(H) New Fordey Farm, Barway, Soham, 1985-91 (dep.: c. 180 AD)

The discovery of twelve denarii found individually between 1985 and 1991 at New Fordey Farm, Barway, Soham in Cambridgeshire complements finds of aurei and denarii at the same location reported in 1958, 1979, 1981 and 1984. The presence of associated pottery sherds, and progressively decreasing wear from oldest to youngest coin, identify this as a disturbed hoard of at least 451 coins (the total found to date) with a closing date of AD 180 in the reign of Commodus (AD 180-92).

Bibl.: BARROWCLOUGH 2014.

Id.: 9946

Tags: Late Medieval

(SiF) North Hertfordshire, Graveley, n.s. (dep.: n.s.)

A silver soldino of Leonardo Loredan, Doge of Venice between 1501 and 1521. The coin is slightly bent and corroded. It measures 12mm in diameter, 0.1mm thick and weighs 0.27g.

The soldino, also known as the 'Galley-halfpence', circulated in Britain unofficially in the 15th and 16th centuries, due to a lack of small change available at the time (Daubney 2008) . To date, 101 examples of soldini of Leonardo Loredan have been recorded on the PAS database.

Bibl.: Data from the Portable Antiquity Scheme (<http://finds.org.uk/database/artefacts/record/id/276878>).

Id.: 5137

(SiF) South Holland, Whaplode, n.s. (dep.: n.s.)

A silver Venetian soldino of Doge Antonio Venier (1382-1400), dating to the late medieval period.

The soldino (plural ?soldini?), basically means the ?little shilling?. They were nicknamed the ?galyhalpens?, or Galley-halfpence after the ?Galley-men? who imported them, though this is a slightly misleading name because not all coins came over by galley; contemporary documents also refer to money being sent overland to England via courier.

During the 15th and 16th centuries there was a serious shortage of English struck halfpennies in circulation, and so people turned to soldini to fill the gap. These coins contained slightly less silver than the english halfpenny and so the English government attempted to rid the country of them through a series of restrictions and seizures at various points in the 15th and 16th centuries.

The coins recorded on the PAS span the period 1382 to 1538, and show that there were two main incursions. The first was under Doge Michele Steno (1400-13), and the second was 100 years later under Doge Loredan (1501-1521). This coin was part of the first incursion.

Silver coin. Venetian Soldino or galley money, so named for its introduction by rowers of Italian ships. Despite official disapproval, these coins helped make up a deficit in farthings in Late Medieval England. Possibly Doge Leonardo Loredan (1501-1521).

Obverse description: Doge right kneeling before martial saint with banner.

Obverse inscription: LE.LAV S[---]

Reverse description: Resurrected Christ facing.

Reverse inscription: LAVS TI.BI.SOLI (praise to thee alone).

Diameter: 12.24mm, Weight: 0.30gms. Die axis: 7.

Bibl.: Data from the Portable Antiquity Scheme (<http://finds.org.uk/database/artefacts/record/id/389239>).

Late Medieval Coin: Complete but worn struck or hammered silver soldino of Venetian Doge Leonardo Lorendano (1501-21). Known as 'galley-halpens' these circulated unofficially as halfpennies. This example is pierced but the piercing does not respect the image on either side of the coin and it was therefore probably not pierced for suspension but may have been pierced to mark it out as being unofficial tender.

Bibl.: Data from the Portable Antiquity Scheme (<http://finds.org.uk/database/artefacts/record/id/460768>).

Lancashire

(H) **Cuerdale**, 1840 (dep.: c. 905)

Ripostiglio, con c. 7.000 monete di cui c. 1.000 carolingie.

Tra le monete italiane, tutte della tipologia con tempio tetrastilo e legenda XPISTIANA RELIGIO, riconoscibili:

- 12 (?) es. di Ludovico III il Cieco;
- 11 es. di Lamberto;

- 13 es. di Berengario I re.

Segnalato anche 1 denaro AR antiquiores di papa Benedetto IV con Ludovico III il Cieco.

Impossibile stabilire la zecca di provenienza, in quanto in HAWKINS 1842-43 è fornita solo l'illustrazione di una moneta per tipo tramite disegno.

In HAWKINS 1842-43 sono elencati tre tipi diversi di monete a nome di "Ludovico", discutendo se possa trattarsi di Ludovico I il Pio o Ludovico II. La moneta nel disegno alla tav. VII, n. 88, sembrerebbe essere un esemplare di Ludovico III il Cieco del tipo abitualmente attribuito alla zecca di Venezia. Verosimile, dunque, che tutte queste monete siano di Ludovico il Cieco.

Per COUPLAND 2011, p. 240, le monete a nome di "Ludovico" italiane sono solo 7: 1 di Ludovico II, 6 di Ludovico III il Cieco.

Bibl.: HAWKINS 1842-43; DOLLEY, MORRISON 1966 (parla solo di 2 monete per Ludovico III); MORRISON, GRUNTHAL 1967, n. 98 (elenco impreciso per quanto riguarda le monete italiane); LAFAURIE 1975, p. 55 (cita); GRAHAM-CAMPBELL 1992; COUPLAND 2011, n. 218; GRAHAM-CAMPBELL 2011; COUPLAND, GIANAZZA 2015, p. 308; VALCI 2021, p. 204 n. 7 (c. 8.600 es.; dep.: 905-15; cita per la presenza di antiquiores); COUPLAND, GIANAZZA, HUISMAN, FLORISSON 2023 (cita).

(SiF) Rother, Udimore, n.s. (dep.: n.s.)

Venetian Post Medieval silver soldino of Doge Leonardo Loredan (AD 1501-1521)

The silver soldino of Venice was known as the galyhalpens (galley-halfpence) as it was brought by the annual Venetian trading fleets. The soldino was about the size of English halfpennies and was popular because of a contemporary lack of small change: soldini in fact occur as English finds more often than proper halfpennies of the period.

Bibl.: Data from the Portable Antiquity Scheme (<http://finds.org.uk/database/artefacts/record/id/265868>).

(SiF) Isle of Wight, n.s. (dep.: n.s.)

A Medieval Venetian silver soldino of Doge Michele Steno (AD 1400-1413) .

Obverse: +MICH AEL-STE[]; Doge standing left, holding banner, star above symbol (mintmark) in right field

Reverse: +S MARCVS VENETI; Winged and nimbate Lion of St. Mark within circle, holding book of Gospels

Diameter: 14.9mm. Weight: 0.31g. DA=12:6.

The silver soldino of Venice was known as the galyhalpens (galley-halfpence) as it was brought by the annual Venetian trading fleets. The soldino was about the size of English halfpennies and was popular because of a contemporary lack of small change: soldini in fact occur as English finds more often than proper halfpennies of the period.

(SiF) Cherwell, n.s. (dep.: n.s.)

A very worn silver soldino, possibly of Doge Leonardo Lauredan of Venice (AD 1501-1521) . There are only a few letters visible and the images on both faces are worn blank. A small area of the coin has been bent over, which has preserved the word 'SOLI'.

From the late 14th to the 16th century, these small silver coins known as 'galley pennies' circulated widely, but illegally, in England as small coinage was in short supply. They were brought to England by galley men trading wine and other goods, and their name may derive from Galley Quay in Thames Street, London, which was reputedly the centre for their distribution. During the 15th century they were deemed illegal many times with the final pronouncement coming in AD 1519/20.

(H) Watlington, 2015 (dep.: maggio 878 (?))

Ripostiglio di penny anglosassoni e oggetti vichinghi, scoperto con metal detector su un terreno privato da James Mather nel 2015. Composto da c. 200 monete (alcune in frammento), 7 oggetti di gioielleria e 15 lingotti d'argento, contiene numerose monete di Alfredo il Grande, re di Wessex (871-899), e del suo contemporaneo meno noto, Ceolwulf II di Mercia (874-879 c.), tra cui 13 esemplari del raro penny cosiddetto dei "due imperatori" che mostra Alfred e Ceolwulf seduti fianco a fianco sotto una figura alata della Vittoria o di un angelo.

Notate anche due monete carolingie del Regnum Italiae:

- denaro AR di Ludovico II d'Italia, probabilmente zecca di Pavia (1.62 g, 26.4 mm);
- denaro AR di Carlo il Calvo, zecca di Pavia (1.58 g, 27 mm).

Il tesoro può essere datato dalla presenza di un solo penny di tipo "Two-Line" che non fu prodotto fino alla fine degli anni '70, dopo la battaglia di Edington (maggio 878) tra le forze di Alfred e un esercito vichingo. Le forze vichinghe si mossero sia via terra che via terra, e probabilmente usarono l'antica pista conosciuta come Icknield Street che attraversa Watlington, vicino a dove fu trovato il tesoro. È plausibile che il tesoro sia stato seppellito a seguito di questa violenza o durante il conseguente movimento di popoli.

Cons.: Oxford, Ashmolean Museum.

Bibl.: WILLIAMS, NAYLOR 2016; NAYLOR, STANDLEY 2022 (pubblicazione integrale dei materiali); COUPLAND 2023, p. 117, nota 46 (cita per la presenza della moneta di Carlo il Calvo); COUPLAND, GIANAZZA, HUISMAN, FLORISSON 2023 (cita).

(SiF) Arun, Patching, n.s. (dep.: n.s.)

Venetian Medieval silver soldino of Doge Michael Steno (1400-13); the coin was so thin when cast that there are now holes in it around the inscription.

The soldino was known as the galyhalpens (galley-halfpence) as it was brought by the annual Venetian trading fleets. The soldino was about the size of English halfpennies and was popular because of a contemporary lack of small change: soldini in fact occur as English finds more often than proper halfpennies of the period. The Doge is Michael Steno and dates to the early 15th century.

Bibl.: Data from the Portable Antiquity Scheme (<http://finds.org.uk/database/artefacts/record/id/402743>).

(SF) Lelant, loc. Trink, n.s. (dep.: n.s.)

A silver penny of Æthelred II (978-1016) was found by the late Mr Trehwella senior “at Trink”; SWARTING ON LVND, mint of London (Thomas 1956, p. 170). The name of the moneyer should read SWETINC, a known London moneyer.

A silver penny of Henry III (1216-1272), NICOLE ON LVN, mint of London, also came from the same farm, together with a fifteenth century testoon of Galeazzo Maria Sforza (1468-1476), mint of Milan.

The whereabouts of these coins is not now known and their patina is not recorded. If all of them came from the same area, they could be a modern loss.

(SiF) Mullion, loc. Poldhu Cove, 1992 (dep.: n.s.)

Apart from the Carolingian coins supposedly from the Tregorrick, Trehwiddle hoard (n. 8880), the only other from Cornwall was found in 1992 (and presented to the Royal Institution of Cornwall, accession no. 1992/88) by D. H. Walden using a metal detector on the beach. It is a silver denier (20 mm), somewhat bent, but in fair condition. A loss from a contemporary shipwreck is not impossible, but hammered continental coins circulated widely in Britain.

Louis the Pious (814-840)

Obv. H LVDOVVICVS IMP surrounding a cross in central circle.

Rev. BITV / RIGES. Bourges in northern Aquitaine.

This belongs to Grierson and Blackburn 1986 nos 766-7, Class 2 (AD 819-822), in which the name of the mint is struck across the field. These coins are relatively common on the Continent with over a thousand in the hoards from Veuillin (Cher) and Belvézet (Gard). Note that the Emperor's name is prefixed by H, as are those of his son Lothar I. Carolingian coins are uncommon in Britain, although the Cuerdale hoard, Lancashire, found in 1840, did contain 7000 coins of which about 1000 are Carolingian.

(H) St. Austell, loc. Tregorrick, n.s. (ante 1788) (dep.: c. 868)

Philip Rashleigh (1729-1811) of Menabilly, Tywardreath, was a notable mineralogist and antiquarian who took a special interest in finds made in tin streamworks. The Pentewan valley has been streamed since the Bronze Age with antiquarian discoveries made since shortly before 1758 (Borlase, 1758, p. 163 and Plate XX) when tin ingots of uncertain date were discovered in what was then called St Austell Moor. In 1788, Rashleigh made known to The Society of Antiquaries (Rashleigh 1789 and 1794) the discovery of what is recognised as one of the most important Saxon hoards in this country in the streamworks near Trewiddle house which belonged to the Rashleigh family. The hoard has given its name to the Trewiddle style of silver ornamentation with animal decoration inlaid with niello. The hoard was discovered on 8 November 1774 in a heap of loose stones and covered with a piece of slate at a depth of around 17 feet. In that part of the valley, 17 feet would have been about the depth at which the tin ground lay, the depth becoming twice that nearer the sea. There can be little doubt that the hoard was hidden in a working streamwork. Even allowing for an increase in sedimentary cover since Saxon times, there is no other sensible explanation for objects recovered from such a depth. The hoard contained a gold pendant, a small gold ingot and two silver finger-rings which were lost before 1866. Nevertheless, most of the important items remained at Menabilly. They comprised a silver chalice now known to have been originally coated internally with gold, a unique silver scourge, silver strips formerly believed to have been drinking-horn mounts but now regarded as strap-ends, and other smaller silver items including about 114 silver pennies "secured and collected from the workmen, who had a scramble for the treasures" (Rogers 1867, pp. 137-8). C. S. Gilbert (1817, Vol. II, p. 869) wrote that the items appeared to have been hidden in the cup of the chalice, though this was broken when recorded by Rashleigh. Philip had no children, and the hoard passed to Coleman Rashleigh of Penquite, Luxulyan, who gave the antiquities and five of the coins to the Revd Canon John Rogers of Penrose, Helston, whose son, John Jope Rogers, presented them to the British Museum on 24 March 1880. It is unfortunate that all the coins did not remain with the antiquities. Philip Rashleigh made scant mention of them and added them to his already existing cabinet of Saxon and other early coins without, so far as one knows, much documentation, an unfortunate lack of foresight by one whose mineral collection was catalogued in great detail. No study of the coins was made until those done in 1867 by J.J. Rogers and 1868 by Jonathan Rashleigh (Philip's great-nephew) who would have had difficulty in sorting out the Trewiddle coins from others in the family collection. Rogers' list of coins was supplied by Jonathan Rashleigh so that their descriptions of the coins are the same. Wilson and Blunt (1961, p. 110) note that a Rashleigh paper in the British Museum shows that Philip already had a collection

by 1768 consisting of: Eadred; Ceolnulf; Burged (2); Ethelred third son of Athelwulf; Alfred the Great; Beornwulf; Edward the Elder; Edelred; Athelstan the Great (2); Edmund fifth son of Edward; Edgar son of Edmund (2); Athelred (5); Edmund Ironside; Cnut; Edward the Confessor (3); Peter Money York.

Philip is also known to have purchased more Saxon coins in 1802 from the Tyssen collection. Jonathan Rashleigh also added to the collection which he gave in 1900 to his son Evelyn William Rashleigh of Stokeston, Saltash, who auctioned them through Sotheby, Wilkinson and Hodge over nine days beginning on 21 June 1909. The catalogue was well illustrated, but only a few of the Trewiddle coins were pictured and many from the hoard were not mentioned as being so in the text. Some of the coins are known to have gone abroad making it impossible for Wilson and Blunt to trace all those which Jonathan Rashleigh and J.J. Rogers assumed in good faith to have come from Trewiddle. Had the entire collection existed today it should have been possible to identify all the Trewiddle coins by their "markedly brown patina". Twelve coins were given to the Revd Richard Hennah (1733-1815), Vicar of St Austell and St Blazey. Hennah and Rashleigh had a common interest in minerals, Hennah being listed in Rashleigh's MS Catalogue of Minerals as one of the people from whom he obtained specimens. Although Hennah's collection was not in the same class, it contained choice specimens said "to be disposed of" after his death on 13 April (Gentleman's Magazine, LXXXV, i, p. 477). It is likely that his coins were dispersed at the same time. At any rate, they are not known now. A few more coins formerly in the possession of Richard Hewett are noted below under Burgred.

A second hoard "from near St Austell" has also been assumed because 20 coins in the 1909 Sale are listed as such. They range in date from Ecgberht (802-839) to Eadgar (957-975), but there is no evidence to suggest there ever was a second hoard. The coins either came from Trewiddle or were wrongly supposed by J. Rashleigh to have done so. The Trewiddle hoard is now generally accepted to have been deposited around 868, i.e. excluding the later coins of Burgred, those of Alfred the Great and all later ones (see below under Burgred).

The most one can say is that the Trewiddle hoard was deposited in troubled times, as likely by the Danish 'host' as by Saxons. The objects must have come from southern or south-eastern England. If one accepts that the hoard dates to around 875, The Anglo-Saxon Chronicle gives an indication of what was happening then in the south-west. In 875 "the host eluded the West Saxon levies and got into Wareham", while in 876, "came the host to Exeter from Wareham, and the pirate host sailed west about, and they were caught in a great storm at sea, and there off Swanage one hundred and twenty ships were lost" (Garmonsway 1953, p. 75). The opinion of H. E. Pagan (1965) is that the hoard may well date to around 865 and did not contain any late coinage of Burgred or of Alfred. The early ninth century coins are in good condition indicating that the hoard represented savings and not coins from general circulation. What was happening in Cornwall at this time is not known. Much ink and paper would have been spared over the years if Philip Rashleigh had been as attentive to cataloguing his coins as his mineral collection. It is easy to imagine that some event up-country prompted the 'host' to deposit ill-gotten gains in the tin workings of some Cornish sympathizers, but the true story remains a mystery.

The composition of the Trewiddle hoard was deduced by Wilson and Blunt to be probably as follows, though certain of these coins are now considered unlikely to be part of it. Doubtful Trewiddle coins are marked *:

- Kings of Mercia
 - Offa (759-796): 1
 - Coenwulf (796-821): 2
 - Coelwulf I (821-823): 1 *
 - Beornwulf (823-826): 1 *
 - Berhtwulf (840-852): 10
 - Burgred (852-874): c. 52
- Kings of Wessex
 - Ecgberht (802-839): 3
 - Æthelwulf (839-858): 11
 - Æthelred I (865-871): 2

- Alfred (871-899): 2 *
- Archbishops of Canterbury
 - Ceolnoth (833-870): 7
- Uncertain Anglo-Saxon
 - Eanred: 1
- French
 - Louis the Pious (814-840): 1 *
 - Pippin ?: 1 *
- Dispersed without record: c. 20

TOTAL: c. 115

The coin of Pippin is said in a MS note in the British Museum to have been in the possession of Richard Hennah, though it is not mentioned in the lists by Jonathan Rashleigh and J.J. Rogers.

It's the so called "Trehiddle hoard".

(SiF) unknown, n.s. (dep.: n.s.)

Silver Venetian soldino of Doge Michele Steno (1400-1413), Type 5.

The Venetian soldino, meaning "little shilling", circulated unofficially as halfpennies in England during the 15th and early 16th centuries, due to a lack of small change in the country at the time. They were nicknamed "galylhalfpens" or galley-halfpence after the "galley-men" who imported them: the merchants on the Venetian galley fleet who came to England each summer. There were two main influxes of soldini, the first under Doge Michele Steno (like this coin) and the second under Doge Loredan (1501-1521).

Somerset

(H) Bath, Beau Street, 2007 (dep.: n.s.)

In 2007 during an archaeological excavation in advance of a hotel development situated 150 metres from the Roman Baths in Bath, a Roman silver coin hoard was unearthed.

This hoard was an exceptional find, not only because of its size – 17,500 coins in total – but also because of a number of unusual characteristics. Unlike other similar Roman hoards, the coins were discovered in a series of eight money bags – almost eight mini hoards in one – that are likely to have been deposited gradually over time.

Cons.: Londra, British Museum.

(H) Tisbury, 2010 (dep.: post 383 CE)

In 2010 the first of a hoard of late Roman silver coins was discovered near Tisbury. Over the following four years a metal detectorist recovered a total 44 fragments of late Roman miliarenses and siliquae which, through careful consideration has led to a catalogue of 29 coins.

The hoard consists of 24 miliarenses and five siliquae dating from AD 337-83. All the pieces showed only slight wear and no evidence of clipping. Most of the miliarenses, being thin and relatively large coins, had suffered serious damage in the ground, probably from the passage of heavy farm machinery. These 24 miliarenses were recovered as 39 fragments. The fragments of the incomplete miliarenses ranged from 20 per cent to about 95 per cent of the original fabric. For the majority of the coins, there was less than 60 per cent of the fabric recovered.

Discovery of the find: discovery with metal detector

WEST MIDLANDS

Herefordshire

(H) Leominster, nei pressi, 2 giugno 2015 (dep.: 878 c.)

Il 2 giugno 2015, due ricercatori con metal detector portarono alla luce un insieme di monete, argento e oro in un campo vicino a Leominster, nell'Herefordshire. I materiali furono recuperati illegalmente dai due scopritori, che cercarono a più riprese di venderli sul mercato antiquario, salvo poi essere recuperati in parte nei mesi successivi.

Notato un denaro AR di Ludovico II d'Italia (855-75) attribuibile alla zecca di Milano.

Conosciuto anche come Herefordshire hoard.

Cons.: Delle 300 monete circa stimate al momento della scoperta, la maggioranza risulta al momento dispersa. Sono state recuperate solo 29 monete d'argento, un braccialetto d'oro, un ciondolo di cristallo e un lingotto d'argento, oggi custoditi ed esposti presso il Museo di Hereford.

(H) Fyveley (near Bridlington?), paulo ante 11 October 1311 (dep.: 1311)

Hoard of florins and other silver coins come ashore in 1311 at a place called Fyveley, which it has not been possible to identify but it was in the "wapentake" of Dickering, an old administrative subdivision centred around the Flamborough headland near Bridlington in the East Riding of Yorkshire, on the coast.

the report states that it consisted in £300 worth of gold florins and silver coin plus silver in bar to a great sum. The full text, in translation, reads as follows: London, 1311 October 11. Commission to John de Donecastre and John de Barton of Fryton to enquire touching the appropriation by Robert de Lacy, late king's bailiff of the wapentake of Dykeringe, co. York, of a chest with gold florintines and silver coin to the value of 300l., and silver in bar to a great sum cast ashore at Fyveley in his wapentake, which as wreck of the sea belongs to the king. By K., on the information of W. de Melton.

Robert de Lacy appears to be the same person who spirited away the treasure brought ashore at Ryxton in 1314 (see find no. 10880).

Bibl.: Calendar of the Close Rolls preserved in the Public Records Office, Edward II, A.D. 1314-1318 (London: Eyre and Spottiswoode for Her Majesty's Station, 1893), p. 422. Communication W.R. Day jr.

(H) Ryxton (?), near Scarborough (Scardeburch), 22 November 1314 (dep.: 1314)

Hoard of gold florins (of indeterminate size) and other valuables that went down in a shipwreck off the Yorkshire coast of England near Scardeburch (i.e. Scarborough, North Yorkshire): AV & AR, from a shipwreck treasure; gold florins [of Florence], of an unknown quantity, plus silver “in mass”, jewellery and other goods.

The record of the hoard survives in a writ of King Edward II, instructing a group of men to pursue the person accused of making off with the loot, which had been “thrown” ashore near a place called Ryxton, which cannot be identified with any certainty, but the document notes that it lay in the county of York. The document is dated 22 November 1314.

Robert de Lacy appears to be the same person who spirited away the treasure brought ashore at

Fyveley in 1311 (see find no. 10893).

Bibl.: Calendar of the Close Rolls preserved in the Public Records Office, Edward II, A.D. 1314-1318 (London: Eyre and Spottiswoode for Her Majesty's Station, 1893), p. 127. Communication W.R. Day jr.

(SiF) York, n.s. (dep.: n.s.)

A post medieval Venetian coin; a soldino of Agostino Barbarigo (1486-1501) made of an unusual alloy of gold and silver which appears golden coloured instead of the usual silver. This design was used by Barbarigo before he changed over to the new (and much more common) soldino design. However, the style overall is bad, especially the lettering and the mint mark of N over M to the right of the doge is not listed in the detailed catalogue (Barrie Cook pers comm.) This, and the unusual metal suggests that it is some form of contemporary copy or an unknown variety. The coin is discoloured purple and orange on the obverse which may suggest that it has been heated. Portable ERF analysis indicates that the composition is about 45% silver, 53% gold, and 0.8% copper.

(H) Linnakse, 17 August 2010 (dep.: post 1059)

On 17 August 2010 a Late Viking period hoard (t.p.q. 1059), consisting of silver coins, pieces of silver jewellery and fragments of hand-moulded ceramic vessel, was brought to the Institute of History, University of Tallinn. This remarkable discovery had been made a day earlier in a recently harvested field in the village of Linnakse (North-Estonia, county of Anija) using a metal detector. The finder of the hoard also handed over a number of bronze and iron artefacts from three different periods: the Roman, the Middle and the Late Iron Age. The artefacts, all of them with marks of intentional damage or fire deformation, had been found in the same field 20-50 m south of the find-spot of the hoard. The exact circumstances of the discovery remained unclear due to the urgent need to excavate the silver hoard. Therefore it was decided to proceed with archaeological investigation, including landscape survey and trial excavations, at the site.

