 (imitazione del segno colomba con ramo di olivo nel becco del 1319/II): 1 es.
- probabili intrusioni, zecca di Firenze
 - 1336/II (rondine): 1 es.
- probabili intrusioni, zecca indeterminata (imitazioni “non firmate” del fiorino di Firenze)
 - ca. 1340- ca. 1354 (fibbia tra cerchi, derivato dal segno fibbia con ardiglione del 1338/I): 1 es.

In DAY, DE BENETTI 2018 si propone una possibile data di chiusura antecedente (1325) rispetto a quella tradizionalmente riconosciuta (1338/9), attribuendone la probabile origine all'attività delle truppe mercenarie provenienti dal nord delle Alpi che combatterono in Italia tra gli anni '20 e '30 del Trecento.

Cons.: Parzialmente conservato presso lo Staatliche Münzsammlung di Monaco di Baviera, dove dei 61 fiorini d'oro attualmente registrati con provenienza dal ripostiglio, almeno quattro sono da considerarsi intrusioni, di cui due probabilmente identificati.

Bibl.: DAY, DE BENETTI 2018 (ricostruisce integralmente il ripostiglio, identificando correttamente i segni di

zecca); DE BENETTI 2019a, n. 7 (in particolare pp. 304-306 per i fiorini); DE BENETTI 2024, n. 8 (tabelle 5 e 9; appendice E).

(H) Limburg an der Lahn, 17 febbraio 1957 (dep.: c. 1340 (DAY, DE BENETTI 2018) o post 1338 (DE BENETTI 2019a e DE BENETTI 2024))

Ripostiglio di 136 AV, trovato il 17 febbraio 1957 sotto una lastra di pietra durante lavori in una macelleria.

Composizione:

- 80 fiorini di Firenze;
- 4 imitazioni "non firmate" dei fiorini di Firenze;
- 36 imitazioni "firmate" dei fiorini di Firenze: 5 fiorini papali (zecca di Pont de Sorgues, Avignone), 12 fiorini del Regno di Boemia, 7 fiorini del regno di Ungheria;
- 1 ducato di Venezia, doge Giovanni Soranzo (1312-1328)

De Benetti (2019a, pp. 451-452) identifica gli 80 fiorini di Firenze e le 4 imitazioni "non firmate":

- zecca di Firenze, periodo dei maestri di zecca sconosciuti (1252-1303)
 - ca. 1270-ca. 1285 (corna di cervo): 1 es.
 - ca. 1270-ca. 1285 (nicchio): 1 es.
 - ca. 1291-1299 (mitria): 1 es.
 - ca. 1291-1299 (ponte merlato): 1 es.
 - ca. 1291-1299 (cappello): 1 es.
 - 1300/II (bordone): 1 es.
- zecca di Firenze, periodo dei maestri di zecca prevalentemente conosciuti (dal 1303/II)
 - 1304/II (incudine): 1 es.
 - 1305/I (falcetto): 2 es.
 - 1305/II (balestra): 1 es.
 - 1306/I (scala): 2 es.
 - 1307/I (guastada): 1 es.
 - 1307/II (pettine): 1 es.
 - 1308/II (due chiodi decussati): 1 es.
 - 1309/I (scudo crociato sormontato da globetto): 2 es.
 - 1310/I (giglio): 1 es.
 - 1311/I (corna di cervo con anelletto): 2 es.
 - 1311-1315 (grillo, probabile emissione del 1312/I): 2 es.
 - 1315/I (due trombe decussate): 1 es.
 - 1315/II (sferza): 1 es.
 - 1317/II (luna con stella inchiusa): 1 es.
 - 1318/II (sole): 4 es.
 - 1319/II (due fiori): 1 es.
 - 1320/I (gallo): 2 es.