Among the coins: 1 penny AR, emperor Henry II (1014-24), mint of Pavia.

(H) **Chilleurs-aux-Bois, entre le lieux-dits La Rouche et Les Tirelles**, fouilles 2006 (dep.: XVIe siècle)

En 2006 la fouille sur 4 ha d'une ZAC située aux lieux-dits La Rouche et Les Tirelles a permis de mettre en évidence une occupation de longue durée, marquée notamment par la présence d'un fanum (Les Tirelles) et de vestiges d'une occupation significative du haut Moyen Âge avec une villa mentionnée dans un diplôme de 956 qui en confirmait la propriété à une dénommée Gitberga (La Gervaise). Pour l'époque moderne les vestiges sur le site de La Rouche sont limités à

un bâtiment qui peut être identifié comme un four banal, mentionné dès le xiii^e siècle et attesté sur un plan de 1669 et dont les fondations ont pu être mises en évidence. Au fond d'une cave correspondant à une dépendance située au sud de ce four un petit aménagement de quatre pierres calcaires posées de chant protégeait une petite céramique (avec couvercle) qui contenait quatre monnaies d'or du XVI^e siècle.

Le comblement de cette cave et son mobilier (quelques tessons XVI^e-XVII^e siècles) n'apporte pas d'éléments complémentaires sur la position de cette cachette ou sur son accessibilité permettant d'y ajouter ou d'en retirer des pièces et il est difficile de déterminer s'il s'agit d'un simple reste d'un trésor plus ample que le récipient aurait pu contenir. Le pot renversé et rempli à l'occasion du comblement ne contenait pas d'autres traces matérielles. Néanmoins la valeur de quatre pièces d'or renvoie à un nombre significatif de douzains ou de pièces d'argent qui auraient pu remplir ce pot.

Composition:

- France, Louis XI (1461-1483). Écu au soleil (1474-1483), Perpignan (3,31 g; 28 mm);
- Espagne, Jeanne et Charles (1537-1555). Couronne ou escudo, Tolède (3,36 g; 25 mm);
- Portugal, Sébastien (1557-1578). Cruzado de 500 reais, Porto (3,75 g; 25 mm);
- Pays-Bas, Philippe II (1556-1598), demi-réal d'or, Anvers, 1560-1573 (3,47 g; 25 mm).

(H) località imprecisata (tra Pont-Évêque et Septème), 1875 (dep.: c. 1230)

La Biblioteca Municipale di Grenoble possiede un deposito monetario medievale le cui circostanze della scoperta rimangono sconosciute. Solo una piccola nota scritta a mano da Georges de

Manteyer ci dice che questo tesoro fu trovato nel 1875 tra Pont-Évêque e Septème, e che lui stesso lo donò alla città. La nota menziona anche che "la trouvaille est complète, sauf une quinzaine de deniers prélevés pour analyse". Questo tesoro era composto da monete di lega di argento e rame. Secondo la nota scritta a mano, questo tesoro consisteva in 1559 monete, distribuite come segue:

- Vienne: 964 monete, tra cui 910 denari e 54 oboli;
- Valence: 533 monete, tra cui 520 denari e 13 oboli;
- Lione: 62 monete, di cui 60 denari e 2 oboli;
- Vienne: 900 monete, tra cui 851 denari e 49 oboli;
- Valence: 471 monete, tra cui 458 denari e 13 oboli.
- Lione: 58 monete di cui 56 denari e 2 oboli.

Discovery of the find: fortuitous discovery, unknown circumstances

(H) Paladru, n.s. (ante 1865) (dep.: post 1263)

Ripostiglio scoperto da un contadino mentre ripuliva un campo dai resti di una villa rovinata. Numero incerto di esemplari, 287 esaminati. Tra le monete ritrovate notati:

- denari e oboli con legenda *vmbertvs* (Umberto II o Umberto III di Savoia?), zecca di Susa;
- denari con legenda *amedevs* (Amedeo III o Amedeo IV di Savoia?), zecca di Susa;
- denari forti di Pietro II di Savoia;
- 2 denari crociati di Verona (ante 1185-c. 1250);
- 1 obolo di Piacenza (emesso tra il 1140 e il XIII sec.);
- 7 denari con legenda *MARSAGONA*, zecca incerta (attribuibili ai marchesi di Savona, XII-XIII sec.);
- altre monete di Vienne, Valence, Lione, Clermont, Orange, Viviers, Avignone, Besançon, Langres, Borgogna (Ugo IV, 1218-72), Forcalquier (Guglielmo V, 1209-30), Provenza (Alphonse I-II, 1167-96/1196-1208; Charles I, 1246-66).

In MEC 12, p. 695 in merito alle monete di Savoia si riporta una consistenza di c. 20 denari of Savoy (1 Umberto II, 1092-1103; 4 Amedeo III, 1103-48; 1 Umberto III, 1148-89; 10-12 Pietro II, 1263-8) and 3 oboli (Umberto III).

La classificazione di queste monete – proposta in GÉRY 1865 e ripresa da altri autori successivi – è imprecisa e non permette di individuare lo stile e dunque l'epoca di effettiva coniazione. Su queste monete la letteratura attuale non propone un inquadramento convincente, pertanto le loro attribuzioni a Umberto II o III di Savoia, così come quelle ad Amedeo III o IV di Savoia possono richiedere una profonda revisione. Considerando il peso delle monete e la presenza di monete riconducibili al primo e secondo quarto del XIII secolo, è probabile che le monete sabaude debbano essere assegnate ai sovrani che hanno governato in questo periodo, a meno di non pensare a una immobilizzazione della tipologia.

Bibl.: GÉRY 1865; DUPLESSY 1995, p. 108 n. 257; MEC 12, pp. 695-696 n. 131.

(H) Sainte-Blandine, novembre 1889 (dep.: secondo terzo del I sec. a.C.)

Au mois de novembre 1889 fut mis au jour un «vase de cuivre repoussé à larges bords» avec 1.454 pièces en argent qui fut publié par F. M. Allotte de la Fuye avec trois planches photographiques de 105 droits et/ou revers de monnaies. La plupart des monnaies furent dispersées dans le commerce sans qu'un catalogue individuel soit réalisé; un récapitulatif a cependant été dressé par Y. Van der Wielen. En 1976 un catalogue de vente de la Société de Banque Suisse/SBS (n° 23, prin-temps 1976), avec l'ensemble des photographies individuelles a proposé 59 monnaies au cavalier et une monnaie Kaletedou indiquées comme provenant de ce trésor. Cet ensemble avait été présenté dans le Catalogue par M. Y. Van der Wielen qui, à l'époque, travaillait dans cette banque. Les renseigne-ments qu'il avait, lui ont permis de préciser qu'il s'agissait bien de monnaies provenant de Ste Blandine y compris le Kaletedou, monnaie de même métal, de même chronologie et de même métrologie, émise dans une région proche, et qui circule en même temps, même si cette pièce n'est pas mentionnée dans la publication d'Allotte.

La date de l'enfouissement de ce trésor reste difficile à préciser: il semble que les auteurs s'accorderaient sur le deuxième tiers du premier siècle avant J.-C. Dans le lot de la SBS 1976 se trouve un quinaire à la légende KALETEDOU dont la datation pourrait se situer autour de la même période, au moins vers le bas. L'attribution des monnaies au cavalier au seul peuple des Allobroges repose sur l'abondance de trésors et de monnaies isolées sur le territoire attribué à ce peuple. Mais les découvertes restent abondantes en dehors de ces frontières si bien qu'il est possible d'envisager des émissions, de typologie identique, qui ont pu être produites par divers peuples de l'espace rhodanien pour des besoins liés, par exemple, aux soldes des troupes auxiliaires.

Puy-de-Dôme

(SF) La Roche-Blanche, loc. Gergovie, fouilles 2016 (dep.: n.s.)

La fouille de 2016 a livré 115 monnaies issues de la fouille des niveaux du secteur de la porte sud (88 ex. en contexte) et du secteur dallé situé au centre du plateau (17 ex. en contexte). Un lot de 10 pièces hors contexte ou récoltées dans la terre végétale durant la phase de décapage complètent la série. La majorité des pièces proviennent de la fouille de niveaux de circulation et assez peu d'ensembles clos. L'état de conservation des pièces est comparable à celui des monnaies issues des fouilles précédentes. L'usure liée à la circulation des monnaies est majoritairement faible. Les exemplaires ponctuellement ou totalement corrodés sont nettement plus nombreux. Ils sont de ce fait souvent incomplets. Une douzaine de monnaies, soit 10,4% de la série n'a de ce fait pu être identifiée. Le faciès monétaire montre la prédominance des monnaies gauloises sur les romaines et notamment des espèces attribuées aux Arvernes.

Les 88 monnaies trouvées en contexte dans ce secteur sont dominées par les espèces gauloises (79 ex. soit 89,8%) et notamment par les monnaies attribuées aux Arvernes. Ces dernières sont presque exclusivement représentées par des bronzes frappés. Une seule fraction d'argent qui n'a pas pu être rattachée à une série précise, ainsi qu'un potin au long cou complètent la série. L'essentiel du numéraire est constitué d'EPAD au guerrier et de VERCA dont la frappe débute après la Guerre des Gaules. Les séries qui apparaissent à La Tène D2a comme les bronzes CICIIDV.BRI/EPAD qui constituent l'essentiel du numéraire au moment de la Guerre des Gaules ou les bronzes DONNADV, ADCANAVNOS et CALIIDV sont mal représentés dans ce corpus.

Le numéraire non arverne est dominé par des exemplaires attribués aux Bituriges Cubes (5 ex.). Il s'agit en l'occurrence de quatre bronzes frappés des séries ABVDOS et VANDIINOS, ainsi que d'un potin au «taureau chargeant». La série compte également un potin «à la tête diabolique» attribué aux Turons, ainsi qu'un semis à légende SEX.F /T.POM attribué aux Cavares. Un second exemplaire hors contexte provient de l'US 300. La dernière monnaie est une obole à la légende NEM COL frappée à Nîmes aux environs de 40 av. J.-C. Hormis les bronzes ABVDOS qui apparaissent durant La Tène D2a et les bronzes VANDIINOS qui circulent durant la transition LTD2a/LTD2b, les autres monnaies non arvernes circulent durant LTD2b et le début de la période augustéenne.

Les monnaies romaines sont au nombre de neuf. Le numéraire d'argent est représenté par un denier républicain au nom de P. Crassus frappé en 55 av. J.-C. et par un denier fourré au nom de L. Censor, dont le prototype a été frappé en 82 av. J.-C. Cette monnaie n'a pas réussi à tromper la vigilance des utilisateurs qui l'ont mutilé en la pliant en deux. Le monnayage de bronze républicain n'est documenté que par un dupondius de l'atelier colonial de Lyon frappé en 36 av. J.-C. Les autres monnaies romaines sont des dupondii au crocodile de la colonie de Nîmes (6 ex.). Dans le détail on trouve deux Nîmes I frappés entre 16/15 et 10 av. J.-C., trois demi dupondii des séries I ou II entiers ou fragmentés et un quart de dupondius d'une série indéterminée. Malgré les incertitudes de rattachement de plusieurs monnaies à l'une des trois émissions de l'atelier de Nîmes, il est pratiquement certain que seule la première est représentée à Gergovie. En effet, tous les exemplaires que nous avons pu rencontrer et qu'il était possible de rattacher à une série précise appartenaient à la première émission (16/15 et 10 av. J.-C.).

Dans l'ensemble, le numéraire provenant du secteur de la porte sud peut être qualifié de tardif. Les monnaies qui apparaissent avant la conquête se trouvent majoritairement dans des niveaux de circulation et ont un caractère résiduel. Le seul ensemble clos qui semble plus ancien est la structure FO 20. Son remplissage (US 312) a livré un CICIIDV.BRI/EPAD et un ADCANAVNOS, alors que le niveau qui le recouvre (US 305) contenait des monnaies majoritairement plus tardives, un CICIIDV.BRI/EPAD, trois EPAD au guerrier et un potin biturige. Les contextes plus ouverts sont forcément moins homogènes, notamment lorsqu'il s'agit de niveaux de circulation tels qu'une porte. Toutefois, l'essentiel du numéraire mis au jour dans ce secteur est clairement postérieur à la conquête et circule encore largement durant le principat d'Auguste.

Les 17 monnaies mises au jour dans le secteur central proviennent du nettoyage des dalles pour neuf d'entre elles et de la fouille de la fosse 34 pour les huit autres (tabl. 3). Elles se répartissent en 14 monnaies arvernes et trois romaines. Le nettoyage des dalles a surtout livré des monnaies tardives dominées par les EPAD au guerrier, auxquelles s'ajoutent un ADCANAVNOS, un CICIIDV.BRI/EPAD, ainsi qu'un demi dupondius de Nîmes. Les monnaies provenant de la fosse 34 ont été recueillies dans les us 308 et 320. La première correspond au remplissage d'un caniveau (US 308). Elle a livré une monnaie d'argent arverne de la série «au chien», un bronze ADCANAVNOS, un EPAD au guerrier, un demi dupondius tardorépublicain très usé de Lyon ou Vienne et un semis à l'aigle au nom d'Auguste. La seconde us correspond à la partie sud de la fosse (US 320). Un bronze ADCANAVNOS et deux EPAD au guerrier en proviennent. Le lot issu du caniveau est peu homogène, associant des frappes apparaissant à La Tène D2a et des frappes de La Tène D2b et de la période augustéenne pour la plus récente. Dans son ensemble le faciès monétaire de ce secteur est dominé par les frappes de La Tène D2b et augustéenne précoce.

(SF) Pardines, n.s. (dep.: IV sec. d.C.)

Ritrovamento in tomba di 14 monete di età romana, databili al IV sec. d.C. Alcune di esse sono state ritrovate in prossimità del cranio dell'inumato, in una posizione che fa pensare al rito dell'"obolo di Caronte". Nove di esse fanno però pensare alle rimanenze di una borsa attaccata alla cintura dell'inumato (tomba 135).

L'emissione più antica è a nome di Diocleziano, databile al 302-303. Le emissioni più recenti sono

le nove trovate insieme, al tipo della *Reparatio Reipub* e databili al 378-388.

(H) Dijon/Digione, bourg de Saint-Bénigne, n.s. (ante 29 maggio 2019) (dep.: post 1484)

Da sotto il pavimento di una abitazione, vicino a un muro, ripostiglio con 34 monete (10 AV+24 AR) e un pendente in oro smaltato verde e bianco con lettere C e V unite in corda dorata. I materiali erano contenuti in una piccola scatola di bronzo – di cui restano alcune vestigia – danneggiata nel corso di alcuni lavori edili nel XX secolo.

Le monete risultano tutte emesse nella seconda metà del XV secolo. La più antica è un AV del Brabante, databile tra il 1432 e il 1467. La più recente è un AV di Innocenzo VIII, papa dal 1484 al 1492. La maggior parte sembra aver circolato molto poco.

Segnalate:

- Ferrara, ducato AV di Ercole d'Este;
- Venezia, lira AR di Nicolò Tron (tosata?);
- Milano, grossoni da 20 soldi AR di Galeazzo Maria Sforza;
- Savoia, testoni AR di Carlo I;
- Genova, esemplare AR non determinato;
- Roma (?), ducato AV di papa Innocenzo VIII.
- altre monete di Brabante, Palatinato (Filippo I), Francia (Luigi XI), Borgogna (Filippo il Buono).

Possibile presenza di falsi?

Il contesto del luogo di ritrovamento è databile tra la fine del XV e l'inizio del XVI secolo.

Bibl.: Inedito, in corso di studio da parte dell'INRAP.

Discovery of the find: fortuitous discovery, unknow circumstances

(D) Mandeure, castrum, fouilles 2013 (dep.: IV^e siècle (?))

En 2013, un dépôt monétaire de 15 sesterces de bronze a été mis au jour dans le cadre des fouilles du castrum de Mandeure (Doubs, France). Cet ensemble monétaire est constitué de 15 individus tous datés du II^e siècle apr. J.-C. et frappés par six des sept empereurs de la dynastie antonine. Le grand intérêt de ce dépôt est sans aucun doute son contexte de découverte, puisqu'il a été

retrouvé dans les soubassements d'un édifice du milieu du IV^e siècle.

Discovery of the find: discovery during archaeological investigations

(H) Fontaines, 18 dicembre 1893 (dep.: 845-50)

Ripostiglio, con circa 600 AR, di cui 500 visti direttamente da M.P. Pinette. Notati:

- 1 obolo di Ludovico il Pio, zecca di Melle;
- 1 obolo di Ludovico il Pio per l'Aquitania;
- 1 denaro e 2 oboli di Pipino per l'Aquitania;
- 3 denari e 1 obolo di Carlo il Calvo;
- i rimanenti denari di Ludovico il Pio del tipo con tempio tetrastilo e legenda XPISTIANA RELIGIO.

Almeno uno dei denari col tempio tetrastilo, fuso presso la zecca di Parigi per effettuare analisi del metallo, aveva caratteristiche tali da farlo ritenere attribuibile alla zecca di Milano (PROU 1898, p. 230, fig. 9 per un suo disegno).

(H) Mont-Saint-Sulpice, n.s. (dep.: 310 d.C.)

Constitué d'un demi-argenteus et de 1 086 nummi s'échelonnant de 294 à 310 de notre ère, le trésor de Mont-Saint-Sulpice se rattache à une famille d'enfouissements clos autour de l'année 310 et consécutifs à la troisième réduction du nummus. Le trésor constitue un nouvel exemple de thésaurisation mixte mêlant espèces d'argent et de bronze argenté et son originalité en la matière tient en la présence d'un «quinnaire». La composition de l'ensemble se révèle pour le reste tout à

fait classique et laisse penser à une accumulation régulière effectuée sur un laps de temps relativement étendu. La cohérence de l'ensemble est renforcée par l'homogénéité des monnaies les plus récentes issues des différents ateliers représentés. Si la répartition des monnaies en fonction des réductions successives ne pose pas problème par rapport à la classification communément admise, nous aurons toutefois ici l'occasion d'émettre quelques réserves quant au classement de certaines séries réduites. Comme tout ensemble numériquement conséquent n'ayant pas subi de tri lors de son invention, le trésor de Mont-Saint-Sulpice contient en outre bon nombre de monnaies rares ou inédites.

(H) Fougères, nei pressi, 18 aprile 1893 (dep.: post 1585 (o post 1589?))

Il 18 aprile 1893, nelle vicinanze di Fougères (Ille-et-Vilaine) ebbe luogo un ritrovamento costituito quasi esclusivamente da contraffazioni di liards francesi prodotti in zecche italiane, di cui la maggior parte fu acquistata dal signor Edouard Mariette, di Montebourg. Secondo i contadini che vendettero queste monete al signor Mariette, questo piccolo tesoro, scoperto in un muro, era racchiuso in una borsa di cuoio che fu inviata al dipartimento delle medaglie della Bibliothèque Nationale de France il 25 novembre 1893, e che, inoltre, poteva risalire allo stesso periodo delle monete in essa contenute. Questa borsa era dotata, all'interno e all'esterno, di tasche che si chiudevano con l'aiuto di piccole cerniere di cuoio. Le monete sottoposte all'esame del curatore del Cabinet des Médailles sono state 348, così ripartite:

- zecca di Desana, monete a nome di Agostino Tizzone (1559-89)
 - 3 es. liard con L;
 - 1 es. liard con DMM;
- zecca di Desana, monete a nome di Delfino Tizzone
 - 137 es. liard con H coronata e tre fleurs de lis, alcuni datati 1584 e 1585;
 - 23 es. liard con H coronata semplice, alcuni datati 1584 e 1589 (? , probabilmente però errore di lettura);
 - 66 es liard con H coronata ornata di anelletto centrale, qualcuno datato 1585;
 - 6 es. liard al tipo di Béarn, qualcuno datato 1585;
 - 36 es. liard au dauphin, qualcuno datato 1583 e 1585;
- zecca di Frinco, emissioni anonime

- 3 es. liard con H coronata;
- zecca di Frinco, monete a nome di Ercole e Claudio Mazzetti (1581-84);
- 28 es. liard con H coronata e tre fleurs de lis;
 - 1 es. liard con H coronata semplice;
 - 1 es. liard au dauphin;
 - 1 es. liard al tipo di Béarn;
- zecca di Passerano
 - 2 es. liard con H coronata, datati 1581,
 - 2 es. liard con H coronata, datati 1583;
 - 1 es. liard con H coronata e legenda VIRTVS;
- zecca di Messerano, monete a nome di Besso Ferrero Fieschi
 - 2 es. quarti con iniziali BF, datati 1579;
 - 2 es. quarti con iniziali BF, datati 1580;
- zecca di Casale Monferrato, monete a nome di Guglielmo Gonzaga duca (1575-87)
 - 4 es. liard au dauphin, di cui uno datato 1581 e uno 1582;
- zecca di Castiglione delle Stiviere, monete a nome di Ferrante Gonzaga
 - 1 es. liard au dauphin;
- zecca di Castiglione delle Stiviere, monete a nome di Rodolfo Gonzaga
 - 7 es. liard au dauphin;

(D) Mesneux, n.s. (dep.: n.s.)

Le trésor se compose de 343 monnaies d'orichalque (alliage de cuivre et de zinc), à savoir 337 sesterces et 6 dupondii. Il représente après nettoyage une masse d'environ 304 onces (poids théorique: $304 \times 27 = 8.208$ g pour une masse effective de 8205,03 g), soit une valeur de 85 deniers d'argent.

La thésaurisation des Mesneux débute, comme c'est souvent le cas en ce qui concerne les dépôts de bronzes du Haut-Empire, par des exemplaires très usés des Flaviens (69-96), précédés apparemment par un unique sesterce à l'effigie de Galba (68/69).

Les deux monnaies les plus récentes ont été émises par Septime Sévère (193-211). L'une est à son propre nom et date de l'année 193; l'autre est à celui de son épouse Julia Domna et a été émise l'année suivante. En dépit de son terminus post quem apparent, la masse thésaurisée correspond, comme nous le montrerons plus loin, à une ponction tardive dans le stock monétaire disponible à Reims à la charnière entre les III^{ème} et IV^{ème} siècles.

Bibl.: DOYEN 2010.

Discovery of the find: discovery during archaeological investigations

(SF) Hondschoote, Rue Wassendaele – Rue Coppens, n.s. (dep.: n.s.)

Les fouilles d'Hondschoote menées par Stéphane Leplus pour le compte de la société Archéopole ont livré 41 objets monétiformes. Il s'agit de: 26 monnaies; 6 jetons; 6 plombs à sceller; 2 dénéreaux; 1 poids.

Quatre des 26 monnaies sont restées non identifiées. Les 22 autres se répartissent comme suit:

- Monnaies romaines 2;
- Monnaie médiévale 1: Comté de Namur (double mite);
- Monnaies modernes 23: Pays-Bas méridionaux (Charles Quint (1506-1555): 9 ex. (8 courtes et une double mite); Philippe II (1555-1598): 5 ex. (1 liard, 1 gigot, 2 courtes, 1 maille); Albert et Isabelle (1598-1621): 1 ex. (double denier); Philippe IV (1621-1655): 2 ex. (2 liards)); Principauté de Liège (Ferdinand de Bavière (1612-1650): 1 ex. (liard); France (Henri IV (1589-1610): 1 ex. (douzain)); indéterminées: 4 ex. (1 liard, 1 AE (plus grand de courte), 2 courtes ?).

(H) Compiègne, rue de Trois Barbeaux, 25 marzo 1826 (dep.: XVII sec.)

Nel corso di lavori all'abitazione di M. Le Tellier situata in rue de Trois Barbeaux a Compiègne, di fronte a quella della Corne de Cerf, ripostiglio con pezzi in oro, principalmente spagnoli del XVII secolo, contenuti all'interno di un vaso en forme de creuset.

Contenuto incerto, presenti monete italiane, spagnole e svizzere. Notate:

- moneta AV di Filippo IV di Spagna, duca di Milano (1621-65), con legenda al R/ MEDIOLAN VVLNERI, probabilmente frutto di lettura errata (disegno d'epoca in BERDEAUX-LE BRAZIDEC 2003a, p. 51 n. 2);
- doppia AV 1615 di Ranuccio Farnese, duca di Parma e Piacenza, zecca di Piacenza (disegno d'epoca in BERDEAUX-LE BRAZIDEC 2003a, p. 51 n. 3);
- doppio scudo o doppia AV 1577, zecca di Genova (disegno d'epoca in BERDEAUX-LE BRAZIDEC 2003a, p. 51 n. 4).

Il peso totale del ritrovamento era di 6 livres 2 gros (ou 12 marcs 2 gros).

Cons.: Disperso. La maggior parte dei materiali fu divisa tra il proprietario e gli operai, e quindi venduta a peso a un orefice in ragione di 744 franchi per marco. Il proprietario ne conservò un solo marco comme objet de curiosité e l'orefice rivendette a parte un pezzo di Carlo V molto ben conservato,.

Bibl.: BERDEAUX-LE BRAZIDEC 2003a, pp. 50-51, prendendo la notizia e le illustrazioni dal manuscrit Léré conservato presso la Bibliothèque Municipale de Compiègne (VdC 197 IX 4 g).

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: necropolis / cemetery

(H) Staple, marzo 2015 (dep.: c. 1351+)

In March 2015, a small coin hoard was discovered in Staple, France. An article describing the find was published in the June 2015 bulletin of the Cercle Numismatique de Val de Salm entitled: "Trouvaille de Staple", authored by J. L. Dengis.

The hoard was comprised of 6 silver gros compagnons that had been found in a farm field. All 6 of the coins were struck in Flanders for Count Louis II of Mâle (1346-1384), and were presumably the contents of a purse, which has since disintegrated. The coins had fused together into a solid mass, and with the aid of a cleaning with an ammonia solution they were separated. The weights of the coins were not recorded. The coins are now with the current owner (presumably the original finder).

All six of the leeuwengroten present in the hoard were struck for Count Louis II of Mâle (1346-1384). Because of existing records from medieval Flanders, we know that there were eight separate issues of the leeuwengroot during the reign of Louis II of Flanders (Louis of Mâle) (Gaillard Type 219; Vanhoudt Type 2582), the first issue actually beginning under his father, Louis of Nevers (1322-1346), who was killed at the Battle of Crécy in August, 1346. Each successive issue of leeuwengroot was struck from either silver of a fineness reduced from that of the previous issue, or with a reduction in the weight of the coins, or both.

(H) Caen, 2011 (dep.: c. 1854)

Nella capriata di un grande edificio in pietra della fine del XVIII-inizi del XIX secolo nel centro storico di Caen (Calvados), nel corso di lavori di restauro, gruzzolo di 291 esemplari da 20 franchi in oro, detti "napoleons", conati tra l'anno 12 del calendario rivoluzionario (1803-1804) e il 1854.

I materiali, scoperti nel 2011 dal proprietario dell'edificio e da un artigiano, erano conservati in rotolini, avvolti in alcune vecchie lettere della fine del XVIII secolo.

Notato un esemplare a nome di Maria Luisa di Borbone per il Ducato di Parma (anno 1815, zecca di Milano) e 3 a nome di Carlo Alberto di Savoia (anno 1831, 1842, 1845; zecche non specificate).

Cons.: Dopo la denuncia, i materiali sono rimasti depositati presso il Service Régional de l'Archéologie de Basse-Normandie, che nel 2013 li ha inviati al Département des Monnaies, médailles et antiques della Bibliothèque Nationale de France per essere studiati. Nel 2014 sono stati restituiti agli scopritori e venduti a Bayeux.

(SiF) Molay-Littry, janvier 2017 (dep.: c. 150-100 av. J.-C.)

Statère AV des Parisii, pèsant 7,13 g pour un module de 22 mm, l'orientation des coins est à 2 heures.

- D/ Le droit est orné d'une tête humaine à droite dotée d'une chevelure faite de mèches enroulées à leur extrémité. Entre ces mèches et le visage, on distingue deux croissants caractéristiques des statères dits «au flan large». Une esse se déroule devant le visage. L'oeil est punctiforme, le nez très droit, les lèvres sont un demicercle bouleté. La coupe du cou est suivie, en bas, de stries verticales et parallèles.
- R/ Le revers présente un cheval à gauche, qui trace un profil mince et sinueux très élégant. Au-dessus de son dos se développe un ornement réticulé, caractéristique qui se retrouve sur l'ensemble du monnayage des Parisii. La crinière est figurée par une longue ligne perlée, qui se termine en spirale. Un lien onduleux part de la bouche de l'animal. Sous les jambes avant, apparaît une rosace, constituée de sept globules.

Selon la classification de J.-B. Colbert de Beaulieu, elle appartient à la deuxième classe des sept classes des statères des Parisii. Dans son ouvrage, J.-B. Colbert de Beaulieu recensait et citait 8 statères appartenant à cette classe II, pour laquelle quatre coins de droit et quatre de revers étaient connus. Depuis lors, 24 nouveaux exemplaires – en comptant celui du Molay-Littry – sont venus au jour. Au total, le nombre des exemplaires de cette classe II se monte à 32 individus qui autorisent une étude des liaisons de coins.

(H) Fécamp, 1963-69 (dep.: c. 980-985)

Lors de travaux de terrassement pour la construction d’un immeuble, en 1963, à l’angle de la rue Jacques-Huet et de la rue des Galeries, à Fécamp, une pelleuse mit au jour un trésor de monnaies réparti en deux récipients brisés par l’engin et l’ensemble dispersé dans les terres de déblai. La rapide intervention du Directeur de la circonscription archéologique de Normandie, M. Michel de Bouard, permit le dépôt au Cabinet des Médailles puis l’acquisition par l’État de 8584 deniers et oboles d’argent retrouvés entre 1963 et 1969. Son enfouissement en Normandie reflète la circulation monétaire du duché et dévoile l’importance insoupçonnée de l’atelier de Rouen

représenté par 6.044 deniers. A ce monnayage local sont venus se mêler 1.313 deniers et oboles du Mans, 510 de Quentovic, 110 de Tours, 84 d'Auxerre, 68 de Chartres, 52 de Limoges, 43 d'Orléans, 42 de Melle, 31 de Brioude, 30 de Paris, 23 de Meaux, 22 de Bourges, 21 du Puy, 14 du Palais, 14 de Nevers, 12 de Châteaudun, 11 de Saintes et 140 deniers et oboles provenant de 35 autres ateliers, les plus éloignés du lieu de l'enfouissement étant Milan, Pavie, Arles, Cologne, Lymne. La monnaie la plus ancienne est un denier de Louis le Pieux à la légende XPISTIANA RELIGIO frappé entre 829 et 840 attribuable à Venise, mais, avec un denier de Lothaire Ier frappé à Duurstede, on a là les seuls vestiges du monnayage du IXe siècle. Les monnaies les plus récentes qui datent le trésor sont, outre les monnaies de Rouen au nom de Richard Ier (943-996), difficilement datables, des pennies d'Edouard le Martyr frappés entre 975 et 978 et 5 deniers d'Arras au nom de Lothaire (954-986) portant dans un canton de la croix du revers un 'R' qui est très vraisemblablement l'initiale de Rothard, évêque de Cambrai-Arras depuis 980. L'absence de monnaies d'Hugues, de Lothaire frappées à Meaux, Tournus, Mâcon permet de situer l'enfouissement dans une fourchette relativement restreinte, entre 980 et 985. Pour Pavie/Pavia: 3 denari (2 Ottone I, 962-73; 1 Ottone I et Ottone II, 967-73).

(SF) Gruissan, établissement littoral de Saint-Martin-le-Bas, fouilles 2011-16 (dep.: n.s.)

Les fouilles conduites de 2011 à 2016 ont permis de constituer un corpus monétaire conséquent, constitué de 177 exemplaires.

- Pré-augustéennes: 6 (3,4 %), dont 2 petits bronzes de Marseille et 1 monnaie à la croix;
- Auguste: 12 (6,8 %), soit 10 dupondii de Nîmes (dont 5 moitiés), 1 as de Lyon et un quinaire Asia Recepta;
- Tibère: 7 (3,9 %), dont 3 as de Lyon contremarqués;
- Caligula: 3 (1,7 %) et Claude: 8 (4,5 %);
- Pas d'exemplaire de Néron;
- Flaviens: 5 (2,8 %);
- Nerva: 2 (1,1 %);
- Période antonine : un seul exemplaire, un as de Marc Aurèle (0,5 %);
- Période sévérienne: un as de Sévère Alexandre pour Julia Mamaea (222-235) (0,5 %);
- Maximin I: 1 sesterce (235-236) (0,5 %);
- Gallien: 1 antoninien (0,5 %);
- Divo Claudio: 4 antoniniens (2,2 %);
- Empire gaulois: 2 (1,1 %), dont 1 imitation; 1 antoninien indéterminé (0,5 %);
- Aucun exemplaire pour la fin du IIIe siècle et la Tétrarchie;
- Constantin I: 15 nummi (8,5 %)
- Fils de Constantin: 21 nummi (11,9 %); 5 imitations pour l'ensemble de la période;
- Période 341-348: 14 nummi (7,9 %);
- Période 341-350: 4 demie-maiorinae (2,2 %);
- Magnence: 2 maiorinae (1,1 %);
- Constance II: 34 (19,2 %), dont 15 imitations;

- Julien: 1 (0,5 %);
- Valentinien: 3 (1,7 %) dont 1 d'Antioche;
- Théodosiens: 3 (1,7 %);
- Indéterminés: 23 (13 %), dont 1 bronze coulé;
- Féodales: 2 (1,1 %) de la vicomté de Narbonne (un denier de Raimond Ier (966-1023), prototype narbonnais repris au XIIe siècle par Melgueil avec une légende plus dégénérée et une variante au revers; une obole d'Aymeri Ier, ce qui nous situe entre 1080 et 1105, découverte dans un niveau cendré en lien avec le fonctionnement d'un foyer culinaire (US 5183)).

(SiF) Villemur-sur-Tarn, paulo ante 1885 (dep.: n.s)

The Toulouse Museum archives contain a letter from 1885 reporting the discovery in Villemur-sur-Tarn (Haute-Garonne) of a coin from the Far East, namely Japanese. This is a "Tempo common currency" (Tempo tsuho) dating from the 19th century. Perhaps it was brought back from Japan by one of the missionaries born in the commune, for example Father Bernard Lala, naval chaplain, who died in Shanghai in 1883.

Pyrénées-Orientales

(H) Château Roussillon, area archeologica di Ruscino, scavi 1948-68 (dep.: ante III sec. a.C. – post 1723)

Nel corso delle diverse campagne di scavo succedutesi nell'area archeologica di Ruscino è emerso un numero complessivo di monete pari a 517, di cui 446 identificabili. Nel complesso, 414 monete riferibili all'età antica, le rimanenti 42 all'età medievale e moderna. Tra le monete di età romana, molte sono risultate intenzionalmente frazionate.

Notate monete visigote e arabe, unitamente a un gruppo di sei monete carolingie venute alla luce nel 1962 in prossimità di una cisterna (cinque denari delle zecche di Tolosa, Bourges, Pavia, Narbonne e Tours, 1 obolo di Melle). Segnalato anche gettone di conto des Lombards datato ai secc. XIII-XIV.

Bibl.: CLAUSTRES 1962 (prima notizia e catalogo delle sei monete carolingie rinvenute presso la cisterna); RICHARD, CLAUSTRES 1980 (catalogo completo dei materiali, ma solo una parte illustrata); HAERTLE 1997, n. 21; COUPLAND 2010, p. 311 (cita la moneta di Pavia); COUPLAND 2011, n. 20 (il ripostiglio di sei monete carolingie).

(H) **Angers, Plateau des Capucins**, 2008 (dep.: XIII siècle)

Le dépôt monétaire des Capucins a été mis au jour en 2008 sur le plateau nord-ouest de la ville d'Angers (Maine-et-Loire) lors d'un diagnostic archéologique de l'Inrap. L'environnement du dépôt n'a pas livré de structure ou de mobilier contemporain et la cache monétaire ne semble pas avoir bénéficié d'un aménagement particulier. Le dépôt proprement dit se compose de 1 216 deniers d'argent disposés dans un pichet dont le col et l'anse avaient été préalablement brisés, le tout enfoui très probablement au début du XIIIe siècle. Trois bijoux ou fragments de bijoux en argent se trouvaient parmi les monnaies. Un démontage stratigraphique du dépôt au laboratoire Arc'Antique de Nantes a permis de reconnaître les traits principaux de sa structure interne.

L'analyse du dépôt a révélé l'existence de deux voire trois contenants souples comprenant des lots de monnaies de compositions légèrement différentes. L'emplacement de la cache monétaire, loin de toute structure, et l'agencement interne du dépôt prêtent à penser qu'il s'agit d'une thésaurisation effectuée sur plusieurs années et destinée à de gros paiements plutôt qu'à des manipulations quotidiennes.

Discovery of the find: discovery during archaeological investigations

Hautes-Alpes

(H) Aspres-lès-Corps, 1885 (dep.: 926-31)

In tomba di cavaliere ungaro del X secolo, nove monete, solo sei delle quali oggi conosciute. Si tratta di monete italiane dei primi decenni del X secolo:

- 1 di Berengario (senza titoli), zecca indeterminata ma probabilmente Venezia, 898-900 (per MEC 1, ma datazione da rivedere);
- 1 di Berengario imperator, zecca indeterminata ma probabilmente Venezia, 915-924;
- 1 di Berengario imperator, zecca di Pavia, 915-924;
- 3 di Ugo di Provenza, zecca indeterminata ma probabilmente Venezia, 926-931.

Tutte le monete sono forate, utilizzate come bottoni.

Una delle tre monete a nome di Ugo di Arles, ritenuta in SARAH 2014 con legenda retrogradata, è ridiscussa in GIANAZZA, VAN HERWIJNEN 2016, dove nella legenda del R/ viene ora letto il titolo di imperator.

Cons.: Gap, Musée Muséum Départemental des Hautes-Alpes.

Bibl.: ROMAN 1886 (per una relazione sul ritrovamento dal punto di vista archeologico, con citazione delle monete succinta e imprecisa); SCHULZE 1984 (analisi del complesso dei materiali); Aspres-lès-Corps (Hautes-Alpes, France); COUPLAND 2011, n. 240 (citazione errata); SARAH 2014 (con ripresa dei dati sul contesto archeologico e analisi dettagliata dei materiali monetari); COUPLAND, GIANAZZA 2015, p. 322; GIANAZZA, VAN HERWIJNEN 2016 (per una nuova lettura e conseguente riattribuzione di una delle monete a nome di Ugo di Arles).

(H) Delo/Delos, scavi 1905 (dep.: 54-42 a.C.)

The hoard was unearthed in 1905 during the excavations of the French School in a house near the theatre on Delos. It consisted of 650 coins, one of them of Juba I, while the rest were Roman denarii. The Roman pieces can be divided in two groups, the first with denarii of Republican monetales, dated from 147 to 40, and the second, more numerous, with 604 coins, issued for the legions of Marc Antony. This group provides the dating of the hoard to the period of the battle of Actium. The Delos hoard can be compared with other finds from the Actium area itself and Euboea (Styrra) which show the same composition. Such hoards are rare in Greece (in total, four) and must be closely connected to the movements of Antony's army in the aftermath of the naval battle. The composition of these hoards reminds us of another group consisting of Roman coins alone which have been found for the most part in the region of Macedonia. The deposition of all of them can be dated to particular military events, dating from 54 to 42 B.C., and they all consist of a very large number of denarii issued within the span of a century. The same conclusions can be drawn concerning the Macedonia and Actian finds. The denarii, coming to Greece in the hands of the Roman soldiers, went into everyday circulation through local trade and were then gathered by the local authorities in order to fulfil their obligations toward the state. In turn, Rome paid them back in order to finance her subsequent military enterprise. Thus, we find only a very small number of denarii of this period in local circulation.

(H) Eretria, isola di Eubea, estate 2011 (dep.: 219-254 d.C.)

Nell'estate del 2011, gli scavi della Scuola Svizzera di Archeologia in Grecia / Schweizerische Archäologische Schule in Griechenland (FASE) a Eretria, sull'isola di Eubea, hanno portato alla luce un tesoro di 201 antoniniani databili al 219-254 d.C. Questo tesoro è stato trovato nei bagni termali di costruzione, sul campo "Sandoz" nel settore E / 600 SW (sondaggio IX, FK 288), nel cuore del quartiere romano di Eretria. Risultava disposto contro una parete (M89) che delimitava il bacino di un *impluvium*, nel bel mezzo di un peristilio che dava accesso alle camere balneari.

(H) Samos, loc. Tigani, scavi 1932 (dep.: c. 1175-82)

Tesoro rinvenuto a Tigani (Samos) durante gli scavi condotti da W. Wrede nel 1932, quando fu portato alla luce un recipiente in ceramica contenente 435 monete. Di queste 44 rappresentative delle diverse specie monetarie giunsero al Museo di Atene, costituendo oggetto della pubblicazione di Duplessy e Metcalf del 1962. Qualche anno più tardi lo stesso Metcalf pubblicò un elenco complessivo delle serie comprese nel tesoro, integrato con i dati raccolti ed in parte già editi nel 1935 da Schwabacher.

Composizione: 29 denari di Gien-Dozy; 23 denari di Dijon; 1 denaro di Auxerre; 1 denaro di Tonnere; 3 denari di Troyes; 21 denari di Provins; 1 denari di Meaux; 111 denari di St. Martin de Tours; 113 denari di Anjou; 3 denari di Penthievre; 22 denari di Souvigny; 2 denari di Bourbon; 1 denaro di Vienne; 7 denari di Susa; 89 tra denari e mezzi denari di Melgueil; 1 denaro di Genova, CVNRAD REX (tipo Metcalf I); 1 denaro di Antiochia; 6 denari di Gerusalemme (1 per Baldovino e 5 per Amalrico).

Cons.: Atene, Museo (solo 44 monete).

(SF) Stymfalia, cistercian monastery of Zaraka, excavations 1993-97 (*dep.*: from the late twelfth/early thirteenth to the late fourteenth century)

Twenty-three coins, one reckoning counter, and one coin or coin-like object, which cannot be further defined, were found in the course of the excavations of 1993 to 1997. With the exception of the three earliest coins, the uncertain coin or coin-like object, and the early modern token, the material dates from the late twelfth/early thirteenth to the late fourteenth century. The denominations and issues are in the case of the two Greek and Roman coins what one expects to find among residual materials in close proximity to the ancient city of Stymphalos. The eleventh-century Byzantine coin is only the second piece of evidence currently available – the other being some very small quantities of pottery from the Stymphalos excavations – which suggests some kind of activity in the area during this period. The twenty medieval coins are a characteristic assemblage for a site of the Frankish period in southern Greece.

Composition:

- 1 AE denomination, Sykion;
- 1 AE denomination, Corinth under Caracalla, 198-217;
- 1 follis, Nikephoros III, 1078-81;
- 1 billon trachy, Latin Empire of Constantinople, 1204-61;
- 2 petty denominations, Principality of Achaia;
- 2 deniers tournois, abbey of Tours;
- 1 denier tournois, Kingdom of France, Philip II, 1180-1223;
- 1 denier tournois, Kingdom of France, Louis VIII or IX, 1223-70;
- 1 denier tournois, Principality of Achaia, Mahaut of Hainaut, 1316-21;
- 1 counterfeit denier tournois, post 1316;
- 3 soldini, Republic of Venice, doge Andrea Contarini, 1368-82;
- 6 torneselli, Republic of Venice, doge Andrea Contarini, 1368-82;
- 1 tornesello, Republic of Venice, uncertain doge;
- 1 counterfeit tornesello;
- 1 reckoning counter, Hans Krauwinckel II of Nuremberg, 1586-1635;
- 1 uncertain denomination or coin-like object.

(D) Città del Vaticano, Confessione di san Pietro, scavi ante 1950 (dep.: n.s.)

Deposito di offerte costituito lungo un arco temporale molto lungo. Oltre 1.900 monete recuperate in totale (812 romane, 102 papali, 526 medievali italiane, 460 medievali straniere), tra cui alcuni ritrovamenti singoli/sporadici.

Segnalate:

- Monete anglosassoni
 - 2 *sceat* VII-VIII sec.;
 - 1 denaro AR Ecgbearht del Wessex/Canterbury;
 - 1 denaro AR Aethelwulf/Canterbury;
 - 1 *penny* AR imitazione Sihtric III/Irlanda (989-1029);
- Monete medievali italiane:
 - 1 *tremissis* AV "stellato" Carlo Magno, zecca di Lucca;
 - 1 denaro *antiquiores* AE Stefano VI e Carlo il Grosso (885-888), zecca di Roma;
 - 1 denaro AR Lotario I (840-855), zecca di Pavia;
 - 3 denari della zecca di Lucca per Ottone I e II (cat. Saccocci) o Ottone II/III (cat. Matzke), citati in BALDASSARRI 2021, Appendice B1 n. 9.
 - 2 denari AR/MI di Cremona (1 denaro imperiale e 1 denaro cremonese);
 - 20 denari AR/MI di Milano (1 Berengario I re del tipo con tempio tetrastilo, 888-c. 905/10; 1 denaro largo Berengario I e Arnulfo, 894-96; 4 Ottone I-III, 962-1002; 9 denari enriciani, 1004-1125 e oltre; 3 Corrado II, 1024-39; 1 Gian Galeazzo Visconti, 1378-1402);
 - 40 denari AR/MI di Pavia (1 Lotario I; 17 Ottone I-III; 1 Arduino d'Ivrea, 1002-04; 18 denari enriciani; 3 denari a nome di *fredericvs*, c. 1160-1300);
 - 183 denari AR/MI di Venezia (182 denari enriciani, c. 1082-1164; 1 Giovanni Dandolo, 1280-89);
 - 89 denari AR/MI di Verona (1 Ottone I, 962-73; 71 denari enriciani, 1039-1183; 16 denari crociati, ante 1185-c. 1250; 1 denaro crociato Cangrande della Scala e successori, 1312-36);
 - 10 denari provisini del Senato Romano, I emissione (di cui due indicati come "mezzi provisini"), zecca di Roma;
 - 42 denari provisini del Senato Romano, II emissione (varie tipologie), zecca di Roma;
 - 1 denaro provicino emesso sotto il tribunato di Cola di Rienzo (1347), zecca di Roma;
- Monete medievali straniere
 - 1 denaro AR Ludovico il Pio, zecca francese incerta;
 - 1 obolo AR Ludovico il Pio, zecca francese incerta;
 - 1 denaro AR con legenda incerta (CARLVSRX o CLAROMVNT);
 - 1 denaro AR Ludovico IV d'Aquitania, zecca di Toulouse/Tolosa;
 - 1 obolo AR Lotario, zecca di Meaux;

- 1 obolo AR Roberto, zecca di Parigi (996-1031);
- 1 denaro AR Bernardo Guglielmo, zecca di Bordeaux (984-1010);
- 1 obolo AR Enrico I, zecca di Verdun (919-936);
- 3 denari AR Ottone III e Adelaide, zecca di Goslar o Magdeburgo;
- 1 denaro AR Ottone II, zecca di Worms;
- 1 denaro AR Adalberto II vescovo, zecca di Basilea (999-1025);
- 1 denaro provisino di Thibaut II con oYo;
- altre monete di area franco-germanica-anglosassone e scandinava: sobtato.

L'esame autoptico dei materiali di età carolingia condotto il 18/3/2021 permette di riclassificare alcune monete rispetto a quanto proposto in letteratura:

- il denaro attribuito a Milano per Ludovico I e quello analogo per Ludovico II sono in realtà entrambi emissioni di Ludovico il Pio di zecche incerte, verosimilmente francesi;
- il denaro di Tolosa è di Ludovico IV, non di Ludovico II;
- un denaro assegnato a Carlo il Calvo della zecca Clermont è in realtà una emissione posteriore a Carlo il Calvo, con legenda incerta (CARLVSRX o CLAROMVNT) che non conferma necessariamente una provenienza da Clermont.

Bibl.: SERAFINI 1951, I, pp. 232-233, 239 (1.500 monete); TRAVAINI 1992, pp. 164, 168; [METCALF 1993], p. 78 (moneta anglosassone); ARSLAN 1994, pp. 507, 513; ARSLAN 2000a; [ROVELLI 2000], p. 417; [ROVELLI 2001/1], pp. 842-843; [ARSLAN, MORRISSON 2002], pp. 1266-1267, 1274; SACCOCCI 2001-02, p. 172; ARSLAN 2004i, n. 3230; ARSLAN 2008 (tremisse AV di Carlo Magno); SISSIA, GIARANTE 2013 (per i denari provisini); MEC 12, p. 690 n. 103, COUPLAND, EMMERIG 2019, nota 85 a p. 248 (cita il denaro di Lotario I per Pavia); BALDASSARRI 2021, Appendice A [f] (cita per il tremisse di Carlomagno di Lucca), Appendice B1 n. 9 (per i tre denari di Lucca) e C2 [C] (citando SERAFINI 1951, parla di 628 monete italiane e 460 monete straniere recuperate durante le operazioni di sterro, tra cui 102 denari per Enrico III, IV o V di Lucca, X-fine XII sec. e 4 denari di Pisa, F/PISA, seconda metà XII-inizi XIII sec.); VALCI 2021, p. 206 n. 22 (cita per la presenza di *antiquiores*); MORETTI 2023, p. 140 (cita per la presenza del tremisse di Carlomagno); COUPLAND, GIANAZZA, HUISMAN, FLORISSON 2023, p. 273 (cita);.

HUNGARY

(H) Abasár, n.s. (dep.: post 103 CE)

Small hoard found on the northern edge of the Great Plain, unique in Hungary, as Celtic tetradrachms and small change were hidden along with Roman Republican and Imperial denarii.

The peculiar composition of the hoard suggests the treasure was aggregated by several generations of the owner's family. The silver ingot indicates that the hoard was treated as bullion rather than money, which attests the lack of regular coin circulation in the Celtic Carpathian basin. The Lapujtő type coins of the hoard denote eastern connections, they probably mark the arrival of Celts fed before the Dacians. The Roman coins might indicate the establishment of an ally system as a part of the Augustean foreign politics, and based on the coins it existed even during the reign of Tiberius.