- 1320/II (due spade decussate): 2 es.
- 1321/I (cesoie): 1 es.
- 1322/I (rosa con due foglie e gambo): 2 es.
- 1322/II (monte con foglia di fico sopra): 1 es.
- 1323/II (coppa con gambo aperto): 1 es.
- 1325/I (due mazze di ferro decussate): 3 es.
- 1325/II (leoncino seduto): 3 es.
- 1326/I (sonaglio): 2 es.
- 1327/I (piccone a due punte): 1 es.
- 1327/II (candelieri): 2 es.
- 1328/I (agnello pasquale): 1 es.
- 1328/II (chiocciola): 1 es.
- 1326-1332/I (grappolo con foglia, possibile segno cedro con due foglie del 1330/I): 4 es.
- 1330/II (tanaglie): 1 es.
- 1331/I (due palme decussate): 4 es.
- 1332/I (pugnale): 2 es.
- 1333/II (vessillo con croce): 4 es.
- 1334/I (croce cuspidata): 1 es.
- 1334/II (spada): 7 es.
- 1335/I (palazzo): 2 es.
- 1336/I (trottola): 2 es.
- 1336/II (rondine): 1 es.
- zecca indeterminata (imitazioni "non firmate" del fiorino di Firenze)
 - ante 1338 (compasso, imitazione del segno compasso del ca. 1291-1299): 1 es.
 - ante 1338 (ampolla con beccuccio, imitazione del segno ampolla con beccuccio del 1301-1303): 1 es.
 - post 1318 – ante 1338 (lettera B, imitazione del simbolo degli Acciaiuoli del 1318/I): 1 es.
 - ante 1338 (segno non identificato, imitazione del segno vomere del 1326/II ?): 1 es.

Cons.: Sconosciuto.

RHEINLAND-PFALZ

(H) Bassenheim, 2015 (*dep.*: post 855)

Nel 2015, un tesoro di 20 denari carolingi è stato scoperto nei pressi di Bassenheim (distretto Mayen-Koblenz) nella Renania-Palatinato. Sei monete appartengono al tipo carolingio più comune, il cosiddetto tempio di Ludovico il Pio (814-840) con la legenda *XPISTIANA RELIGIO* al posto del nome delle zecche. Altre dodici monete furono coniate sotto l'imperatore Lotario I (840-855): dieci in Dorestad, una a Maastricht e una a Treviri. Da Mainz arriva un denaro, sul cui fronte si vede il monogramma di Ludovico II il Germanico (840-876). Il pezzo rimanente fu coniato da Lotario II (855-869) a Verdun.

Bibl.: COUPLAND 2019.

Id.: 9794

Tags: Early Medieval

(SiF) Boppard, 1915 (*dep.*: post 816/9)

Da ritrovamento singolo, denaro di Ludovico il Pio (814-840), zecca di Venezia, del tipo con scritta VENE | CIAS in due righe al rovescio, databile al 819-822.

(H) Vallendar, primavera 1869 (dep.: 1338-40)

Ripostiglio, scoperto durante lavori per la costruzione della linea ferroviaria Ehrenhreitstein – Siegburg all'interno di un contenitore di terracotta rinvenuto a dodici piedi di profondità. Contenente almeno 20 monete d'oro e 68 d'argento, tra cui 8 grosi tornesi. Documentati 12 fiorini, tra cui almeno un'imitazione non firmata, 5 monete d'oro di Carlo IV (1322-1328) e 3 di Filippo IV di Valois (1328-1350):

- zecca di Firenze (periodo dei maestri di zecca sconosciuti (1252 – 1303/I)):
 - 1270 ca. – 1285 ca. (croce vuota con quattro punti): 1 es.;
 - 1270 ca. – 1285 ca. (tre piccoli frutti): 2 es.;
- zecca di Firenze (periodo dei maestri di zecca conosciuti (dal 1303/II)):
 - 1304/II (incudine): 1 es.;
 - 1320/II (due spade decussate): 1 es.;
 - 1322/I (rosa con due foglie e gambo): 1 es.;
- zecca indeterminata (imitazioni non firmate del fiorino di Firenze):
 - ante 1335 (luna con stella inchiusa, imitazione del segno "luna con stella inchiusa" del 1317/II): 1 es.

Sono inoltre stati documentati 5 fiorini poi dispersi all'epoca del rinvenimento e quindi non verificabili, con i seguenti segni:

- “falcetto” (1305/I o ante 1335 se imitazione non firmata);
- “rosa con due foglie e gambo” (1322/I);
- “sonaglio” (1326/I o successivo se imitazione non firmata);
- “luna con stella inchiusa” (1317/II o ante 1335 se imitazione non firmata).

Cons.: Parzialmente conservato presso il Münzkabinett dell'LVR-LandesMuseum Bonn (Germania).

(H) Wettin-Löbejün, fraz. Wettin, n.s. (paulo ante 8 giugno 2024) (*dep.: paulo post 1652*)

Bel corso di lavoro di restauro di una antica fattoria, con radici medievali e sviluppo rinascimentale e seicentesco, ripostiglio con 285 AR rinvenute in un accumulo fortemente compattato nel terreno senza contenitore estivo (forse perché inizialmente contenute in un contenitore organico, come una borsa, consumatosi nel tempo).