(H) Tótkomlós, 1919, 2016-17 (dep.: 13th century)

The first part of the Kopáncs-puszta coin hoard was found by two farmers in the spring of 1919, while ploughing in the fields around Tótkomlós. According to later estimates, at the time of discovery there may have been at least 400-450 coins in the overturned soil, but the finders only collected some of these, which they then shared out between themselves. One of the farmers soon sold his share, the 235 coins that were preserved and the circumstances in which the collection of coins was discovered were published by Kálmán Eperjesy. The coins he described were all from the Árpád Age, including 120 12th-century Hungarian coins and 115 Friesach dinars.

The research into the Kopáncs-puszta treasure gained new impetus in the autumn of 2016, when György Kerekes, a colleague from the Orosháza Museum used a metal detector with the guidance of the literature and old maps, and succeeded in identifying the original site of the hoard of coins. In the spring of 2017, several colleagues surveyed the site thus identified with metal detectors and, in justified cases, research trenches to find the remainder of the coins. As the site is currently a nature conservation area, nature conservation inspector Gábor Balogh also supervised the work. After a short time, the search began to yield results, and in the course of a few hours, several hundred coins were collected by our colleagues operating the metal detectors. The coins were distributed over an area of 50 by 34 metres. In the south of that area, the metal detectors signalled the presence of a deeper cache containing several coins in the same place. A small ditch was excavated at that spot, and some 30 to 40 cm below the current surface we found the core of the treasure of coins, marked by fragments of the pot that had contained the coins and a group of several tens of coins as well.

A total of 644 silver coins were unearthed, most of them so-called Friesach dinars, but there were also some coins from German mints and the dinars of the Hungarian Kings Géza II and István III. In relation to that we should note that the 1919 finds also included the dinars of István II and Béla III. As a truly special feature, among the Friesach dinars, an English penny was also found among the fragments of the pot's bottom, dated to King John (John Lackland). Including the coins found at that time, the Kopáncs-puszta hoard features a total of 879 coins-excluding those that were sold in the last century. Further research is needed to determine when the cache of coins was originally hidden, but results so far do not exclude the possibility that the large quantity of silver was hidden in the ground as a result of the Mongol invasion. The roughly 100-year period marked out by the manufacture of the coins, their good condition and their significant silver content indicate that the Kopáncs-puszta treasure was probably amassed over an extended period, primarily on account of its silver content. The latter claim may be reinforced by a small piece of jewellery made of silver wire (originally presumably an earring) that was also found near the treasure and within the area in which the coins were distributed, which may have been hidden in the pot along with the coins.

IRAN

(H) Ilam province, n.s. (ante 2015) (*dep.*: c. 602)

In 2015 a London based coin dealer made a group of 474 late Sasanian drachms available for study.

Summary of contents:

- Kavād I (484, 488-97, 499-531): 70 coins, 14.77%;
- Khusrau I (531-79): 29 coins, 6.12%;
- Hormizd IV (579-90): 124 coins, 26.16%;
- Varhrān VI (590-1): 1 coin, 0.21%;
- Khusrau II (590-628): 250 coins, 52.74%.

There are several pointers to this group being part of an unsorted hoard:

- 1. It included a drachm of Varhrān VI (590-1);
- 2. None of the coins appear to have been chemically cleaned as some had black ink graffiti on the obverse or reverse margin, a feature all too often eliminated in the cleaning process.
- 3. There were no coins after year 13 of Khusrau II (590-628). Khusrau's later drachms, especially those dated years 30 to 37, are among the commonest of all Sasanian coins. Had this group been formed from various sources, one would have expected coins from the later period of Khusrau II's reign to have been included.

The earlier issues (years 2 to 13) of Khusrau II are often poorly struck, either from worn dies or because the thin flans do not allow the design to register, creating 'dead spots'. In general though, the coins of Khusrau II are in good condition with limited wear.

The dealer stated that the group was all part of one hoard, which had come from a field in Ilam province in western Iran which had been found in the 1960s and put to one side. Such a claim is impossible to verify: the coins could have been found anywhere in the Middle East from Syria to Afghanistan. The group might have come from the 1967 Shiraz hoard which contained around 37,000 drachms, mainly of Khusrau II, with the latest issues dated year 12 of his reign (601/2). Groups of coins from this massive hoard still reach the market. In the 1960s and 1970s, dealers in Tehran sold them by the cigar box, unsorted, and it is possible that the current group comes from this hoard or another similar hoard. The current group contains a majority of drachms of Khusrau II and ends with two drachms of year 13 (602/3), a date easily confused with year 11.

Cons.: Dispersed, in trade.

Bibl.: MALEK 2015.

IRAQ

(H) **Arbela**, n.s. (ante 2019) (*dep.*: c. 660)

Hoard of 64 Byzantine solidi, dated to the reigns of Phocas, Heraclius and Constans II. The exact archaeological context of the hoard is unknown, but it was found in, or nearby, the modern city of Erbil, ancient Arbela, in Iraqi Kurdistan, Northern Iraq. According to the information received, the hoard is complete and it seems that this is the only important hoard of 7th century Byzantine solidi found in Northern Iraq. The bulk of the coins – 45 solidi – were struck by Emperor Heraclius (610- 641 AD) but 15 solidi are dated to the reign of Phocas (603-610 AD) and 4 more are dated to Constans II (641-668 AD). The hoard was deposited around 660 AD, roughly at the time of the last resistance of the Byzantines to the conquest of Northern Mesopotamia by the Muslim armies. Mintmark, fabric and style of the solidi suggest the series were all issued by the imperial mint of Constantinople.

Cons.: The coins have been sold out and their whereabouts cannot be traced. Also, and as the coins were sold quickly we have only obverses for some of them, the ones numbered from 41 to 60.

ISRAEL

(H) Acre/Acri, 1993-94 (*dep.*: c. 1380 (May 1291 for DE BENETTI 2019a))

Hoard of 30 AV florins, recovered in two groups at the same point on the sea bed during two consecutive seasons of underwater surveys in 1993 and 1994 preceding clearing work east of the medieval harbour of Acre: twenty-one coins were discovered in 1993 and an additional nine were excavated during 1994. Together with the florins, three other gold coins were recovered: a *solidus* dating to the beginning of the reign (641-6) of Constans II and two medieval coins, a Byzantine *histamenon nomisma* of Basil II and Constantine VIII (1005-25), and a North African dinar of the Muwahhid ruler, Abu Muhammad 'Abd al-Mu'min b. 'Ali (AH 524-8/AD 1130-63), minted at the port of Bijayah (Bougie) in eastern Algeria.

The coins were discovered under conditions of controlled dredging. According to the excavators an additional 20 to 30 coins still lay dispersed on the sea bed. Unconfirmed reports speak of another 22 coins found by local fishermen.³⁶ It is likely then that this group of florins belonged to a single hoard of at least 70 or 80 coins that were lost on the sea bed of the harbour. It is highly unlikely that such large quantities of gold coins from a single location are merely chance losses.

The 30 florins in the hoard can be dated to the earlier period of issue (up to 1380) by their style and typology:

- 1. All carry the inscription S. IOHA-NNES. B which is characteristic of coins struck between 1252-1450;
- 2. All belong to the 'small gold florin' type with a diameter of 20 millimetres. These coins were struck before 1422;
- 3. All depict St John wearing an coat of animal hair fringed at the sides and the bottom. These coin types were struck before 1411;
- 4. The *fleur-de-lis* on the obverse of all the coins portrays two W-shaped (unopened) buds with globules attached at each of the three points. These appear on types struck before 1380.

Concerning the florins:

- mint of Florence, *fiorini con santo in stile arcaico* (1252-ca.1267)
 - 1252/II – ca. 1267 (nessun segno): 1 es.
 - 1252/II-ca. 1267 (tre punti a triangolo ad inizio leggenda): 2 es.
- mint of Florence, *fiorini con santo in stile evoluto* (ca. 1267-1303)
 - ca. 1267-ca. 1270 (punto tra i piedi del santo): 1 es.
 - ca. 1267-ca. 1270 (punto entro cerchio): 2 es.
 - ca. 1267-ca. 1270 (crescente con punto): 2 es.
 - ca. 1267-ca. 1270 (trifoglio): 1 es.
 - ca. 1267-ca. 1270 (rosa piccola): 1 es.
 - ca. 1270-ca. 1285 (stella a sei raggi): 1 es.
 - ca. 1270-ca. 1285 (foglia di vite): 3 es.
 - ca. 1270-ca. 1285 (croce?): 2 es.
 - ca. 1270-ca. 1285 (fiore a quattro petali con gambo): 1 es.
 - ca. 1270-ca. 1285 (pigna): 2 es.
 - ca. 1270-ca. 1285 (fogliolina capovolta): 1 es.
 - ca. 1270-ca. 1285 (rapa con foglie): 2 es.
 - ca. 1270-ca. 1285 (rocco): 1 es.
 - ca. 1270-ca. 1285 (croce vuota con quattro punti): 2 es.
 - ca. 1270-ca. 1285 (spiga): 1 es.

Discovery of the find: discovery during archaeological investigations

(oth) **al-Waṭṭa**, n.s. (*dep.:* n.s.)

A total of 666 coins were unearthed during extensive salvage excavations in the densely populated medieval neighborhood al-Waṭṭa (in Arabic: ‘the lower’), on the western slope of Safed. After cleaning the coins, 447 were deemed identifiable: 289 single coin finds, and two hoards: one (Hoard A) comprising 125 silver *dirhams* and *grossi* concealed in an earthenware container, and another, smaller hoard (Hoard B) of 33 copper *fulus*.

The coins came from three of the four identified strata (III-I) discovered in three excavated areas (A-C).

- *Stratum III*. In this layer, 46 identified coins were found among a dense concentration of collapsed Mamlūk-period structures. According to the excavators, the structures were destroyed in a catastrophic event—an earthquake and subsequent conflagration. Most of the coins were found concentrated in the remains of a large multi-storied structure (Building B) and in the adjacent fissured remains of rooms, walls and stone collapse. Together with these, a ceramic container with silver coins (Hoard A) was discovered on the lower floor of Building B. Significantly, virtually all the isolated coins came from a destruction layer of thick ashes covering the above-mentioned remains (L215, L221, L242, L245). The largest group of these are dated coppers of the third reign of Al-Nāṣir Muḥammad (AH 709-741/1309-1341 CE), Maṣṣūr Abu Bakr (AH 741-742/1341 CE) and al-Ṣāliḥ Ismā’il (AH 743-746/1342-1345 CE). This group of coins also contains scores of difficult to identify Mamlūk coppers, which were roughly dated to the fourteenth-fifteenth centuries CE. The two latest identifiable *fulus* are from the reigns of Ḥajjī and Barqūq and are dated to 1388-1389 CE. According to the numismatic material, the destruction of Stratum III does not seem to have occurred prior to the last decade of the fourteenth or early fifteenth centuries CE. Such an event could possibly be linked to the string of seismic shocks and earthquakes documented in Syria in 1399 CE, and during the first decade of the fifteenth century CE.
- *Stratum II*. This stratum yielded 111 identified coins. These were excavated from among the rebuilt (but fairly few and scanty) remains of structures constructed over the previous stratum. The isolated coin finds come mostly from contexts without noticeable stratigraphy. Despite the considerable number of early fourteenth-century CE *fulus*, the loci in Stratum II mostly contained a repertoire of late fourteenth- and fifteenth-century Mamlūk *fulus* from the reigns of Sha’bān II (AH 764-778/1363-77 CE) till Faraj (AH 809-815/1406-1412 CE). The latest datable coins in this layer are a single *fals* of one of the last Mamlūk sultans, Qānṣūh al-Ghūrī (AH 906-922/1501-1516 CE), and some early Ottoman *manghir* of Sulaymān I (AH 926-974/1520-1566 CE). The dating suggested by the isolated finds is matched by that of a small hoard of 33 coppers (Hoard B) found wedged between two parts of a wall (L125, B1105). This hoard consists of mostly irregular-shaped fifteenth-century CE Mamlūk *fals*. The date of the deposit is based on a single *manghir* of Sulaymān I (AH 926-974/1520-1566 CE) after AH 955/1548 CE.
- *Stratum I*. A total of 132 coins were found in mixed surface layers of erosion and modern

debris. The coins are mostly fourteenth-fifteenth-century Mamlūk *fulus* and seem to mirror the date range of the finds in Strata III and II.

Among the coins discovered, we can highlight:

- isolated finds

- Two are residual finds from earlier periods: a bronze coin of Alexander Jannaeus (104-80/79 BCE) and a coin of Julian II Caesar (355-361 CE). These two coins were found together with mostly fourteenth-fifteenth century CE Mamlūk surface finds in unstratified layers of erosion and modern debris. The four remaining coins are small Cypriot, Venetian and Genoese coppers, dating to the fourteenth century CE. Among the miscellaneous coins is a fourteenth-century CE Genoese *quartari*. This find is particularly intriguing. Despite the dominant presence of Genoese merchants in the Levant for more than 400 years (between the twelfth and the fifteenth centuries CE), hardly any coin finds from Genoa have been noted in the Eastern Mediterranean basin in excavations or hoards.

- Hoard A: A Mixed Silver Hoard of *Grossi* and *Dirhams*

- The hoard was stored in an earthenware receptacle ('money box') which contained 125 silver *dirhams* and *grossi* of Venice. The vessel was found in the collapsed multi-storied Building B, below the destruction level of Stratum III. The silver *grossi* consist exclusively of the earliest Type I issues, struck in the Venice mint between 1200 and 1355 CE. The Type I obverse shows the full-height facing figure of the robed doge and St. Mark (the city's patron saint), the latter appears haloed, facing and holding a long standard between himself and the doge. The reverse depicts Christ seated on a square-backed throne holding a book. These coins noticeably contrast with the later, lighter Type II issues (produced after 1379 CE) and Type III series (late fourteenth-early fifteenth centuries CE), on which the doge stands in profile. These last two types (II and III) are absent from the hoard.

- Hoard B: A Copper Hoard

- The second hoard found in the al-Waṭṭa excavations consists of 33 coppers. This small hoard was found wedged between two parts of a wall (L125, B1105), constructed during the partial rebuilding of several structures after the earthquake's destruction of the area (Stratum II). Its latest datable coin is a *manghir* of the Ottoman Sultan Sulaymān I minted after AH 955/1548 CE. Therefore, the hoard was deposited somewhere after the 1570s, when Safed was already under Ottoman rule. Interestingly, the hoard contains mid- and late-fourteenth century Mamlūk *fals* and regular and irregular-shaped late fourteenth/fifteenth century fractions, many of them barely identifiable, and only one genuine Ottoman *manghir* copper.

(SF) 'Atlit, castello dei Pellegrini, n.s. (*dep.*: V sec. a.C. – XIII sec.)

Nell'area sulla costa a c. 20 km a sud di Haifa, 509 monete, tra cui: 102 esemplari dei Crociati; 37 europee dei sec. XII-XIII; 55 dei re crociati di Cipro; 1 dell'Impero Latino di Costantinopoli; 7 della Armenia cilicia; 11 gettoni di piombo; 133 islamiche, 131 pre-Islamic dal 500 a.C. al 408 d.C.; 27 bizantine fino al 602 d.C.

Tra le monete europee, notare:

- 1 denaro AR della zecca di Venezia, non identificabile ma databile tra la fine del XII e l'inizio del XIII secolo;
- 1 denaro AR della zecca di Lucca del XII secolo (tipo MATZKE 1993, p. 44 nn. 13-14);
- 7 monete MI del Regno di Sicilia (zecche di Brindisi/Messina/Palermo) a nome di Federico II di Svevia, 1 a nome di Carlo I d'Angiò, oltre a un ulteriore esemplare illeggibile.

(SF) Caesare Marittima, Eastern Circus, n.s. (*dep.*: I-IX centuries CE)

During the excavations at the Eastern Circus, 44 coins were discovered, 31 of which were identifiable. The dates of the coins range from the first century CE until the ninth century CE (Abbasid period). The coin types are rather conventional and do not deserve special discussion. It should be emphasized, however, that all the Roman Provincial coins discovered at the site were struck in Caesarea.

Among the Byzantine coins worthy of mention are a *decanummium* of Justinian I, most probably dated to 547/548 CE and three examples of *dodecanummia* minted in Alexandria, frequently found in Caesarea (with a cast imitation). Among the Abbasid coins is a rare fals minted by Governor Dinar Ibn 'Abd Allah in Lod, dated to 825 CE.

(H) Ḥorbat 'Aqrav, 1970 (*dep.:* c. 110 BCE)

A hoard discovered in 1970 in Upper Galilee contained silver coins of Antiochus VII and Demetrius II minted in Tyre, as well as autonomous sheqels of Tyre. The 20 coins described form less than half of the original hoard and span 28 years. It is suggested that this emergency hoard was buried around 110 BCE and is connected with the Hasmonean penetration into Galilee, before its annexation to the Hasmonean state.

(H) Huqoq, 2018 (*dep.:* post 1423)

Notizia del rinvenimento di 364 AV+AR, con pezzi di gioielleria (anelli e orecchini) nei resti di una sinagoga medievale vicino al mare di Galilea in Israele. Le monete erano in due brocche nascoste sotto il muro crollato dell'edificio.

La maggior parte delle monete risalgono al periodo della Repubblica di Venezia e del sultanato mamelucco. Gli esemplari più antichi risalgono al regno del doge Francesco Dandolo (1329-1339) e i più recenti all'epoca di Francesco Foscari (1423-1457). Alcune delle monete mamelucche furono coniate al tempo del sultano al-Ashraf Barsbay (1422-1438).

(SF) Jerusalem/Gerusalemme, scavi novembre 2010 – aprile 2011 (*dep.:* II sec. a.C. – metà XIV sec.)

The archaeological excavations conducted by the EBAF of Jerusalem between November 2010 and April 2011 in the area of the Greek-Orthodox Church of Saint John the Baptist, in the centre of the Holy City, led to the recovery of 78 coins and 1 seal probably from the Ottoman era. The coins cover a very lengthy period from the 2nd century B.C. to the mid-14th century, with particular concentration during three periods (Asmonean, Late Roman and imitations, Byzantine) but there are also a significant numismatic documentation of the Umayyad era.

Discovery of the find: discovery during archaeological investigations

(SF) Khirbet Shema', sinagoga, scavi 1974 (dep.: secc. VI, XII-XIII)

Da scavi nella sinagoga (elenco parziale):

- 6 monete bizantine (notato follis di Anastasio I, che costituisce la moneta più antica);
- 37 monete islamiche databili al 700-830 AH (1156-1277), principalmente di area siriana;
- 6 monete di età tardo medievale, databili al 1162-1250:
 - denaro MI, Ugo III di Borgogna (1162-92), zecca di Digione;
 - denaro MI, William I di Chauvigny (1203-33), zecca del forte di Chateauroux;
 - denaro AE, Federico II di Svevia (1197-1250), zecca di Brindisi o Messina;
 - mezzo denaro MI, Federico II di Svevia (1197-1250), zecca di Brindisi o Messina;
 - denaro, zecca di Damietta (Egitto) coniato durante l'occupazione della città da parte dei Crociati nel 1219-21;
 - grosso AR, doge Marino Morosini (1249-53), zecca di Venezia.

Il mezzo denaro di Federico II di Svevia presenta legende D/ IMPERATOR ROM e R/ IERSP ET SICIL R, ed è ritenuto da BATES 1974, p. 166 *apparently novel, although a corresponding denaro is known as well as half-denaro of the same period with a variant inscription.*

Discovery of the find: discovery during archaeological investigations

(H) Rehob, a few meter south of the synagogue, 1968 (*dep.*: post 686)

A hoard of 28 seventh-century solidi was accidentally discovered in 1968 a few meters south of the synagogue of Rehob (H. Parwa). The hoard was first published by Paltiel in 1968-1969; only ten of the coins are registered at the IAA Coin Department. Although a stray find, this hoard cannot be disconnected from a hoard of copper Arab-Byzantine coins discovered during excavations in the synagogue itself. The two hoards are contemporaneous and their deposition dates should therefore be related to the same historical context.

ITALIA

(UNSPECIFIED)

(H) (località imprecisata), paulo ante 1869 (dep.: XIII sec.)

Ripostiglio, di provenienza ignota e composizione incerta, con monete delle zecche di Trento (tra cui 1 grosso con la F), Verona, Brescia, Mantova (37 emissioni vescovili anonime con con legende MANVE e +EPISCOP).

In PORTIOLI 1869 (p. 14) si riporta: *Pochi anni sono potei avere un piccolo ripostiglio di monete d'argento medievali, di recente scoperto dalla terra, nel quale vi erano un grosso d'argento di Federico Wanga, col busto del Vescovo benedicente da una parte e la F dall'altra ed alcune monetine parimenti di Trento corrispondenti nel peso al N. 6 [denaro della zecca di Mantova con legende MANVE e +EPISCOP] , alcune di Verona di valore eguale a queste ultime, alcune altre di Brescia colla croce da un lato e l'effigie di Federico Enobarbo dall'altro assieme a 37 vescovili [di Mantova] tutte del N. 6. Ruspe e belle sono le trentine le veronesi e le bresciane; mancanti e sdrucite le mantovane. Io le conservo tuttora presso di me, e questo confronto di conservazione, ed il loro numero, mi fanno supporre le mantovane più antiche di tutte le altre. Queste poi messe a confronto di quelle degli altri cinque numeri [altri denari mantovani anonimi proposti dall'autore nel testo] dai caratteri artistici e paleografici, si scorgono ben più recenti, di esse mentre queste ultime si riscontrano assai più vicine alle pavesi di Enrico I che non a quelle di Federico I.*

Cons.: Entrato inizialmente nella collezione di Attilio Portioli, successivamente disperso.

Bibl.: PORTIOLI 1869; TONDO 1995, p. 252 (cita).

Discovery of the find: discovery with metal detector

(H) località imprecisata (Puglia?), n.s. (dep.: anni '70 del XIII sec.)

Nelle collezioni civiche di Manfredonia (FG) sono presenti sette fiorini d'oro della zecca di Firenze che sembrano formare un insieme omogeneo per stato di conservazione e cronologia di emissione. Un documento conservato presso il Comune ne attesta la presenza in collezione almeno dal 1953, insieme ad altre due monete d'oro: un mezzo augustale della zecca di Messina e un *tari*. Non è da escludere che l'insieme possa aver fatto parte di un ripostiglio non documentato, databile entro gli anni '70 del XIII secolo.

Cons.: Manfredonia, Collezioni Civiche.

Bibl.: DE BENETTI 2024, p. 33.

(SF) Sella del Valoria (comuni di Berceto, PR e Pontremoli, MS), scavi 2011-15 (*dep.*: IV sec. a.C. – XVIII sec.)

Tra i materiali rinvenuti nell'area sacra della Sella del Valoria, 286 reperti monetali, per la maggior parte completamente illeggibili. Ad esse si devono poi aggiungere altri trentadue frammenti di forma irregolare e di piccole o piccolissime dimensioni. Malgrado non si possa averne la certezza, è ragionevole pensare che anche in questo caso si tratti di materiale numismatico, forse già in origine di dimensioni ridotte e poi ulteriormente corroso dal rito lustrale al quale fu sottoposto in antico e dalla lunga permanenza nel terreno acido.

Nel complesso, le monete recuperate si possono così suddividere:

- 2 monete – una in argento e una in bronzo – appartengono alle emissioni della zecca di Massalia (odierna Marsiglia). La moneta in argento è la più antica tra quelle rinvenute nello scavo e si data a circa la metà del IV sec. a.C., mentre la seconda fu emessa probabilmente tra fine del III e la metà del II sec. a.C. I due esemplari massaloti sono un obolo del tipo “a la roue” (R 385) e un piccolo nominale eneo con toro cozzante (R 371).
- 193 monete sono verosimilmente romane d'età repubblicana. Di esse 180 sono enee e tredici sono in argento. Il periodo complessivo è compreso tra la fine del III sec. e gli ultimi decenni del I sec. a.C. Vi sono poi altre dodici monete in bronzo, con modulo compreso tra ca. 20 e 10 mm e con pesi variabili da ca. 4 g a ca. 0,5 g il cui cattivo stato di conservazione (alcune anche frammentarie) non consente per il momento di deciderne l'attribuzione, se alla fase tardo-repubblicana o al IV secolo d.C.
- 4 monete – una in argento e tre in bronzo – sono sicuramente d'età giulioclaudia (I secolo d.C.), ma con i tre nominali enei problematici per quanto riguarda la data di interrimento. Altri due pezzi, totalmente illeggibili, sono stati attribuiti con riserva ai secoli I-II d.C.
- 83 monete potrebbero essere di IV-V secolo d.C., ma anche in questo caso, a causa della loro completa illeggibilità, la datazione è proposta con cautela: il recupero, soprattutto nella campagna di scavo del 2013, di quadranti, trienti e once (?) repubblicane di piccole dimensioni e pesi molto bassi fa infatti sorgere il sospetto che in diversi casi possa trattarsi di materiale di I sec. a.C. già in origine di dimensioni e pesi ridotti e in seguito ulteriormente rimpicciolito dal processo di corrosione.
- 2 monete erratiche dopo il restauro sono risultate essere *parpagliole da soldi 2* in mistura della zecca di Genova databili alla prima metà del XVIII secolo. Sono entrambe molto usurate, indizio di una prolungata circolazione.