Alcune monete italiane presenti, tra cui segnalate:

- scudo del 1630 a nome di Ottavio Farnese, duca di Parma e Piacenza (1622-46);
- tallero di Cosimo II de' Medici del 1620, granduca di toscana (1609-21);

L'edificio allungato a due piani con una facciata elegante, che aveva fini di rappresentanza, fu costruito nella seconda metà del XVI o all'inizio del XVII secolo. I proprietari erano membri benestanti della comunità di Wettin, come testimonia un piccolo portale a nicchia con posti a sedere, probabilmente risalente al 1550. Dal 1681 in poi, la casa fu probabilmente sede della farmacia più antica della città con tracce di questo utilizzo ancora visibili sotto forma di un soffitto barocco in stucco del XVIII secolo e di una volta da farmacia. In considerazione dei numerosi incendi cittadini attestati, è uno degli edifici secolari più antichi conservati di Wettin.

Il tesoretto fu nascosto poco dopo la fine della Guerra dei Trent'anni. Le monete elettorali e ducali sassoni e quelle delle contee di Hohnstein e Mansfeld sono particolarmente regionali. L'Albertustaler e la varietà di monete provenienti da paesi più lontani, come Austria, Svizzera e Germania meridionale, oltre alle due monete provenienti dall'Italia, suggeriscono che il proprietario fosse un commerciante o una famiglia di mercanti attiva anche nel commercio a lunga distanza.

(H) Gehege Röhrkirchen, Rendsburg-Eckernförde, 1856 (*dep.*: post 1629)

Nel 1856, i lavoratori Johan Koll, Jürgen Löck e Jürgen Mahrt del villaggio di Damendorff, a circa 15 chilometri a sud-ovest dalla città di Schleswig, trovano 10 talleri sotto le radici di un vecchio albero (forse un ontano) nel corso delle operazioni di pulizia degli alberti nella foresta reale di Röhrkirchen.

Composizione:

- Olanda
 - 1 *rijksdalder* 1624, West Friesland;
 - 1 *rijksdalder* 1620, Utrecht;
 - 1 *rijksdalder* 1591, Zeeland;
 - 1 *rijksdalder* 1619, Zeeland;
- Germania
 - 1 tallero 1610, Hamburg/Amburgo;
 - 1 tallero 1629; Magdeburg/Magdeburgo;
 - 1 tallero 1604, Johan Georg, August e Christian II di Sassonia;
 - 1 tallero 1625, Massimiliano I di Baviera (1597-1621);
- Austria
 - 1 tallero non datato, Ferdinando II d'Asburgo (1619-37);
- Italia
 - 1 tallero 1620, Ferdinando Gonzaga (1575-30), zecca di Guastalla.

A quell'epoca il re di Danimarca era anche duca di Schleswig e quindi, in base al *Dafnæ* (legge per i ritrovamenti), le monete entrarono a far parte delle Royal Collections of Coins and Medals di Copenhagen. I tre scopritori furono ricompensati con 20 *rigsdaler* danesi, che tra il 1813 e il 1873 equivalevano per l'appunto a 10 talleri.

Cons.: Copenhagen, Royal Collections of Coins and Medals (register number FB 156). Solo due esemplari conservati: *rijksdaalder* 1591 di Zeeland e tallero 1620 di Guastalla (entrambi illustrati in MÄRCHER 2011, p. 432). Le rimanenti otto monete disperse, probabilmente considerate dei duplicati e utilizzate per scambi secondo la prassi del tempo.

- Venetian Post Medieval silver soldino of Doge Leonardo Loredan (AD 1501-1521) .
The silver soldino of Venice was known *as* the galyhalpens (galley-halfpence) *as* it was brought by the annual Venetian trading fleets. The soldino was about the size of English halfpennies and was popular because of a contemporary lack of small change: soldini in fact occur *as* English finds more often than proper halfpennies of the period.

(SiF) Kirklees, parish of Denby Dale, n.s. (*dep.:* n.s.)

A medieval Venetian silver coin: a soldino of Doge Agostino Barbarigo (1486-1501). The coin has been pierced at 6 o'clock on the obverse. If the coin was suspended from the hole the designs would be upside down. This, and the lack of any other evidence suggesting the coin has been modified to use it as jewellery means that it is not deemed necessary to report this object as potential Treasure. It is 12.3mm in diameter and 0.5mm thick. It weighs 0.27gm.