Bibl.: GHIRETTI, BOTTAZZI, BAZZINI, PUTZOLU, MARAS 2013 (presentazione preliminare, solo poche monete descritte e illustrate); BAZZINI 2017 (catalogo completo); LUSUARDI SIENA, DELLÙ, BONA, VALENTE 2019, p. 75 (cita).

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(SF) Campo Imperatore, chiesa di sant'Egidio, scavi 2010 (*dep.: ultimo quarto XII secolo – 1739*)

Da un'indagine archeologica ai ruderi della chiesa (ante XII sec.) di sant'Egidio a Campo Imperatore (L'Aquila) condotti nell'estate 2016, 80 monete (4 AR, 42 MI, 34 AE) coniate tra l'ultimo quarto del XII secolo e il 1739. Zecche di Ancona (4 es.), Ascoli (1), Bologna (3), Brindisi (1), Firenze (1), Gubbio (2), L'Aquila (16), Lucca (2), Montefiascone (1), Napoli (14), Napoli o altra zecca minore (1), Ravenna (3), Roma (20), Sulmona (1), Urbino (1), Venezia (1). Notati 4 possibili falsi d'epoca.

79 monete rinvenute nelle UU.SS. sovrastanti gli ambienti diruti della chiesa; 1 moneta rinvenuta nel massetto pavimentale di malta, nell'ambiente del presbiterio.

Insieme alle monete sono stati rinvenuti reperti di vario genere, riferibili alle attività umane dei pastori transumanti che stanziavano sull'altopiano nei periodi climatici più favorevoli: 2 elementi lapidei, centinaia di frammenti ceramici (acroma semidepurata, invetriata, maiolica, tegole, coppi), 20 materiali metallici di vario genere (2 chiavi, 12 chiodi da carpenteria, 4 chiodi da ferratura, 1 ferro di cavallo, 1 ferro di bovino), 5 palle metalliche per archibugio o moschetto, 3 anelli, 2 elementi metallici decorativi (1 fibbia, 1 borchia), 6 bottoni (2 in osso, 4 metallici), 1 medaglietta votiva metallica, 3 grani di rosario (1 in osso, 2 in pasta di vetro).

(SF) Collecervino, 1867 (*dep.*: 1197? 1243?)

One or two parcels of hoards, mixed with stray finds. 15 denari of Henry and Constance, 1 denaro of Frederick II (Travaini n. 35). The larger group of material published as a hoard contains a great variety of coins of different periods, which make its status very uncertain. Besides a Norman follaro of Gaeta of William II, and the Hohenstaufen denari already mentioned, the other coins, possibly from different finds in the area, are: 1 denier tournois of Sulmona of Charles III, 1 cella of Joanna II with legend *Regina Iova* (Ortona?); 1 coronato of L'Aquila and 1 tornese of Ferrante of Aragon; 1 cavallo of Frederick III overstruck on 1 of Charles VIII. The foreign coins are: 1 denaro of Verona; 1 quattrino of Pier Luigi Farnese of Castro (1537); 1 of Francesco Sforza of Fermo; 1 quattrino of Macerata; 1 denaro of Ravenna; 1 bolognino of Pope Urban V; 1 denier tournois of Tours (c. 1200?).

(H) Valle Castellana, loc. Vroga della Caccia, paulo ante 11 aprile 2021 (dep.: secc. XI-XIII)

Il giorno 11 aprile 2021 i carabinieri forestali della Stazione Parco di Rocca Santa Maria sono stati contattati da alcuni escursionisti che nel percorrere il sentiero CAI n. 411 che da San Angelo a Ripe conduce a Castel Manfrino in località "Vroga della Caccia" del Comune di Valle Castellana hanno rinvenuto 209 monete in un sentiero. Giunti sul posto i militari le hanno contate e preso in carico. Nei giorni successivi, al fine di evitare che la zona potesse essere oggetto di ricerche abusive, si è provveduto a sorvegliare l'area e, in uno dei sopralluoghi effettuati, sono state rinvenute altre 99 monete della stessa fattura delle prime e nella stessa località che si trova all'interno del Parco Nazionale del Gran Sasso e Monti della Laga. I carabinieri forestali hanno informato la Soprintendenza che, da una prima visione dei reperti, ha ritenuto di ipotizzarne la datazione nel periodo che va dall'anno 1000 al 1200 d.C.

Complessivamente, dunque, il ripostiglio risulta costituito da 308 AR+MI. Dalle prime fotografie a disposizione vi sarebbe ampia presenza di denari AR di tipo enriciano della zecca di Lucca.

Cons.: Teramo, Soprintendenza Archeologica, Belle Arti e Paesaggio per le Province di Chieti e Pescara.

Nature of the site at the time of concealment or loss: necropolis / cemetery

(uns) Matera, piazza San Francesco, scavi 1903 (dep.: n.s.)

Da scavi condotti da Ridola nel 1903, nucleo variegato di più di 1.000 monete, soprattutto bizantine di rame, ma anche romano-imperiali, sveve, spagnole sino al XIX secolo.

Notati:

- moneta bizantina

- *pentanoumion* AE Giustiniano I/Roma (*DOC* I, p. 177, 327.1-327.4 [538-544]; MORRISSON 1970, 4/Ro/AE/24-25; *MIB* I, 246 [540-552; zecca di Sicilia]);
- *miliaresion* AR Teofilo e Michele II/Napoli (?) (simile a *solidus* AV MORRISSON 1970, tav. LXXIV, 1, 2, p. 531);
- *follis* AE Teofilo/Costantinopoli (*DOC* III, 1, pp. 435-438, 15a.1-15d.7 [830/1-842]; MORRISSON 1970, 32/Cp/AE/04-14);
- *follis* AE Basilio/Costantinopoli (*DOC* III, 2, pp. 500-501, 12.1-12.8 [879-886]; MORRISSON 1970, 34/Cp/AE/01-04);
- *follis* AE Basilio I e Costantino/zecca incerta (MORRISSON 1970, tav. LXXV, 5, p. 547);
- 5 *follis* AE Basilio I e Costantino/Costantinopoli (MORRISSON 1970, tav. LXXV, 5, 11, p. 544: tipi 2a e 2b);
- 12 *follis* AE Basilio I, Costantino e Leone (VI)/Costantinopoli [870-879; con Akakia e senza Akakia] (*DOC* III, 2, pp. 499-500, 11.1-11.17 [870-879]; MORRISSON 1970, 34/Cp/AE/12-23);
- 22 *follis* AE Leone VI/*Constantinopolis* (*DOC* III, 2, pp. 515-516, 5.1-5.8; MORRISSON 1970,

35/Cp/AE/14-55);

- 5 *follis* AE Leone VI e Alessandro/*Constantinopolis* (886-912) (*DOC* III, 2, pp. 516-517, 6.1-6.23; MORRISSON 1970, 35/Cp/AE/04-13);
- 228 *follis* AE Costantino VII e Zoe/*Constantinopolis*(913-919) (*DOC* III, 2, pp. 559-560, 22.1-22.23 [914-919]; MORRISSON 1970, 37/Cp/AE/01-24);
- 11 *follis* AE Costantino VII/*Constantinopolis*(919-920)(*DOC* III, 2, pp. 560-561, 23.1-23.6 [920-931]; MORRISSON 1970, 37/Cp/AE/25-30);
- 7 *follis* AE Romano I/*Constantinopolis*(920-944)(*DOC* III, 2, pp. 563-564, 25b.1-25b.24 [931-944]; MORRISSON 1970, 37/Cp/AE/48-54);
- *follis* AE Costantino VII/*Constantinopolis*(945 ca-950) (*DOC* III, 2, pp. 565-567, 26.1-26.28; MORRISSON 1970, 37/Cp/AE/55-64);
- 7 *follis* AE anonimi Cl. A;
- 3 *follis* AE anonimi Cl. B;
- *follis* AE anonimo Cl. C;
- *follis* AE anonimo Cl. C.

- moneta araba

- si è occasionalmente parlato della presenza di un *tari* d'oro di imitazione di un *rubā'i* di al-Mu'izz (953-975)(SPAHR 1976, tav. XV, 10, p. 110), ma un esame autoptico condotto da B. Gargiulo ha potuto appurare che si tratta in realtà di una frazione di *dirhem* d'argento siciliana o africana (SARCINELLI 2023, nota 45 a p. 169).

Bibl.: [BRACCO 1950], p. 158, nota 3 (due monete bizantine negli sterri: fine IX-inizio X); PADULA 1999-2000, p. 49 (scavi del Ridola del 1904 nelle fondazioni del nuovo seminario interdiocesano, vicino alla Cattedrale, *buon numero di monete bizantine attestanti il dominio di quella gente*); [SALVATORE 1986], pp. 124-135; [ARTHUR 2002], p. 136 (cita); [CALLEGHER, MORRISSON c.s.]; ARSLAN 2004i, nn. 4140 e 4150; TRAVAINI 2016, n. R1; SARCINELLI 2023, p. 169 (cita, dando precisazione sulla moneta araba).

(SF) Policoro, area archeologica di Heraclea, necropoli meridionale, n.s. (*dep.*: IV-III sec. a.C.)

In necropoli, monete da 257 tombe su c. 1.600 investigate, per un totale di 277 esemplari identificati (dati aggiornati in base a SARCINELLI, TRAVAGLINI 2019). Notati numerosi esemplari proprio della colonia di *Heraclea Lucania*. Le monete datate al IV e III sec. a.C. sono state rinvenute esclusivamente in sepolture a inumazione, mentre iniziano a comparire, anche se raramente, nelle tombe a incinerazione nella seconda metà del secolo successivo.

Delle 229 monete identificate, la maggior parte (156) sono in bronzo e sono state coniate a *Heraclea*. 89 di esse (il 39% del totale delle monete recuperate e il 57% di quelle attribuite alla

zecca della città) presentano al dritto un vaso con pareti scanalate e al rovescio un oggetto indefinibile, variamente interpretato dagli studiosi come fibula, trappola per uccelli o arco e faretra. Laddove è possibile ricostruire il contesto, è chiaro che queste monete si trovano in sepolture datate a un periodo compreso tra la seconda metà del IV e l'inizio del III sec. a.C.. Seguono, in termini quantitativi, le monete con la "testa di Eracle/arco, clava e faretra" (46 es., il 20% del totale e il 29% di quelli conati in città), una tipologia attestata per tutto il periodo di utilizzo della necropoli.

Un'altra caratteristica di rilievo è il gran numero di monete d'argento di basso valore provenienti da Tarentum: 55 es. (24% del totale delle monete identificate), datati principalmente a un periodo compreso tra la fine del IV e la fine del III sec. a.C., con l'eccezione di un piccolo numero di reperti della fine del V – inizio del IV sec. a.C.. Sono presenti anche 11 monete di bronzo da Metaponto, datate a un periodo compreso tra la fine del IV e la metà del III secolo (ad eccezione di un solo esemplare della fine del V – inizio del IV secolo a.C.). Infine, vi è un'unica moneta di bronzo da Thurium, datata al IV secolo, oltre a monete coniate a Kerkyra (1) e dai Molossi (3), purtroppo rinvenute in contesti per i quali non è disponibile una descrizione pubblicata.

In genere viene rinvenuto un solo esemplare per sepoltura, anche se non mancano casi di più monete, per lo più associate a deposizioni multiple. Tra questi: due monete nella bocca di un individuo maschile affiancato da uno scheletro femminile (tomba 31, *Via Latina*) e tre monete "appartenenti" allo scheletro più recente di una doppia deposizione (tomba 9, *Via Belluno*). La tomba 133 di *via Umbria*, contenente uno scheletro in connessione anatomica e i resti di vari altri individui spostati, ha restituito sei monete datate approssimativamente a un periodo compreso tra l'ultimo quarto del V secolo e il II secolo a.C.. Tuttavia, poiché non ci sono informazioni sul posizionamento dei singoli reperti, non possono essere utilizzati per determinare eventuali differenze temporali nell'uso della tomba, i cui altri corredi possono essere datati al II e al I sec. a.C.

Per 27 reperti è possibile ricostruire la posizione all'interno della tomba: nella quasi totalità dei casi, la moneta in quasi tutti i casi la moneta è in bocca o molto vicina alla testa del defunto. In due sole tombe è collocata accanto agli arti inferiori o al bacino.

Bibl.: SARCINELLI, TRAVAGLINI 2017 (presentazione preliminare); SARCINELLI, TRAVAGLINI 2019 (analisi generale, senza catalogo dei materiali).

(H) Tiriolo, loc. Gianmartino, scavi 2015 (dep.: 216-203 a.C.)

Durante lo scavo di un grande edificio riferibile alla cultura dei Brettii e databile tra il IV e il III secolo a.C. sono state recuperate 110 monete puniche d'argento e 175 monete di bronzo (per lo più brettie).

Le monete puniche e alcuni gruppi di monete di bronzo erano chiaramente raggruppati, con un evidente intento di tesaurizzazione.

- un tesoretto di 19 bronzi brettii (17 doppie unità, una unità, una mezza unità) databili tra il 214 e il 203 a.C., a cui si aggiunge una mezza unità emessa dai Lucani tra il 209 e il 207 a.C. è stato recuperato nell'US 160, sul fondo di uno dei *pithoi* fracassati nell'ambiente vasca/atricio;
- un tesoretto di 36 monete enee brettie, delle quali nove ancora nascoste dietro le decorazioni di un capitello d'anta, impilato con altri tre capitelli in prossimità della soglia d'ingresso Sud del grande ambiente A, le restanti 27 cadute ai piedi della pila di capitelli, ma appartenenti quasi certamente allo stesso gruzzolo. Sono tutte unità con testa di Zeus / aquila e mezza unità con busto di Nike / Zeus su biga.

Le restanti monete apparivano più o meno sparse all'interno di altre UUS: la 169 (che ha restituito anche alcuni oggetti in bronzo: frammenti di una situla, manici, forse una base d'appoggio) e la 179; lo stesso strato di distruzione US 180 ha restituito un consistente nucleo di ben 47 bronzi brettii, 36 doppie unità, nove unità, una mezza unità e un quarto: non è escluso che si possa trattare di ulteriori aggregati simil-gruzzoli.

Solo otto monete sono attribuibili rispettivamente alla I emissione (un esemplare) e alla II (sette esemplari) databili tra il 216 e il 214 a.C. ca. Le restanti si collocano nella stragrande maggioranza nella IV emissione:

- Gruppo della 'spiga di grano', 214-ca. 211 a.C.;
- Gruppo del 'fulmine', ca. 211-208 a.C.;
- Gruppo dell' 'aratro', ca. 211-208 a.C.;
- Gruppo della 'lira' e emissioni finali, ca. 208-203 a.C.

40 monete non sono collocabili all'interno dei vari gruppi a causa del pessimo stato di conservazione, che non ha permesso di leggerci gli eventuali simboli: si tratta però di 38 doppie unità con testa di Ares / Athena incedente e due unità con testa di Zeus / aquila con ali aperte, che si datano a partire dal 211 a.C.

Tutte le monete sono andate perdute o tesaurizzate poco prima che un violento incendio distruggesse l'edificio, evento quasi certamente da collocare nel periodo annibalico, durante la resistenza di Annibale e dei suoi alleati brettii contro Roma (216-203 a.C.).

Precedenti scavi in un'area limitrofa avevano portato alla scoperta di cinque monete bianche in bronzo, ancora unite dai gambi di fusione, che potrebbero documentare l'esistenza di una zecca

nella zona per la produzione di monete.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: urban settlement (oppidum, colony, town)

(H) Tiriolo, loc. Pedadace, 1925 (dep.: tra il 203 e il 200 a.C.)

Ripostiglio, contenente tra le 160 e le 200 monete, immediatamente distribuite tra gli operai che le avevano rinvenute. A seguito dell'intervento dei carabinieri furono recuperate 105 monete puniche (103 quarti di *shekel* d'argento e due bronzi con testa di Apollo / protome di cavallo), associate a quattro bronzi brettii (due doppie unità con testa di Ares / Athena incedente, e due mezze unità con busto di Nike / Zeus su biga).

Il ripostiglio fu presumibilmente occultato in concomitanza con la partenza di Annibale dall'Italia o poco dopo, tra il 203 e il 200 a.C.

Cons.: Reggio Calabria, Museo Archeologico Nazionale.

(SF) Laino Borgo, loc. S. Gada, scavi 2018-19 (dep.: IV sec. a.C.)

Dal *plateau* di S. Gada – dove sono emerse tracce archeologiche che evidenziano una frequentazione databile tra VI e la prima metà di III secolo a.C. – è stata recuperata una decina di monete, oggi custodite presso la sede del Comune di Laino Borgo.

- Dallo strato superficiale dell'area di scavo del 2019, rimescolato per le attività agricole, è emerso un esemplare bronzeo riconoscibile come appartenente alla zecca lucana di *Laos*. Si tratta di un nominale bronzeo eccezionalmente pesante 11,35 g dal diametro di circa 21-22 mm, anch'esso sopra la media tra gli esemplari conosciuti di questa emissione monetale, caratterizzato al diritto da una testa femminile con capelli sollevati e raccolti con orecchino e collana rivolta a d. e al rovescio da un volatile, presumibilmente identificabile in un passero (*Monticola solitarius*), anche per la possibile assonanza col nome $\lambda\alpha\acute{\iota}\omicron\varsigma$; monetale a d. in basso sembra potersi riconoscere una testa di ariete come simbolo. La leggenda $\Lambda\text{AIN}\Omega\text{N}$ che dovrebbe trovarsi al rovescio della moneta non appare leggibile.
- Da un accumulo successivo alla frequentazione, collegato ad un repentino abbandono con conseguente crollo delle strutture, forse a causa di un sisma, è emerso un esemplare bronzo della zecca di *Thourioi* dal peso di circa 1,16 g e largo 9 mm con al diritto la testa di Atena volta a d. con elmo attico crestato e al rovescio un bucranio frontale decorato con bende con leggenda; sulla sommità della testa del bue è visibile la leggenda ΘOY .
- Da contesto stratigrafico più puntuale, poiché all'interno dello strato di abbandono del vano A appartenente al complesso abitativo in uso durante il IV secolo a.C. ed abbandonato repentinamente alla metà del III secolo a.C., proviene un altro bronzo più piccolo di *Laos* di circa 2,77 g e un diametro di 13-14 mm – anche questo con dimensioni maggiori della media per questa emissione – con al diritto la testa femminile velata frontale e al rovescio due uccelli passeriformi incrociati. Le attuali condizioni della moneta non permettono di individuare con sicurezza le lettere presenti, sebbene sembrino distinguersi Δ a d. della testa femminile del diritto e sul rovescio O (omicron) nel campo in alto a d. in prossimità del becco di uno dei due uccelli.
- Di eguale provenienza specifica è un altro esemplare bronzeo di 5,79 g e 18 mm di diametro, purtroppo non ben leggibile perché molto consunto, ma dai cui contorni dei tipi sembrerebbe potersi scorgere una testa elmata di Atena a d. e un toro cozzante o incedente a d. su linea di esergo, come nei bronzi di modulo inferiore di *Thourioi*.

All'interno di uno strato relativo alla copertura di tegole e coppi, è stato trovato un analogo bronzetto di *Thourioi*, di circa 0,67 g e 9-10 mm, nel quale all'interno del campo monetale a sinistra del bucranio si scorge una lettera.

- Per l'esemplare di 3,11 g e 14 mm di diametro proveniente da uno strato di accumulo di area 2000, esso sembra potersi scrivere alla serie bronzea metapontina con Atena Alkidemos e

civetta, quest'ultima ad ali chiuse volta a s. con testa frontale appena riconoscibile insieme con una spiga posta alla sua s.

- Ulteriori esemplari bronzei – in totale quattro monete, di cui una irrimediabilmente illeggibile, le altre ancora in attesa di intervento di pulitura – provengono da altrettanti settori dello scavo.

Studiosi locali segnalavano già una schiacciante preponderanza di esemplari delle zecche di Laos e di Thurii dall'area di Laino Borgo, in particolare dalla frazione di S. Gada, rinvenimenti numismatici (Gioia 1883: *a S. Gada trovaronsi moltissime monete di Lao, e tuttodi se ne trovano*). Gli esemplari rinvenuti circa alla metà dell'800, in gran numero raccolti da G. Cappelli, noto collezionista della zona, erano finiti nella sua collezione, confluita in parte nel Museo Nazionale di Reggio Calabria, che

annoverava varie altre monete da diverse altre zecche magno-greche (Poseidonia, Hyele, Heraklea, Sybaris, Metapontion, Terina, Lokroi, Kroton e Rhegion).

Altre menzioni di monete provengono dalle cronache di scavo di Grimaldi e Koller.

Cons.: Laino Borgo, Comune.

Avellino

(SF) Ariano Irpino, dal territorio, vari ritrovamenti, n.s. (dep.: n.s.)

Vari ritrovamenti sporadici, per un totale di c. 370 esemplari. Di queste, circa la metà risalgono al periodo romano imperiale, circa 50 all'età moderna, le restanti al periodo medievale.

Notate:

- 2 follis ribattuti;
- 1 o 2 follis di Romano I (920-944) e Costantino VII, zecca di Costantinopoli;
- 3 aspron trachy di rame bizantini, concavi, probabilmente di Alessio III;
- 15 follari normanni;
- 1 tarì d'oro di Ruggero II (rinvenuto all'interno di un vaso di terracotta);
- 24 denari svevi;
- 7 denari angioini;
- 4 denari tornesi;
- 3 denari enriciani, zecca di Lucca;
- 2 denari "piccoli", zecca di Verona;
- 1 denaro, zecca di Ancona;

- 1 obolo, zecca di Tebe (ducato di Atene) di Guglielmo I de la Roche (1280-1287);
- 1 quartaro di Genova del III tipo (1139-1339);
- 1 obolo della zecca di Venezia o Verona;
- 43 denari aragonesi [5 di Federico III (1296-1337) della zecca di Messina; 2 di Ludovico (1342-1355) della zecca di Messina; 11 di Federico IV "il semplice" (1355-1377) della zecca di Palermo; 2 di Maria e Martino (1392-1402) della zecca di Messina; 1 di Alfonso (1416-1458) della zecca di Messina; 3 di Giovanni (1458-1479) della zecca di Messina; 15 denari aragonesi non meglio classificabili perché molto consunti (tra cui un denaro con al rovescio l'aquila volta a sinistra invece che a destra); 2 denari di Alfonso I (1442-1458) o Ferdinando (1458-494) della zecca di Napoli; 1 mezzo carlino o "giustino" (1459-1460) di Ferdinando d'Aragona; 12 monete, un cavallo, di Ferdinando d'Aragona (1458-1494) – quasi tutte in pessimo stato di conservazione – 1 mezzo tarì d'argento tosato della zecca di Messina di Ferdinando II il Cattolico (1479-1516)].

Materiali indicati in ZECCHINO 2011-12 come provenienti dal territorio, ma MAMMATO 2019, p. 150, non esclude che una parte possano essere in realtà semplici acquisizioni del Museo non da ritrovamento.

Il denaro di Ancona è probabilmente da ricondurre ai ritrovamenti di zona Camporeale/Starza (v. ritrovamento n. 10357).

Cons.: Ariano Irpino, Museo della Civiltà Normanna di Ariano Irpino.

Bibl.: ZECCHINO 2011-12; GIANAZZA, FERRO 2019, nota 52 a p. 297 (cita per la presenza di quartari); MAMMATO 2019 (cita 2 *folles* di Romano I).

(H) Montella, marzo 1954 (*dep.*: c. 1355 (c. 1354 per TRAVAINI, BROGGINI 2016; post 1354 per DE BENETTI 2019a e 2024))

Nel corso di lavori all'interno di un giardino, ripostiglio di soli AV (212 per MEC 14; 209 per STAHL 2000; per ZAORAL 2017 rinvenuti 212 esemplari ma solo 210 consegnati alle autorità).

Notati: 94 fiorini di Firenze, di cui uno a metà (prima metà del XIII secolo); 55 imitazioni di fiorini (di Luigi d'Ungheria, Alberto d'Asburgo, Avignone, Luigi I di Fiandra, Dauphiné, Boemia, Polonia, Borgogna, Orange); 61 ducati di Venezia (2 di Pietro Gradenigo (1289-1311); 4 di Giovanni Soranzo (1312-1328); 16 di Francesco Dandolo (1329-1339); 8 di Bartolomeo Gradenigo (1339-1342); 31 di Andrea Dandolo (1343-1354)).

Il ripostiglio è stato oggetto di un nuovo riesame in TRAVAINI, BROGGINI 2016. Sulla base di questa riedizione risulta che il tesoro è composto da 210 AV:

- monete di area italiana (151 es.)

- Firenze, 89 fiorini dal 1252 al 2° semestre 1347, ma per DE BENETTI (2019a, p. 302), solo 85 della zecca di Firenze, gli altri 4 imitazioni che propongono la stessa legenda *FLORENTIA* dell'originale;
- Venezia, 61 ducati (2 Pietro Gradenigo, 1289-1311; 4 Giovanni Soranzo, 1312-28; 15 Francesco Dandolo, 1329-39; 8 Bartolomeo Gradenigo, 1339-42, 31 Andrea Dandolo, 1343-54);
- 1 fiorino falso;
- 1 ducato falso a nome di Francesco Dandolo.

- imitazioni del fiorino da zecche straniere (59 es.)

- Austria, 3 fiorini di Alberto II il Saggio (1330-58);
- Boemia, 4 fiorini di Giovanni il Cieco (1310-46), zecca di Praga;
- Borgogna, 1 fiorino di Eudes IV (1315-50);
- Cambrai, 3 fiorini del vescovo Pierre d'André (1349-68);
- Delfinato (Viennois), 7 fiorini (1 Guigues VIII, 1319-33; 5 Umberto II de la Tour, 1333-49; 1 Carlo V di Valois, 1349-64);
- Fiandra, 1 fiorino di Luigi I di Nevers (1322-46);
- Hainaut, 1 fiorino di Margherita II d'Avesnes (1345-56);
- Liegnitz-Brieg, 1 fiorino di Venceslao I (1342-64);
- Lussemburgo, 2 fiorini di Giovanni il Cieco di Boemia (1310-46);
- Mainz/Magonza, 1 fiorino di Conone von Falkenstein (1346-53);
- Orange, 2 fiorini di Raimondo IV (1340-93);
- Schweidnitz, 1 fiorino di Bolco II (1326-68);
- Ungheria, 31 fiorini (5 Carlo Roberto d'Angiò, 1309-42; 26 Luigi d'Angiò, 1342-82);
- Comtat Venaissin, 1 fiorino di Giovanni XXII (1316-34).

La data di occultamento si fissa intorno al 1354, per la presenza di un fiorino di Carlo V di Valois Delfinato (1353-54, ante giugno 1354), 2 fiorini d'Orange (1350-54), 1 fiorino di Bolco di Schweidnitz (c. 1345-51). Tutti i fiorini di Ungheria sono anteriori al 1353.

De Benetti (2019a, pp. 454-455) riconosce i fiorini con legenda *FLORENTIA*:

- zecca di Firenze, periodo dei maestri di zecca sconosciuti (1252-1303)

- 1252-ca. 1267 (un punto): 1 es.
- ca. 1285-1290 (rastrello): 1 es.
- ca. 1291-1299 (corona): 1 es.

- zecca di Firenze, periodo dei maestri di zecca prevalentemente conosciuti (dal 1303/II)

- 1313/I (caldaia): 1 es.
- 1313/II (staffa): 1 es.
- 1318/I (simbolo degli Acciaiuoli: acciarino tra due punti): 1 es.
- 1319/I (colomba con ramo di olivo nel becco): 1 es.
- 1322/I (rosa con due foglie e gambo): 1 es.
- 1324/I (riccio): 2 es.
- 1325/II (leoncino seduto): 2 es.
- 1326/I (sonaglio): 1 es.
- 1326/II (vomere): 1 es.

- 1327/II (candelieri): 2 es.

(SF) Montella, castello, n.s. (*dep.*: n.s.)

Da scavi condotti dal prof. Marcello Rotili:

- 1 follis di Teofilo, zecca di Costantinopoli (829-842);
- 1 follis di Basilio I, zecca di Costantinopoli (867-886);
- 3 follis di Costantino VII (913-959) a nome di Romano I, zecca di Costantinopoli (920-944);
- 1 un follis anonimo classe K dell'XI secolo con il busto frontale del Cristo e la Vergine a mezzo corpo;
- 1 follaro di Roberto il Guiscardo, zecca di Salerno con al rovescio XC·RE/XC·IM[P]ibattuto su follis anonimo (1077-1085) (TRAVAINI 1995, n. 32; *MEC* 14, nn. 75-82);
- 1 follaro di Ruggero II, zecca di Salerno (1127-1130) (TRAVAINI 1995, n. 177; *MEC* 14, nn. 170-171);
- 4 denari di Enrico VI con Costanza d'Altavilla, zecca di Brindisi con AP (SPAHR 1976, n.

- 30; TRAVAINI 1993 n. 6; *MEC* 14, nn. 485-487);
- 1 mezzo denaro di Federico II del 1239, zecca di Brindisi (SPAHR 1976, n. 122; TRAVAINI 1993, n. 31; *MEC* 14, n. 549);
 - 1 mezzo denaro di Federico II del 1243, zecca di Brindisi (SPAHR 1976, n. 129; TRAVAINI 1993, n. 35a; *MEC* 14, n. 558);
 - 1 denaro di Federico II del 1243, zecca di Brindisi (SPAHR 1976, n. 128; TRAVAINI 1993, n. 35; *MEC* 14, n. 555);
 - 1 mezzo denaro di Federico II del 1245, zecca di Brindisi (SPAHR 1976, n. 136; TRAVAINI 1993, n. 40; *MEC* 14, n. 560);
 - 2 denari di Federico II del 1247, zecca di Brindisi o Messina (SPAHR 1976, n. 143; TRAVAINI 1993, n. 44; *MEC* 14, n. 565);
 - 5 denari di Federico II del 1249, zecca di Brindisi (SPAHR 1976, n. 148; TRAVAINI 1993, n. 48; *MEC* 14, n. 570);
 - 1 denaro di Corrado I di Svevia, zecca di Messina (SPAHR 1976, n. 158, TRAVAINI 1993, n. 54, *MEC* 14, n. 577);
 - 1 denaro di Carlo I d'Angiò, zecca di Brindisi (SPAHR 1976, n. 43; TRAVAINI 1993, n. 100; *MEC* 14, n. 647);
 - 1 denaro di Carlo I d'Angiò, zecca di Brindisi (SPAHR 1976, n. 41; TRAVAINI 1993, n. 98; *MEC* 14, n. 644);
 - 1 denaro tornese di Guglielmo I de la Roche (1280-1287), zecca di Tebe (ducato di Atene);
 - 1 denaro gherardino di Carlo II d'Angiò, zecca di Napoli (1285-1309) (*MEC* 14, n. 693);
 - 1 denaro tornese di Isabella di Villehardouin, Chiarenza, principato di Acaia (1297-1301);
 - 2 denari tornesi di Filippo di Savoia, Chiarenza, principato di Acaia (1301-1307);
 - 2 denari tornesi di Chiarenza di incerta attribuzione;
 - 1 denaro di Roberto II d'Angiò, zecca di Napoli (1309-1343) (*MEC* 14, nn. 718-719);
 - 4 denari di Giovanna I d'Angiò, zecca di Napoli (1343-1381);
 - 1 denaro di Ludovico e Giovanna I di Taranto, zecca di Napoli (1343-1347);
 - 2 denari di Carlo III di Durazzo, zecca di Napoli (1382-1386) (*MEC* 14, n. 725);
 - 2 denari di Ladislao di Durazzo, zecca di Napoli (1386-1390) (*MEC* 14, n. 728);
 - 1 denaro di Alfonso I d'Aragona, zecca di Napoli (1442-1458);
 - 1 cavallo di Ferdinando d'Aragona, zecca di Napoli (1458-1494).

Il denaro gherardino di Napoli viene certamente dal castello del Monte di Montella (v. ROTILI 2011).

(H) Benevento, criptoportico romano dei SS. Quaranta, 26 novembre 1984 (dep.: post 1278)

Il 26.11.1984 è stato rinvenuto un tesoretto di monete medievali in oro, durante i lavori di restauro del Criptoportico dei SS. Quaranta di Benevento. Le monete – 20 tarì, suddivisi in oltre

100 spezzoni – erano state inserite in una fessura del muro del monumento, dove sono state reperite in modo del tutto casuale.

Composizione:

- tarì, Ruggero II d'Altavilla (1140-54), zecca di Palermo;
- tarì, Guglielmo II d'Altavilla (1166-89), zecca incerta;
- tarì, Tancredi d'Altavilla (1189-94), zecca di Messina o Palermo;
- 2 tarì, Federico II di Svevia come re di Sicilia (1197-1209), zecca di Messina o Brindisi;
- tarì, Federico II di Svevia come re di Sicilia (1197-1209), zecca di Palermo;
- 3 tarì, Federico II di Svevia, senza titolo (1197-1220), zecca di Messina o Palermo;
- 3 tarì, Federico II di Svevia come imperatore (1220-50), zecca di Messina o Brindisi;
- 7 tarì, Federico II di Svevia, senza titolo, 1231-50, zecche incerte (Brindisi? Messina?);
- tarì, Carlo I d'Angiò (1266-82), 1278, zecca di Messina, Brindisi o Barletta.

Nature of the site at the time of concealment or loss: urban settlement (oppidum, colony, town)

(H) Alife/Allifae, loc. Torrione, 1997 (dep.: post 1180 (1189-95 c. per BALDASSARRI 2021))

Da scavo stratigrafico, ripostiglio di 635 monete, battute in zecche italiane e francesi, 4 delle quali in AV (tari amalfitani di Ruggero II) e tutte le altre AR+MI, rinvenuto nel 1997 da F. Miele nel sito chiamato Torrione, ad Alife, nell'area settentrionale della Campania in Italia, vicino ad una tomba romana monumentale (fine del I sec. a.C. o inizio del I sec. a.C.) in una necropoli rimasta in uso dal I al VII sec. Il tesoretto venne ritrovato con una croce d'argento in un sacchetto di canapa interrato in un vaso di ceramica.

Le monete sono principalmente denari, con larga presenza di oboli. Notati 399 denari di Champagne di Thibaut II, 10 denari e 12 oboli di Henri I con oYo.

Zecche rappresentate: Susa (Amedeo III di Savoia), Pavia (Ottone I di Sassonia, Ottone II di Sassonia, emissioni dell'epoca di Enrico III ed Enrico IV di Franconia), Verona (periodo di Lotario III di Supplimburgo), Lucca (Enrico IV ed Enrico V di Franconia), Amalfi (Ruggero II d'Altavilla), Palermo (Ruggero II d'Altavilla, Guglielmo II d'Altavilla), Provins (Thibaud I, Thibaud II, Enrico II), Troyes (Thibaut II, Enrico I), Meaux (Burcard vescovo di Meaux), Sancerre (Étienne, emissioni anonime dell'epoca di Étienne), Gien (Geoffroy di Dozny), Chartres (conti di Chartres), Châteaudun (visconti di Châteaudun), Orléans (Luigi VI o Luigi VIII), Rennes (Conan III di Bretagna), Angers (Geoffroy II o Geoffroy III il Barbuto, Folco V), Souvigny (abbazia cluniacense di Souvigny), Angoulême (conti di Angoulême), zecca ignota dei conti di Poitou/Melle, Vienne (arcivescovi di Vienne), Valence/Valenza (vescovi di Valence), Melgueil (conti di Melgueil), Le Puy (vescovi di Le Puy).

Nell' specifico, per la zecca di Lucca: 2 denari per Enrico IV, tipo Matzke H2a (1056-1105/06); 3 denari per Enrico IV/ V, tipo Matzke H3b (1056-1106/1106-1125), 21 denari per Enrico IV/ V, tipo Matzke H3b/4a (1100 -1130), 11 denari per Enrico V, tipo Matzke H4a (1106-1125), 5 mezzaglie (mezzi denari) per Enrico IV/ V (1056-1106/1106-1125), 1 mezzaglia (mezzo denaro) per Enrico V (1106-1125).

(H) Sessa Aurunca, dal territorio (?), 1916 (dep.: VI sec.)

Ripostiglio in fittile con moneta ostrogota, bizantina, vandala.

Nel 1916 fu sequestrato un “tesoretto” rinvenuto, a detta dello scopritore, nell'agro di Sessa Aurunca. In considerazione delle incerte circostanze del recupero Alda Levi, incaricata di valutare il gruzzolo, nel dare notizia del ritrovamento di 2 monete d'oro e *moltissime monetine di bronzo* si esprime con cautela in merito all'integrità dell'insieme. Di questo descrisse in maniera essenziale 300 monete, mentre, scrive, *duemila circa di esse non si possono descrivere per il loro stato di corrosione e carbonatazione, pur appartenendo certamente agli stessi tipi e alla stessa epoca delle altre*.

Il tesoretto consta di 2 monete d'oro e 1.917 minimi (per un ammontare di circa 1.400 grammi di bronzo), tutti – ad eccezione di quelli sottoposti a pulitura e disposti nei cassetti del Medagliere – accumulati da incrostazioni terrose e da una patina di conservazione omogenea. Questo dovrebbe assicurare in merito alla unitaria composizione dell'insieme, non costituito, dunque, dall'assemblaggio di più gruzzoli fra loro simili, anche se ne resta incerta l'integrità. Dubbi possono nascere, eventualmente, in relazione alla natura mista del tesoro, data la rarità di questa tipologia di nuclei.

Le due monete d'oro sono un solido e un tremisse conati nella zecca di Roma da Atalarico a nome di Giustiniano I, databili agli anni 527 – c. 530.

Del tesoretto sono state schedate 501 monete di bronzo, poco più di un quarto del totale. Allo stato attuale di avanzamento dello studio del ripostiglio, le monete più antiche individuate sono entrambe emissioni riconducibili alla città di Paestum. La più antica è un *semis* della zecca pestana, emesso attorno alla metà/terzo quarto del I secolo a.C. dai duoviri *L. Marcius* e *N. Gavius*, raffigurante, al rovescio, la dea *Bona Mens*.

Notate:

- Moneta ostrogota: *solidus* AV Giustiniano I/Atalarico/Roma (ARSLAN 1989, AV 26); *tremissis* AV Giustiniano I/Atalarico/Roma (ARSLAN 1989, AV 29); undici *3 nummi* AE Atalarico/Monogramma (ARSLAN 1989, AE 20); sei *3 nummi* AE Theodahat/Monogramma (ARSLAN 1989, AE 21); *3 nummi* AE con monogramma di “Errarico” (Teodorico); 93 *3 nummi* AE Baduela/Monogramma (ARSLAN 1989, AE 23); 130 *3 nummi* AE Baduela/*dn-rex-b* (ARSLAN 1989, AE 24); c. 2.000 monete AE illeggibili.
- Moneta vandala: *minimus* AE Hilderich/N-iiii in cordoncino perlinato.
- Moneta bizantina: 56 *minimus* AE: tre AE Giustiniano I/*VOT XIII* (SABATIER 137); 19 AE Giustiniano I/monogramma Giustiniano in ghirlanda (SABATIER 139); quattro AE Giustiniano I/“rosa a otto foglie in ghirlanda (SABATIER 141); un AE Giustiniano/Croce latina in cordoncino perlinato (SABATIER 145); sette AE Giustiniano I/Croce in ghirlanda (SABATIER 146); 21 AE Giustiniano I/Leone a d. in ghirlanda; (SABATIER 148); 13 AE Giustiniano I/Croce tra Alfa e Omega (SABATIER 149).

Monete ostrogote controllate autopicamente da E. Arslan.

Cons.: Napoli, Medagliere del Museo Archeologico.

(H) Cuma, primi di giugno 1868 (dep.: fine I sec. d.C. (?))

Nei primi giorni di giugno del 1868 un contadino di Pozzuoli, coltivando una sua proprietà campestre situata nel territorio dell'antica Cuma, a non grande profondità, resistente lo strumento rurale che adoperava, scoprì un salvadanaio in terracotta, che andò in pezzi. All'interno, circa 1.000 AV di età romano-imperiale del periodo da Augusto a Domiziano, tutti in conservazione perfetta tranne quelli di Augusto e Tiberio, che apparivano più consunti.

L'imperatore rappresentato col maggior numero di monete risulta essere Nerone, quindi Tito e Domiziano.

Cons.: Realisticamente disperso. In RICCIO 1868, p. 75 l'autore del testo dichiara di avere acquistati *moltissimi* degli esemplari rinvenuti.

Bibl.: RICCIO 1868.

(SF) Napoli, catacombe San Gennaro, scavi 1971-74 e 1976-94 (dep.: secc. III-XVI)

Nei depositi del complesso ianuario di Capodimonte si conservano numerosi manufatti pertinenti all'arredo personale dei defunti, al corredo funebre o all'allestimento dei sepolcri. Provenienti dalle tombe indagate alla fine del secolo scorso, sono rimasti sinora in gran parte inediti e solo di recente la Pontificia Commissione di Archeologia Sacra, in previsione dell'edizione delle vecchie ricerche archeologiche, ne ha avviato la classificazione, sulla base del Sistema di Catalogazione Reperti di Archeologia Sacra (SICRAS). La catalogazione dei reperti numismatici ha portato all'individuazione di 1317 esemplari, provenienti perlopiù dagli scavi condotti da padre Umberto M. Fasola tra il 1971 e il 1974 e dai sacerdoti Raffaele Calvino e Nicola Ciavolino tra il 1976 e il 1994.

- moneta romana

- segnalati 29 es. databili al III-IV sec. d.C. (catalogo in EBANISTA, SANTORO 2020).

- moneta vandalica

- L'unica moneta attribuibile a una zecca vandalica è un nummo che presenta al D/ un busto rivolto a destra, mentre, al R/ un palmizio con frutti al centro del campo. Ristudiando la datazione proposta agli inizi del Novecento da Warwick William Wroth, Michele Asolati ha ristretto la cronologia di emissione di questo tipo agli anni 530-534, attribuendola a Gelimero e alla zecca di Cartagine, poco prima della riconquista bizantina del Nordafrica da parte di Giustiniano.

- moneta gota

- 3 decanummi e 24 nummi. I decanummi, conati nella zecca di Roma, recano al D/ il busto di Baduela raffigurato frontalmente e la leggenda DNBADV IL AREX; al R/ il campo è, invece, occupato dalla leggenda DNB/ADV/ELA/REX. Per quanto riguarda i nummi, sono attestati due tipi di Baduela, conati nella zecca di Pavia nello stesso periodo in cui furono battuti i già citati decanummi, nonché un tipo di nummus battuto da Atalarico. Il primo tipo di Baduela è individuato da 13 nummi che al D/ presentano una leggenda indecifrabile e un busto rivolto a destra; al R/ risultano riconoscibili al centro del campo le lettere che costituiscono la leggenda DNRE/B. Il secondo tipo di nummo di Baduela, presente in quattro esemplari, reca una leggenda incomprensibile al D/, mentre al R/ è presente il monogramma del re con una piccola croce soprastante. Altri 7 nummi conati fra il 526/527 e il 534 nella zecca di Roma mostrano al R/ il monogramma di Atalarico; in un solo caso al D/ si scorgono tracce della leggenda a nome di Giustiniano: [IVSTI]NIANI. Per una moneta l'accostamento ad Atalarico è più incerto per una scarsa leggibilità sia del D/ che del monogramma posto al R/.

- moneta bizantina

- 1 esemplare da XIII nummi, 35 decanummi, 68 pentanummi e 1 nummo. Ben 18 dei 35 decanummi appartengono a Giustiniano e 11 sono di incerta classificazione. Fra i decanummi di Giustiniano, battuti fra il 527 e il 565, il tipo più attestato (11 esemplari) è

di zecca siciliana, verosimilmente Catania; presenta al D/busto diademato rivolto a destra e, al R/, X al centro del campo. Attribuibili a Giustiniano e all'atelier siciliano anche tre esemplari che, oltre alla X al R/, presentano il busto di fronte. Una variante di quest'ultimo tipo reca anche la X fra due astri al R/ e mantiene il busto di fronte al D/. La rassegna di decanummi attribuibili con certezza a Giustiniano è testimoniata anche da due tondelli, conati nella zecca di Salona, con la I al R/ e con il busto rivolto a destra al D/. L'impossibilità di decifrare la leggenda impedisce la sicura attribuzione a Giustiniano di due esemplari che presentano la I fra astri al R/. A Tiberio II e agli anni 579-582 va ricondotto con sicurezza un solo decanummo dell'officina monetaria di Ravenna: la moneta reca al D/ tracce della leggenda e nel campo del R/ una I accantonata da due crocette. Tra gli anni 582-602, all'epoca di Maurizio, vennero conati cinque decanummi pertinenti allo stesso tipo, probabilmente siciliano, e caratterizzata da una I con tratto soprastante e sottostante nel campo del R/ e un busto diademato rivolto a destra al D/. Per i pentanummi si nota una netta predominanza degli esemplari conati sotto Giustiniano, rispetto a quelli di Giustino II. Al primo vanno attribuiti 31 esemplari verosimilmente in Sicilia fra il 527 e il 565; al D/ hanno la leggenda DNIVSTINI ANVSPPAVC, mentre al centro del campo del R/ recano la V. Altri tre pentanummi giustiniani appartengono al tipo costantinopolitano che presenta la E affiancata da croce sulla destra. I pentanummi attribuibili a Giustino II sono 18. Altri 15 pentanummi risultano di incerta attribuzione, ma dovrebbero appartenere a uno dei due imperatori.

- moneta di età moderna

- segnalata una non meglio precisata moneta riferibile a Giovanna La Pazza e Carlo V d'Asburgo (EBANISTA, SANTORO 2020, p. 167).

Bibl.: [ARTHUR 2002], p. 137 (solo l'AE Tiberio II.; ARSLAN 2004i, n. 1280 (segnala solo AE di Tiberio II); EBANISTA, SANTORO 2019 (catalogo dei materiali già riconosciuti); EBANISTA, SANTORO 2020 (per i 29 esemplari romani di III-IV sec. d.C., citando anche la moneta di età moderna a nome di Giovanna la Pazza e Carlo V d'Asburgo).

(P) Pompei, regio VIII, insula 5.36, n.s. (dep.: early 1st cent. BC)

A purse from the Republican Bathhouse at Regio VIII 5.36 in Pompeii, with 90 coins in it, is a revealing sample of the circulating medium of Pompeii in early 1st c. BC, when the flourishing market economies of central Italy had to make do with ad hoc solutions to the need for small change, which the supply of Roman coin did not meet. It contains Greek, Punic Ebusan and Roman coins, but the majority are coins of the Pompeian pseudo-mint. The Ebusan coins were probably imported as a block in the second half of the 2nd c., and then imitated by the pseudo-mint, which also imitated Massalia, a main partner in the wine trade. Of particular interest is the number of imitations of Rome, including anonymous quadrantes of the style of the moneyers' coins of the late second c., at least some of which are probably from Minturnae.

(SF) Salerno, area archeologica di San Pietro a Corte, n.s. (dep.: n.s.)

Da scavi nell'area archeologica di San Pietro a Corte, varie monete. Segnalate:

- 1 *folles* anonimo bizantino di classe J (1080-1085);
- 2 follari attribuiti a Roberto il Guiscardo, ribattuti come quasi tutti i tondelli di questa autorità;
- 2 denari imperiali d'argento della zecca di Lucca: uno attribuito a Corrado II di Franconia (1026-1039), l'altro allo stesso imperatore o al suo predecessore Enrico, datato tra il 1004 e il 1039.
- 1 follaro forse attribuibile a Guglielmo duca (1111-1127), zecca di Salerno;
- 4 follari di Ruggero II (2 datati 1127-1130 e 2 al periodo reale 1140-1154);
- 5 follari attribuiti a Guglielmo I (1154?-1166);
- 2 follari datati al XII secolo di incerta attribuzione (uno dei due è probabilmente un'emissione di Ruggero II o Guglielmo I);
- 2 denari MI datati tra il XII e il XIII secolo: uno a nome di Raimondo I di Narbona della zecca francese di Melgueil, l'altro emissione anonima degli arcivescovi di Ravenna (della zecca cittadina), datato tra il 1194 e i primi decenni del XIII secolo;
- 1 denaro MI attribuito a Corrado I della zecca di Brindisi (1250-1254);

- 4 denari MI di Manfredi: 3 della zecca di Brindisi e 1 della stessa zecca o di Manfredonia (1258-1263).
- 3 denari di Carlo I d'Angiò (1266-1278): 2 di Brindisi e 1 di Brindisi o Messina);
- 5 denari di Carlo II d'Angiò (2 denari regali della zecca di Napoli datati 1290-1292 e 3 denari gherardini della stessa zecca, 1299-1309);
- 1 ulteriore denaro gherardino di Napoli, di incerta attribuzione (Carlo II o Roberto d'Angiò);
- 1 denaro di Ladislao di Durazzo (1386-1390/1399-1414), zecca di Napoli;
- 2 denari tornesi della Grecia franca: 1 denaro di Guglielmo di Villehardouin (1246-1278, Principato d'Acaia, zecca di Corinto?) e un tondello di autorità incerta sempre dal Principato d'Acaia (XIII-XIV secc.).

Nature of the site at the time of concealment or loss: *castle / fortress*

(SF) Salerno, castello di Arechi, scavi 1960-70 (*dep.:* n.s.)

Dagli scavi all'interno del castello: 1 follaro di Gisulfo II (tipo TRAVAINI 1995 n. 13); 1 follaro del duca Guglielmo (tipo TRAVAINI 1995 n. 120); 1 follaro di Tancredi (tipo TRAVAINI 1995 n. 402); 1 denaro di Melgueil, XII-XIII secolo; 1 denaro di Corrado I di Svevia (tipo TRAVAINI 1993 n. 49); 1 denaro di Corradino (tipo TRAVAINI 1993 n. 55); 1 denaro tornese della Grecia Franca; 1 denaro tornese di Roberto d'Anjou, zecca di Napoli; 2 denari di Giovanni II d'Aragona (scudo tra I – I), zecca di Messina; 3 cavalli di Ferrante d'Aragona, zecca de L'Aquila; 1 cavallo di Luigi XII di Francia, zecca di Napoli; 3 grani di Giovanna e Carlo V (1516-19), zecca di Napoli.

MAMMATO 2019 (p. 146) cita due denari di Lucca per Corrado II (1027-1039). Per l'età angioina (p. 154) parla inoltre di 3 denari brindisini di Carlo I d'Angiò (1266-1278), 2 denari napoletani di Roberto d'Angiò (1309-1343), 1 denaro di Giovanna I (1343-1347, di Napoli), 2 denari di Giovanna I e Ludovico di Taranto (1352-1362, di Napoli), 1 denaro di Ladislao di Durazzo (1386-1390/1399-1414, di Napoli), 10 denari dal Principato d'Acaia e dal Ducato di Atene, non meglio identificati (XIII-XIV sec.).

Sempre dal castello di Salerno, ma non da contesto stratigrafico: 1 denaro napoletano di Roberto d'Angiò (1309-1343) e 1 denaro dal Principato d'Acaia.

Bologna

(SF) Bologna, basilica di san Petronio, sagrato, scavi 1985 (dep.: 1191 c. – 1406 c.)

Uno scavo condotto nel 1985 sul sagrato della basilica di san Petronio a Bologna sotto la direzione della Soprintendenza Archeologica dell'Emilia-Romagna, ha portato alla luce le fasi di vita di una parte della città rivoluzionata a partire dal XIII secolo con lo sventramento di un quartiere urbano per far posto a edifici pubblici, alla piazza, a edifici pubblici e, dal 1390, alla basilica. Tra i materiali rinvenuti, 34 monete e 2 medaglie.

Composizione:

- zecca di Ancona
 - 2 denari MI, emissioni autonome databili al 1320-30;
- zecca di Bologna
 - 2 denari (bolognini piccoli) MI, emissioni del Comune di Bologna a nome di Enrico VI (1191-1334);
 - 1 denaro MI, emissione del 1191-1406?;
 - 3 denari (bolognini piccoli) MI, emissioni del Comune di Bologna a nome di Enrico VI (probabilmente 1306);
 - 1 denaro (picciolo) MI, papa Gregorio XI (1370-78?);
 - 6 denari (piccioli) MI, papa Gregorio XI (1374);
 - 3 denari (piccioli) MI, emissioni autonome (c. 1380-1400);
 - 2 denari (piccioli) MI, emissioni autonome (1398-1404);
 - 1 grosso (bolognino grosso) AR, emissione del Comune di Bologna a nome di Enrico VI (1236 – c. 1260);
 - 1 grosso (bolognino grosso) AR, emissione autonoma (c. 1410-20);
- zecca di Como
 - 1 denaro MI, Azzone Visconti signore di Como (1335-39);
- zecca di Parma
 - 1 denaro mezzano (torellino) MI, emissioni autonome (1318-19?);
 - 1 denaro mezzano (torellino) MI, Simone, Guido e Azzo da Correggio (1341-44?);
- zecca di Ravenna
 - 1 denaro MI, emissioni vescovili anonime (XIII-XIV sec.)
- zecca di Siena
 - 1 quattrino MI, Repubblica di Siena (1351-90)
- zecca di Venezia (?)
 - 1 contraffazione AE del grosso matapan di Venezia
- illeggibili, 6 es.

Lo scavo è stato pubblicato in brevi relazioni negli anni '80, ma il materiale numismatico non è stato nelle pubblicazioni.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(oth) Bologna, chiesa di san Procolo, tomba di san Procolo, ricongnizione 1943 (dep.: c. 1389-1437)

Rinvenimento di 36 monete a seguito dell'ispezione dall'arca di san Procolo, situata nell'omonima chiesa di Bologna, avvenuta nel 1943. In quest'ultima occasione vi furono rinvenute 36 monete emesse dalle zecche di Bologna (24 es.), Ancona (5 es.), Ferrara (2 es.), Firenze (2 es.), Siena (2 es.) e Aquileia (1 es.).

Le monete furono deposte tra il 1389 (quando il sarcofago fu aperto e i resti del santo protetti da una semplice grata di ferro esposti ai fedeli) e il 1437 (allorché fu richiusa definitivamente sino alla seguente ispezione del 1943).

(SF) Comacchio, piazza XX Settembre, area della cattedrale, 2008 (dep.: post 816/9)

Dalle stratigrafie indagate provengono 26 reperti numismatici, tra monete in mistura, lega di

rame o cupro-nickel e piccole bulle plumbee. Non sono stati puliti e consolidati 22, solo 19 dei quali sono risultati leggibili e classificabili (17 monete e 2 piombi), mentre per gli altri 3 è possibile proporre soltanto un'attribuzione cronologica generica.

Materiali identificati (in ordine cronologico di emissione):

- Ravenna, Costante II imperatore, 644-645, *folles* o 40 nummi;
- Ravenna, Maurizio Tiberio imperatore, 582/6-602, decanummo;
- Venezia, Ludovico il Pio imperatore, 816/8-822/3, denaro con legenda VEN | ECIAS su due righe;
- Venezia, Ugo di Arles re d'Italia, 926-931/45, denaro;
- Bologna, Comune a nome di Enrico VI imperatore, 1191-1236, denaro minuto;
- Mantova, Francesco I Gonzaga duca, 1383-1407, bolognino;
- Bologna, anonima pontificia, 1422-1424, quattrino;
- Ferrara, Borso d'Este duca, 1471, duca;
- zecca e autorità non determinate, *bullae* o sigillo pendente, fine XV-XVII secolo;
- zecca e autorità non determinate, *bullae* o sigillo pendente, fine XV-XVII secolo;
- Venezia, anonima dogale, massaro non determinabile, secondo quarto del XVI secolo, bagattino;
- Ferrara, Alfonso I d'Este duca, 1505-1534, quattrino;
- Ferrara, Alfonso I d'Este duca, 1505-1534, quattrino;
- Ferrara, Ercole II d'Este duca, 1534-1559, sesino;
- Ferrara, Ercole II d'Este duca, 1534-1559, sesino;
- Bologna, Gregorio XIV e Sede pontificia vacante seg., 1591-1592, quattrino (ribattuto);
- Roma, Vittorio Emanuele III di Savoia re d'Italia, 5 centesimi 1919;
- Parigi (Pessac), Repubblica Francese (Vème République), 10 franchi 1984;
- Belgrado, Repubblica Socialista Federale Jugoslava, 5 para 1996.

Bibl.: GELICHI 2009, p. 19 (foto del denaro di Ludovico il Pio); COUPLAND 2010, pp. 311-312 (cita il denaro di Ludovico il Pio); BALDASSARRI 2021b (edizione completa di tutte le monete rinvenute).

Discovery of the find: discovery during archaeological investigations

(SF) Comacchio, pieve di Santa Maria in Padovetere, necropoli, scavi 1960-62 (dep.: IV-VII secc.)

Dagli scavi condotti nel 1960-62 presso santa Maria in Padovetere a Comacchio provengono 42 AE appartenenti a più fasi di frequentazione distinte cronologicamente: IV, VI e VII secolo.

Si tratta per il 69% di monete tardoromane (AE3 e AE4), per il 31% da monete bizantine, in larga parte in pessimo stato di conservazione, al punto che solamente il 33% di esse resta leggibile (esclusivamente materiale bizantino e un AE3 della seconda metà del IV sec. d.C.).

Esistono anche monete di cui non si identificano dati precisi, in quanto testimoniano una fase archeologica precedente la chiesa.

Segnalate:

- moneta romana

- AE3, Valentiniano (364-376), zecca orientale (*RIC* 9, tav. XI nn. 6-8);
- altre monete AE illeggibili, tra cui tre presso tomba 13 e una presso tomba 98;

- moneta bizantina

- *XX nummi* AE Giustiniano I, zecca orientale incerta: Costantinopoli, Nicomedia o Salona (527-565);
- *5 nummi* AE Giustiniano I, zecca di Roma (538-544);
- *XX nummi* AE Tiberio II, zecca di Roma (578-582);
- *XX nummi* AE illeggibile, zecca orientale (VI sec.);
- *2 follis* AE Giustiniano II (ma forse Eraclio ?), zecca di Cartagine (610-611);
- *folles* AE Eraclio, zecca di Cartagine (ma forse Costantinopoli?) (610-641), proveniente da tomba 80 (scavi 1960);

- 5 nummi Maurizio Tiberio o Eraclio, zecca di /Costantinopoli (518-610 o 610-641);
 - moneta illeggibile, forse Eraclio;
 - 3 nummi Eraclio, zecca orientale, forse Alessandria (618-645);
 - follis AE Costantino IV, zecca di Sicilia (668-717, ma forse 668-685);
 - 5 nummi, zecca orientale (VI-VII sec.);
 - frazione di follis, forse ritagliato, zecca orientale (VII sec.);
 - nummus AE, autorità e zecca incerte;
- in tomba 80, "monetina bronzea" forata.

Cons.: Ferrara, Museo Archeologico Nazionale.

Bibl.: PATITUCCI 1970, p. 85; [RIEMER 2000], p. 348 (monetina forata da tomba 80); BUCCI 2007 (non parla però di monete forate).

(SF) **Cesenatico, area archeologica di Ad Novas**, scavi 2006-11 (*dep.:* I-V sec. d.C.)

Gli scavi effettuati tra il 2006 e il 2011 presso il sito hanno portato alla luce circa 400 monete, provenienti sia dalle stratigrafie di scavo, sia da rinvenimenti fortuiti e ricognizione nelle zone appena adiacenti. Tutti i rinvenimenti sono riferibili a emissioni in lega di rame e al momento non è stata individuata la presenza di esemplari in argento. Il lavoro di pulizia, conservazione e catalogazione dei reperti monetali si è concentrato sul materiale proveniente dalle stratigrafie di scavo, 223 reperti, databili tra il I secolo a.C. fino alla seconda metà del V secolo d.C. Da sottolineare l'assenza di monetazione del periodo ostrogoto e bizantino, seppur attestati abbondantemente nell'area circostante, in particolar modo a Classe. Molti reperti (68 es.) di questo nucleo monetale sono illeggibili, ma possono essere identificati come produzioni di IV-V secolo.

- *Reperti fino al III secolo d.C.* Da una prima analisi diacronica dei reperti monetali rinvenuti, si evidenziano attestazioni costanti tra il I secolo a.C., con emissioni imperiali di Augusto, fino al III secolo d.C. La monetazione di questo periodo è presente principalmente nelle trincee 20 e 21; in particolare, alcuni esemplari dalla T21 provengono dallo strato relativo alla

strada romana. Si registra invece l'assenza di monetazione della seconda parte del III secolo, in particolare di radiati di Gallieno e Probo, con dati che contrastano, per esempio, l'evidenza monetale di Classe, ove il materiale della seconda metà del III secolo è più abbondante.

- *IV secolo*. Il quadro cambia a partire dal IV secolo, con l'abbondante presenza di produzioni della dinastia costantiniana, in particolar modo con emissioni iniziali del regno di Costantino e dei suoi successori. In particolare, sono stati rinvenuti diciassette esemplari (il 7,6% del totale) riconoscibili nelle emissioni di AE3 *Fel Temp Reparatio*, con *Falling Horseman*, una tipologia frequente nel territorio circostante, ma abbondante anche in molte parti dell'impero. Questi dati preliminari registrano una presenza scarsa delle produzioni della dinastia valentiniana, con solo quattro esemplari del tipo AE3 *Gloria Romanorum* e uno del *Securitas Rei Publicae*, mentre si registra una scarsa presenza di produzioni databili al 383-388 d.C., un momento storico contrassegnato dalla presa di potere degli usurpatori Magno Massimo e Flavio Vittore. I rinvenimenti di questo periodo rispecchiano i dati provenienti da zone limitrofe, in particolare a Classe e nel Cervese.
- *V secolo*. Le attestazioni di V secolo non includono, al momento, produzioni di Teodosio I, mentre si contano ben sette esemplari di AE4 di Onorio, del tipo *Gloria Romanorum* con imperatore che schiaccia due nemici e almeno undici esemplari, che possono essere attribuiti a Valentiniano III, degli AE4 *Victoria Avgv* di modulo piuttosto basso. Il primo tipo viene rinvenuto comunemente nel ravennate e in particolare nell'area nord-orientale della Pianura Padana, da Ravenna fino all'Istria, alla Dalmazia e alla Slovenia. L'area di distribuzione delle emissioni in lega di rame di Valentiniano III è invece delimitata alla zona di Ravenna-Classe, oltre a Villa Clelia e Rimini con solo tre esemplari in totale.

L'area archeologica di *Ad Novas*, rinvenuta già nel 1969, si colloca a ovest della moderna città di Cesenatico, ca. 30 Km a Sud di Ravenna. Le indagini archeologiche iniziate nel 2006 hanno portato alla luce varie fasi di insediamento, la più antica attribuibile al I secolo a.C., con fasi successive che vedono la costruzione di una strada glareata, una mansio/statio, lo scavo del canale Fossatone (databile al I-II sec. d.C.) e il possibile sviluppo di un mercato nel III secolo d.C. Appartiene invece alla fine del IV-V secolo una fase di ristrutturazione degli edifici scoperti lungo la strada glareata, che vengono poi intenzionalmente demoliti agli inizi del V secolo per fare posto a un insediamento costituito di capanne. I materiali vitrei e ceramici sembrano estendere la vita di questo centro fino alla fine del VI secolo, forse anche fino agli inizi del VII anche se il dato non è coadiuvato da attestazioni monetali del periodo ostrogoto e bizantino.

(H) Forlì, fraz. Villanova, ottobre 1934 (dep.: prima metà XIV sec. (?))

Ripostiglio, composto da 10 fiorini AV “del Battista”, rinvenuto nell’ottobre del 1934 durante uno scavo in un fondo della parrocchia di Villanova. Si conservano le descrizioni dei segni presenti su cinque esemplari acquisiti come quota parte spettante allo Stato e all’epoca depositati presso il Museo Civico di Forlì: una croce, un girasole, un quadrifoglio, una conchiglia e una foglia di vite. Questi segni potrebbero essere riferibili a emissioni fiorentine dell’ultimo quarto del XIII e della prima metà del XIV secolo. Al momento non è stato possibile verificare la presenza delle monete presso il museo.

(SF) Castelfranco Emilia, via Peschiera, necropoli, 1986 (dep.: I sec. d.C.)

Nel corso della primavera del 1986, in occasione di scavi pertinenti ad attività edilizie private, attuati in via Peschiera a Castelfranco Emilia, è stata rinvenuta una serie di sepolture di epoca romana. L'area indagata si colloca a sud della via Emilia, a circa 250 m dal suo attuale corso, e consiste in un settore rettangolare di 8,00x4,50 m, disposto in senso NW/SE.

Segnalato il ritrovamento di diverse monete, tra cui:

- tomba 15: moneta in bronzo non identificata;
- tomba 16: 1 asse di Tiberio per Augusto divinizzato (34-37 d.C.); 1 asse della medesima tipologia, ma di imitazione.

V. anche ritrovamento n. 10094 (comprende in parte anche questi materiali).

Discovery of the find: fortuitous discovery, construction sites / road works; discovery during Nature of the site at

(H) Castelvetro, fraz. Solignano Nuovo, c. 1890 (dep.: c. 1523-29)

Sulle colline modenesi, in un podere prossimo alla vecchia chiesa parrocchiale, alcuni agricoltori nel dissodare il terreno per collocarvi un nuovo filare di olmi scoprivano alla profondità di 75 centimetri un grosso muro costruito in ciottoli cementati, parte forse delle fondamenta di qualche edificio di età medioevale. Nel demolirlo vi trovarono rinchiuse un piccolo vaso con 78 AR + 1 AV, un anello a cerchietto d'oro arabescato con corniola incastonata sulla quale sono incisi i busti affrontati di Iside e di Serapide, un altro anello a cerchietto d'argento dorato con doppietta simulante uno smeraldo, 25 dischetti d'argento dorato con foro tondo nel mezzo adorni di cinque gigli simulanti corona marchesana.

Composizione:

- Monete francesi e tedesche, giudicate comuni;
- Zecca di Bologna, anonime papali: 4 grossi, 9 carlini; Giulio II (1503-13): 1 giulio con ritratto a destra;
- Zecca di Carmagnola, Michele Antonio di Saluzzo (1504-28): 2 testoni, 1 cavallotto;
- Zecca di Desana, Giovanni Bartolomeo Tizzoni (1529-33): 1 testone;
- Zecca di Ferrara, Alfonso I d'Este (1505-34): 1 testone, 1 pezzo da 5 soldi;
- Zecca di Firenze, Repubblica (1510-26): 5 grossi con stemma;
- Zecca di Lucca, Repubblica: 13 grossi;
- Zecca di Mantova, Lodovico III Gonzaga (1444-78): 1 grosso;
- Zecca di Messerano, Pietro Luca Fieschi (1528-32): 2 cavallotti;
- Zecca di Pesaro, Giovanni Sforza (1489-1500): 3 grossi;
- Zecca di Piacenza, Sede vacante 1523: 1 grosso;
- Zecca di Roma, Alessandro VI (1492-1503): 2 giulii; Giulio II (1503-13): 1 mezzo grosso;
- Savoia, Carlo I (1482-90): 4 parpagliole;
- Zecca di Siena, Repubblica: 1 mezzo senese;
- Zecca di Venezia, doge Andrea Vendramin (1476-78): 1 marcello; doge Andrea Mocenigo (1478-85): 1 marcello; doge Antonio Grimani (1521-23): 2 pezzi da 16 soldi; doge Andrea Gritti (1523-38): 1 pezzo da 16 soldi.

Considerato che le più recenti per data di loro coniazione non oltrepassano il 1530, si può stabilire che esse furono sotterrate dal 1523 al 1529, o per la guerra civile che in quel periodo interessò il Modenese occupato dall'esercito pontificio, o per il seguito emotivo lasciato dal sacco di Roma del 1527.

(oth) Maranello, fraz. Gorzano, chiesa di sant'Alberto, 1875 (dep.: I-XIV sec. (c. 1264 per il gruppo di 46 es.))

Notizia del ritrovamento di diverse monete di età romana e medievale nel corso di scavi condotti nel 1875 in concomitanza con la costruzione del nuovo oratorio di Gorzano (oggi fraz. di Maranello), per i quali si dovette abbattere quello che insisteva sui resti della duecentesca chiesa di sant'Alberto.

- 3 monete sporadiche di età romana (COPPI 1876, tav. LXXI nn. 1-3)

- sesterzio di Ottaviano Augusto;
- quinario di Porcia (?);

- piccolo bronzo di Claudio il Gotico.
- 60 (?) monete di età medievale nello *strato superiore del deposito mariero*, come da descrizione sommaria in COPPI 1876, pp. 11-13:
 - 21 denari AR delle zecche a nome di *fredericvs* delle zecche di Bergamo, Brescia, Cremona, Milano;
 - 3 denari AR di Enrico VI (1191-97), zecca di Bologna;
 - 4 AE di *Opitivs marchio* (1354), zecca di Ferrara;
 - 1 denaro AR di *Nicholaus marchio* (1371), zecca di Ferrara;
 - 1 denaro AR a nome di *henricvs*, zecca di Lucca;
 - 3 denari AR, zecca di Mantova;
 - 1 denaro imperiale MI, Luchino Visconti, zecca di Milano;
 - 22 denari AR a nome di *fredericvs* delle zecche di Modena e Parma;
 - 1 denaro MI di Filippo di Svevia (1207), zecca di Parma;
 - 1 denaro MI, zecca di Pisa;
 - 2 denari MI di Nicolò Maltraversi vescovo (1212-42), zecca di Reggio Emilia.

Tra le monete medievali, 46 databili tra la fine del XII e la metà del XIV secolo (ma datazione da rivedere) avrebbero costituito un unico nucleo, e dunque un ripostiglio.

Le indicazioni riportate in COPPI 1876 non sono sempre precise e non sono chiari i contesti e le consistenze dei ritrovamenti. La moneta di Claudio il Gotico sarebbe stata rinvenuta negli strati più bassi della chiesa (*nel levare l'ultimo sasso del fondamento*, stando a quanto riportato in COPPI 1876).

Cons.: Modena, Musei Civici (?).

Bibl.: COPPI 1876, tavv. LXXI-LXXII (illustra le tre monete romane e 24 monete medievali); CREPELLANI 1877, pp. 276-279; SOGLIANI 1995, pp. 25-29 (riproduce le due tavole del Coppi; a p. 31 riproduce – solo un lato – quattro monete tra quelle trovate?); SACCOCCI 1998b, p. 55 n. 3 (cita 16 denari di Modena con la M su 46 pezzi, datando la deposizione la 1264 c.).

(SF) Nonantola, abbazia di san Silvestro, scavi fino al 2009 (dep.: I-XIX secc.)

Da scavi condotti dall'Università di Venezia sino al 2009 a Nonantola, 31 monete complessivamente rinvenute tra l'abbazia di san Silvestro e la Torre dei Modenesi (v. ritrovamento n. 6085). Per la pessima conservazione di due di esse non è stata possibile una classificazione, eccetto la loro origine medievale. Anche per altre due di epoca romana, a causa della grave usura, non è stato possibile classificarle in modo accurato.

- UTS 7: una sola moneta poco leggibile ma riconducibile con grande probabilità ad un asse romano dell'inizio del I secolo d.C.;
- UTS 8: due denari della zecca di Venezia al tipo *Christus imperator* che furono emessi nei primi tre decenni dell'XI secolo;
- UTS 11: otto monete di cui una non classificabile. Vi sono due denari della zecca di Venezia al tipo *Christus imperator* (1002-1027); un denaro piano della zecca di Verona a nome dell'imperatore Corrado II (1027-1039) e uno scodellato, più tardo; un denaro della zecca di Lucca da collocare nella prima metà del XII secolo; un denaro della zecca di Ferrara emesso probabilmente dopo la metà del XIII secolo. Dallo stesso settore proviene un sesino della zecca di Modena a nome di Cesare d'Este (1595-1628) e nel terreno superficiale di splattamento è stato rinvenuto un sampietrino della zecca pontificia di Gubbio (1796). Un'ulteriore moneta non è classificabile per la corrosione.
- UTS 16: due monete, un grosso della zecca di Trento della metà del XIII secolo ed un quattrino di Siena dell'inizio del XVI secolo;
- UTS 22: sette monete tra cui una romana ed una carolingia di Ludovico I (o Lotario I?) spezzata a metà e di cui non è individuabile la zecca di provenienza; due denari della zecca di Lucca della fine dell'XI secolo; una moneta della zecca di Piacenza di lega d'argento molto bassa attribuibile al XIII secolo; un grosso aquilino della zecca di Merano; un sesino della zecca di Modena del XVII secolo.
- UTS 23: denaro di Bologna del XIII secolo.

In BALDASSARRI 2021, p. 134, nel citare i tre denari di Lucca si indicano come da:

- US 1107: 1 denaro di Lucca per Enrico IV, 1094-1105 circa;
- US 22089: 2 denari di Lucca per Enrico IV, 1094-1105 circa (ma datazione US XIII-XIV sec.).

Bibl.: CANTATORE, CHIMIENTI 2018 (catalogo critico dei materiali); CHIMIENTI 2018; BALDASSARRI 2021, Appendice B2 [J2] (cita solo i tre denari di Lucca).

Discovery of the find: discovery during archaeological investigations

(SF) Nonantola, Torre dei Modenesi, n.s. (ante 2005) (dep.: XI-XIX secc.)

Da scavi condotti nella Torre dei Modenesi a Nonantola, 7 monete databili tra XI-XII e XIX secolo, di cui una illeggibile:

- 2 denari, zecca di Lucca, secondo quarto XII sec.;
- 1 denaro, zecca di Bologna, 1191-1236 c.;
- 1 denaro terzolo, zecca di Milano, prima metà XIII sec.;
- 1 quattrino, zecca di Urbino, 1508-38;
- 1 centesimo 1822, zecca di Milano;
- 1 denaro illeggibile, probabilmente di età medievale, XIV sec.

L'area da cui provenivano fu definita UTS 9 e corrisponde al piano stradale della via di uscita dalla fortificazione costruita dai Modenesi dopo la metà del XIII secolo per affermare e difendere dai Bolognesi la propria sovranità su Nonantola.

Bibl.: CHIMIENTI 2005 (descrizione dei materiali); CANTATORE, CHIMIENTI 2018 (cita il ritrovamento, riepilogando i materiali in tab. 4, p. 247); BALDASSARRI 2021, Appendice B2 [K2] (cita le monete di Lucca).

Nature of the site at the time of concealment or loss: military settlement (camp, castrum, sighting tower)

(oth) Nonantola, urna di san Silvestro, ricognizione 1991 (dep.: n.s.)

26 monete databili tra la metà del XIV e la metà del XV secolo:

- 8 quattrini anonimi pontifici di Bologna;
- 4 quattrini della monetazione autonoma del Comune di Bologna;
- 9 denari della zecca di Ferrara: 2 conati sotto Leonello D'este e databili al 1447, 6 sono anonimi ma attribuibili a Leonello e battuti intorno il 1449 ed uno è a nome di Borso D'Este, databile al 1471
- 1 quattrino di Firenze;
- 1 quattrino di Siena di XIV secolo;
- 1 moneta della Repubblica di Pisa coniata tra il 1313 e il 1494, citata come in rame ma che in realtà dovrebbe essere in argento;
- 1 bolognino di Ancona;
- 1 moneta ungherese che, seppur molto consunta, è stata catalogata come un denaro in argento a nome di Mattia Corvino e coniata tra il 1458 e il 1490.

(SF) Novi di Modena, loc. Santo Stefano, abitato fortificato, n.s. (dep.: XII sec.)

Mancano i riferimenti alle unità stratigrafiche o comunque ai depositi di rinvenimento; monete comunque apparentemente trovate come singole. Notati:

- 2 denari di Lucca nome di Enrico V, tipo Matzke H3ab (1105-1125);
- 5 denari di Lucca nome di Enrico V, tipo Matzke 4Ha-b, infortiatus (1105-1125);
- 3 denari di Lucca nome di Enrico V, tipo Matzke 4Ha-b, communis (1160-1181);
- 3 denari di Lucca nome di Enrico V, tipo Matzke 5Ha-b, brunus (1160-1181/1181-1200 circa), di cui uno forse un falso d'epoca.

(H) Fidenza, n.s. (dep.: secondo quarto XIV sec.)

Notizia del ritrovamento di un tesoretto composto forse da alcune centinaia di monete rinvenuto a Fidenza alcuni anni prima del 2006 e disperso sul mercato antiquario.

Composizione incerta, è possibile fosse composto da monete delle zecche di Piacenza, Parma, Pavia e Cremona, forse Brescia, oltre a due denari imperiali della zecca di Chivasso a nome di Teodoro I Paleologo (1307-1338).

Il tesoretto sembra contenesse anche un denaro scodellato con legenda *svictoris*, attribuito in passato alla zecca di Vittoria (*CNI* 9, pp. 744-745, nn. 1-10), in cattivo stato di conservazione e frammentario.

(SF) Palanzano, fraz. Vairo, loc. I Monti, n.s. (ante 2000) (dep.: n.s.)

Segnalato ritrovamento di 46 monete antiche.

In BAZZINI 2006b se ne danno indicazioni sporadiche:

- 1 denaro, forse coniato a Volterra a partire dall'inizio degli anni Novanta del XII secolo ad imitazione del denaro di Lucca;
- 1 denaro mezzano (scodellato?) della zecca di Brescia;
- 1 denaro piano della zecca di Mantova;
- 1 denaro inforziato piano di Cremona (anche un secondo denaro?);
- 3 bolognini piccoli;
- 2 denari ferrarini, zecca di Ferrara;
- 1 doppio denaro di zecca della Provenza della fine del XIV sec.;
- monete delle zecche di Parma, Pisa, Firenze, Siena, Lucca, Perugia, oltre a esemplari cinquecenteschi della zecca di Roma.

Nei pressi del ritrovamento, resti di strutture murarie attribuibili alla antica chiesa scomparsa nel XVII secolo (per frana) e del campanile. Tali resti sono stati individuati dopo lavori di sistemazione e di disboscamento di un campo per renderlo coltivabile. I resti della chiesa sono stati coperti da uno strato di terra.

La chiesa sorgeva in località *ai Monti* presso il campo del *Campanilaccio*. A esso doveva essere affiancato l'oratorio di S. Mario della Serra (BACCHINI 2000). Sempre nell'area del *Campanilaccio* G. Capacchi (*Palanzano e le sue Valli*, "Le Valli dei Cavalieri rassegna di storia e vita dell'Alta Val d'Enza e della Val Cedra" 19 (2002), pp. 47-80) colloca *reperti romani cocci avanzi di fusione rinvenuti in superficie*.

(SiF) Parma, Palazzo vescovile, n.s. (dep.: 303 d.C.)

Alcuni sondaggi all'interno del cortile del Palazzo vescovile hanno portato alla luce, nell'angolo sud-ovest, immediatamente sotto l'acciottolato, una imponente struttura formata da due muri ortogonali, costruiti col reimpiego di sesquipedali interi e frammentari legati con malta. Essa appoggiava in parte su fondazioni in cui erano utilizzati anche grossi blocchi lapidei squadrati di epoca romana, in parte sui resti di un edificio databile al IV sec. d.C., come suggerisce la presenza in un livello di terreno in fase con la pavimentazione di una moneta AE coniata nel 303 d.C. per i *vicennalia* dell'Imperatore Diocleziano.

Nature of the site at the time of concealment or loss: necropolis / cemetery

Other characteristics of the materials: pierced coins

(H) Parma, vicolo Scutellari, ex scuola De la Salle, n.s. (dep.: post 1312)

Nel corso di uno scavo archeologico nel cortile dell'ex Scuola De La Salle, in vicolo Scutellari, a Parma per l'edificazione di appartamenti con garage interrati, è stato rinvenuto, racchiuso all'interno di un vaso da mensa di forma chiusa, alla profondità di -2 m. dal piano di calpestio

attuale, un tesoretto composto da 290 monete di zecche italiane e straniere, di cui 5 d'oro e 285 d'argento

Il vaso presenta un corpo ovoide, bocca trilobata con bordo a collarino ed ansa a nastro impostata subito sotto il labbro, piede appena accennato. Una vetrina impermeabilizzante giallo ocra riveste, sia all'interno che all'esterno, il biscotto di colore rosso. Il contenitore, che potrebbe essere un sottoprodotto delle manifatture di maiolica arcaica, si può ben inquadrare nell'ambito di produzioni locali ascrivibili alla prima metà del 1300. Come forma richiama quella delle oliere, diffuse in area romagnola e segnalate in diversi contesti della regione, databili intorno alla prima metà del 1300. Il vaso era interrato entro una grande buca riempita di ciottoli e coperto da una pavimentazione piuttosto sconnessa in laterizi disposti di piatto, all'interno di un ambiente inserito in una porzione di borgo medievale affacciato su un viottolo glareato, la cui vita si colloca intorno al XIII secolo.

Il *terminus post quem* per la chiusura del ripostiglio è dato dal fiorino grosso da 2 soldi (*popolino*) di Firenze generalmente attribuito al primo semestre del 1312. Altri indizi fanno comunque pensare che l'interramento debba essere avvenuto non molto tempo dopo tale data. Le monete di Venezia chiudono con le emissioni del doge Pietro Gradenigo (25 novembre 1289 – 13 agosto 1311), del quale sono presenti un ducato e quindici grossi. Sono inoltre rappresentati con le loro monete i dogi immediatamente precedenti al Gradenigo, mentre mancano sia quelle del breve dogato di Marino Zorzi (23 agosto 1311 – 3 luglio 1312), sia quelle del lungo governo di Giovanni Soranzo (13 luglio 1312 – 31 dicembre 1328). Il ripostiglio contiene inoltre 22 esemplari degli ultimi ambrogini milanesi comunali, ma sono del tutto assenti le monete che Enrico VII di Lussemburgo fece coniare nella zecca lombarda alla fine del 1310, subito dopo il suo arrivo.

Oltre agli esemplari di Firenze, Milano e Venezia, il gruzzolo comprende grossi d'argento di Arezzo (1 esemplare), Bologna (7), Cremona (1), Merano (10), Parma (1), Piacenza (1), Pisa (3) e Siena (1).

Se si esclude un bolognino di Bologna databile a circa la prima metà del XIII secolo e due matapan di Venezia, della prima metà del Duecento, tutte le altre monete appartengono alla seconda metà del Duecento, con un addensamento soprattutto negli ultimissimi decenni del secolo e nei primi anni di quello successivo. Di Genova sono presenti quattro genovini d'oro, tutti databili all'incirca tra il 1252 e il 1280-85.

Il numero maggiore di monete è costituito da grossi tornesi: 138 a nome dei re di Francia, 72 a nome di Carlo d'Angiò, un grosso tornese emesso a Bruxelles da Jean II duca di Brabante (1294-1312) e uno della zecca di Florennes (Belgio) a nome di Thibaut II di Lorena (1281-1312).

(H) San Prospero Parmense, loc. Quingento, 1870 (dep.: V-IV sec. a.C.)

Ripostiglio di otto lingotti di *aes signatum*, del tipo "a ramo secco", scoperto nel 1870 a Quingento di San Prospero.

Il ritrovamento parmense contava originariamente otto pezzi, sei dei quali furono acquistati per il Museo Nazionale di Parma da Luigi Pigorini, che allora ne era il direttore. Gli altri due erano stati venduti dalla proprietaria del terreno di ritrovamento, una certa signora Isotta Borsi in Bianchi, a Vittorio Poggi, appassionato di archeologia. In seguito, nel 1877, uno dei due lingotti, quello più pesante, fu acquistato dal Münzkabinett degli Staatliche Museen di Berlino, presso le cui collezioni tutt'ora si trova, mentre dell'altro, quello meglio conservato, ceduto da Poggi al marchese Carlo Strozzi di Firenze, noto collezionista, se ne persero le tracce nel 1907 quando la collezione cui apparteneva fu venduta all'asta e solo di recente è stato riscoperto nei depositi del Museo Correr di Venezia.

Cons.: Smembrato: 6 es. a Parma, Museo Archeologico Nazionale; 1 es. a Berlino, Staatliche Museen, Münzkabinett; 1 es. a Venezia, Museo Correr.

Bibl.: PIGORINI 1874; CRISAFULLI 2011 (con esame metallografico dell'esemplare al Museo Correr di Venezia).

(H) Farini, fraz. Groppallo, in un fondo agricolo tra Videzzate e Costa Biancona, anni '40 o '50 del XX secolo (dep.: c. 270 d.C.)

Nell'immediato dopoguerra, in un fondo agricolo tra Videzzate e Costa Biancona (Groppallo di Farini, Piacenza), durante i lavori agricoli un contadino rinvenne un ripostiglio di antoniniani. Le notizie sul ritrovamento, non verificabili e molto scarse a causa dei quasi settant'anni trascorsi e per il riserbo mantenuto dall'autore della scoperta, riportano che il gruzzolo dovesse essere consistente.

Il contadino, tale Cavanna, lo raccolse in un'area archeologica d'età romana, verosimilmente un insediamento rustico. Non avendo nulla con cui trasportare le monete riempì al colmo il proprio cappello. Fattele esaminare e appurato trattarsi di metallo non pregiato – rame molto ossidato per la precisione – Cavanna disperse il rinvenimento in circostanze che non ci sono note.

Le monete oggi individuate, complessivamente 108, si distribuiscono cronologicamente in un solo decennio, tra 260 e 270, tra gli imperatori Gallieno e Quintillo. L'occasione del seppellimento è da porre in relazione con le scorrerie di Alamanni (Iutungi e Marcomanni) che nel gennaio 271 si scontrarono presso Piacenza, tra paludi e foreste, con le truppe di Aureliano accorse dai Balcani, riuscendo a sopraffarle. È quindi più che un'ipotesi considerare l'anno 270 come quello dell'occultamento del tesoretto. Fosse vera la circostanza a noi riferita sul rinvenimento, ovvero che le monete giacessero in un contesto di macerie combuste e carboniose, l'incendio che avrebbe distrutto l'insediamento di Videzzate non potrebbe che essere stato provocato dalle devastazioni che la vittoria degli Alamanni portò all'interno delle valli appenniniche piacentine-veleiate.

Le monete sono tutte di un'unica tipologia: si tratta di 108 antoniniani in bassa e bassissima mistura d'argento, conati durante i regni degli imperatori Gallieno da solo (260-268), Claudio Gotico (268-270) e Quintillo (prima metà del 270, per pochi mesi). Sono presenti anche quattro esemplari emessi da Gallieno a nome della moglie Cornelia Salonina. Le monete più antiche sono quelle di Gallieno e nessuna di esse appartiene al periodo di regno congiunto tra l'imperatore ed il padre Valeriano (253-260). L'arco cronologico coperto dalle monete di Videzzate appare relativamente ristretto, andando dal 260 ai primi mesi del 270.

Cons.: In larga parte disperso, solo 108 esemplari sopravvissuti e consegnati alla Soprintendenza dei Beni Archeologici di Parma.

(H) località imprecisata (nel Piacentino), n.s. (c. 1521-28) (dep.: n.s. (c. 1521))

In MORBIO 1870, pp. 171-172, si fa riferimento ad alcuni manoscritti originali nei quali compaiono cenni a ritrovamenti di monete. In uno di questi manoscritti (*Codice MS., N. 326 della Biblioteca*) si riporta che una forte somma di denaro fu nascosta nel Piacentino *ob novitates guerrarum* (1521) e ritirata poi da Gioffredo Ferrero, ministro delle finanze del re di Francia, d'ordine di Lautrec (Odet de Foix), suo generale.

Nessuna indicazione sulla natura delle monete né sull'epoca della scoperta, ma considerando lo svolgimento degli eventi bellici e la data di morte del Lautrec (1528) si può circoscrivere il ritrovamento al 1521-28.

(SiF) Piacenza, Cantone del Cristo, 1998 (dep.: n.s.)

Nel 1998 si iniziarono gli scavi per la realizzazione di una nuova ala dell'ospedale di Piacenza. Sui livelli romani vennero individuate due sepolture.

Sul fondo, pavimentato in mattoni, sono stati rinvenuti i resti sconnessi dei defunti e alcuni elementi del corredo: due vasetti fittili in frammenti, una moneta in bronzo, due anette in bronzo, due pedine da gioco in calcare e alcuni frammenti in bronzo placcati in argento.

(SF) Piacenza, incrocio tra via Campo della Fiera e viale Risorgimento, 1981 (dep.: II sec. a.C. – fine I sec. d.C.)

Nel 1981, durante lo scavo per la costruzione del Palazzo ENEL venne intercettata una complessa stratigrafia archeologica.

Segnalato asse del monetario *L. Sempronius Pitio*, trovato nel riporto per colmare il dislivello tra mura e declivio del terrazzo alluvionale su cui sorge la città. La moneta non proviene dalla fossa di fondazione delle mura, ma da uno strato che ad esse si addossava per rendere uniforme il piano naturalmente inclinato: forse intrusiva?

Segnalate altre due monete: una databile al 41 d.C. e una di epoca flavia.

Discovery of the find: fortuitous discovery, construction sites / road works

Nature of the site at the time of concealment or loss: urban settlement (oppidum, colony, town)

(H) Piacenza, piazza Duomo, 1857 (dep.: n.s.)

Nel 1857, in occasione di scavi in piazza Duomo per le fondazioni della colonna sulla quale sarebbe stata messa la statua della Beata Vergine della Concezione, venne intercettata una complessa stratigrafia archeologica. Si rinvennero diverse sepolture, alcune «alla rinfusa» e parte in casse laterizie, delle quali è difficile dare una cronologia più precisa.

Viene segnalata la presenza di una sepoltura a inumazione a cassa con fondo in mattoni romani, intonacata sui lati e coperta da due lastre di arenaria che interrompeva una conduttura (parte costituita da fistula in piombo e parte in marmi di reimpiego e laterizi romani legati da «cemento con pozzolana») che fuoriusciva da un corpo a sei lobi a stella. Al principio di questo condotto venne ritrovato un gruzzolo di 60 piccole monete di rame del diametro di 8 mm.

Nature of the site at the time of concealment or loss: urban settlement (oppidum, colony, town); isolated

(SF) Piacenza, piazzale Plebiscito (nel 1892, via Sopramuro, casa Tinelli, nei pressi di san Francesco), 1892 (dep.: n.s.)

Nel 1892 vennero effettuati degli scavi in via Sopramuro fino alla profondità di 5 m per la costruzione di una cantina da parte della famiglia Tinelli.

Sono probabilmente ascrivibili a questo periodo i rinvenimenti di: molte ossa umane; un sepolcreto a pareti in laterizi romani e il coperchio in due pezzi di pietra calcarea di diversa

provenienza, uno anepigrafo a sezione ottagonale e uno con resti di iscrizione romana i quali coprivano una inumazione conservata con orientamento E-W e corredo composto da una spada in ferro di oltre 1 m di lunghezza. Nei suoi pressi venne ritrovata inoltre una bottiglia fittile stampigliata di tradizione longobarda perfettamente conservata.

Nei pressi del sepolcreto vennero rinvenuti inoltre un busto femminile in marmo statuario acefalo, senza braccia a un terzo dal vero; una mano in bronzo con resti di doratura; resti di mosaico bicromo e parecchie monete imperiali romane.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: burial, unknown context

(SiF) Piacenza, via Alberoni, lato nord di san Savino, 1999 (dep.: VI-VII sec.)

Nel 1999, insieme a lavori di sistemazione della fognatura cittadina, venne rifatta anche la pavimentazione stradale di via Alberoni. Nei pressi di San Savino venne individuata una sepoltura in cassa laterizia legata da limo costituita da due spallette in sesquipedali frammentari, in posizione verticale e due testate costituite da sesquipedali posti con orientamento N-S. All'interno venne rinvenuto uno scheletro intero in decubito supino, con orientamento W-E e arti superiori disposti lungo i fianchi relativo a una giovane donna deposta con corredo composto da una collana con vaghi in pasta vitrea al collo, una fusaiola in ceramica a stralucido presso l'omero sinistro, una fibbia in bronzo sul pube, una catena in ferro con cinque anelloni (due più grandi e tre più piccoli) presso la mano sinistra e un coltello, due borchie in ferro e due frammenti di bronzo irrimediabilmente (forse due monete) dei quali non è stata rilevata la posizione. Sulla base di questi elementi è possibile datare la deposizione alla seconda metà del VI secolo, prima metà del secolo successivo.

Discovery of the find: fortuitous discovery, construction sites / road works

Nature of the site at the time of concealment or loss: urban settlement (oppidum, colony, town); isolated

(SF) Piacenza, via Alberoni, sagrato della chiesa di san Savino, 2000 (dep.: n.s.)

Nel 2000, in concomitanza con lavori di sistemazione della fognatura cittadina, venne rifatta anche la pavimentazione stradale del sagrato della chiesa di san Savino.

Sul lato E dell'area di scavo, si individuarono 4 sepolture tagliate dalla posa della pavimentazione del sagrato: erano costituite da strutture rettangolari di laterizi legati da malta friabile. Da S a N si

avevano due tombe parallele con orientamento E-W, una tomba con orientamento N-S e una nuovamente con orientamento E-W. All'interno della prima fu rinvenuto un anellone in bronzo da mettere in relazione ai resti scheletrici, che parevano appartenere a più di un individuo. Nella seconda tomba è stata trovata una moneta, oltre ai resti scheletrici di almeno otto inumati, in connessione anatomica e in posizione supina con cranio ad W. Nella terza sono stati rinvenuti un oggetto in bronzo (fibbia?) e un anello sempre in bronzo con castone e relativa falange. All'interno erano presenti ossa non in connessione anatomica di almeno 9/10 individui. La quarta tomba ha restituito 7 monete (nella relazione definite di bronzo), 15 elementi tubolari in bronzo, 12 chiodi in ferro, 3 fibbie di cui 1 di ferro, 1 elemento in ferro e 4 frammenti in ferro, oltre alle ossa di diversi individui. Furono poi rinvenute altre due sepolture, da una delle quali proveniva un frammento di terra sigillata decorata.

Discovery of the find: *discovery during archaeological investigations*

Nature of the site at the time of concealment or loss: *necropolis / cemetery; lake, river, water source,*

(H) Piacenza, via Pietro Bubba 16, n.s. (ante 22 febbraio 2011) (dep.: seconda metà XIII sec. – prima metà XIV sec.)

Un'indagine investigativa svolta dai militari del Nucleo Polizia Tributaria Guardia di Finanza di Milano, il giorno 22 febbraio 2011 portava al sequestro di due nuclei di monete medievali illecitamente detenute. Da quanto emerso dall'istruttoria, le monete, per un ammontare complessivo di 636 pezzi, erano state asportate dall'interno di un cantiere edile aperto nella periferia sud di Piacenza, in Via Bubba 16. Il materiale numismatico sarebbe stato rinvenuto all'interno di una delle trincee di scavo eseguite per la gettata di plinti di fondazione di un edificio in costruzione.

Una rapida valutazione preliminare, eseguita dall'allora Soprintendenza per i Beni Archeologici per dell'Emilia-Romagna (SAER), aveva portato all'individuazione di diverse tipologie di grossi d'argento delle zecche di Milano, Cremona, Pavia, Piacenza, Parma, Bologna, Venezia, Lucca, Pisa e Siena e di un piccolo nucleo di grossi tornesi di area francese. Le monete apparivano databili fra la seconda metà del XIII e la prima metà del XIV secolo.

Un'analisi recente (BAZZINI 2023), più approfondita benché ancora preliminare, ha consentito di identificare, tra gli esemplari di matapan, diverse imitazioni coeve del grosso di Venezia, sia di area norditalica (Chivasso, Ponzzone, Torino) sia di area balcanica (Serbia e Banato croato-bosniaco).

Composizione:

- Grossi matapan di Venezia: 354
 - Pietro Ziani (1205-1229): 3
 - Jacopo Tiepolo (1229-1249): 4
 - Marino Morosini (1249-1253): 5
 - Ranieri Zeno (1253-1268): 51
 - Lorenzo Tiepolo (1268-1275): 18
 - Jacopo Contarini (1275-1280): 44
 - Giovanni Dandolo (1280-1289): 33 (+2 incerti)
 - Pietro Gradenigo (1289-1311): 178
 - Giovanni Soranzo (1312-1328): 3
 - Non attribuibili: 13
- Grossi di vario tipo di Piacenza: 89
- Ambogini di Milano: 85
- Imitazioni dei matapan di Venezia del Regno Serbo: 32
- Imitazioni dei matapan di Venezia del Banato Croato-Bosniaco: 1
- Imitazioni delle zecche di Chivasso (3 es.), Ponzzone (1 es.) e Torino (1 es.) dei matapan di Venezia: 5
- Grossi tornesi di Francia e di Provenza: 30
- Grossi di vario tipo di Cremona: 15
- Grossi di vario tipo di Pavia: 6
- Grossi cd. "coi tre santi" di Brescia: 6
- Grossi "con sant'Ilario" di Parma: 5
- Grossi di Pisa: 4
- Grossi di Siena: 2
- Grossi di Bologna: 1
- Grossi di Lucca: 1.

Lo studio dei pezzi, in questo momento ancora in corso, ha inoltre permesso di fare alcune ipotesi sulla formazione dei due nuclei di monete. La loro appartenenza ad un unico gruzzolo, in questa fase del lavoro di catalogazione, non può essere data per scontata (BAZZINI 2023).

Discovery of the find: discovery during archaeological investigations

(SF) Ravenna, fraz. Classe, area del porto, scavi 2001-11 (dep.: II sec. a.C. – VIII sec. a.C.)

Tra il 2001 e il 2011, in una collaborazione fra l'insegnamento di Archeologia Medievale dell'Università di Bologna e la Soprintendenza per i Beni Archeologici dell'Emilia Romagna, sono

state condotte indagini archeologiche presso l'area portuale e la Basilica di San Severo, sotto la direzione del prof. Andrea Augenti.

Durante gli scavi sono state portate alla luce un totale di 2.779 monete, 2.559 delle quali provengono dall'area portuale e sono inserite in un arco cronologico compreso tra il II a.C. e l'VIII d.C.

Bibl.: BALDI 2018.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(D) Ravenna, fraz. Classe, basilica di sant'Apollinare in Classe, n.s. (*dep.:* IV-VI sec. d.C.)

In seguito agli scavi condotti all'interno della basilica di sant'Apollinare in Classe, nell'angolo sud-ovest, furono recuperate 1.891 monete mediante la setacciatura ad acqua del terreno archeologico di risulta. Il materiale non è perciò collocabile con precisione nell'ambito della stratigrafia di scavo, ma è generalmente ascrivibile al contesto sepolcrale del Martire e al periodo della sua frequentazione.

La cronologia delle emissioni si estende tra il IV e il VI sec. d.C., con estremi che si pongono al 337-362 / 351-354 d.C. rispettivamente con emissioni di Costanzo II e Costanzo Gallo, e al 512-522 / 526-543 d.C. con monete anonime attribuite al periodo di Teodorico e di Atalarico, e poi con emissioni a nome di Atalarico.

il nucleo delle monete è costituito esclusivamente da nominali bronzei (AE1-4, con principale presenza di AE4).

Notati:

- moneta ostrogota
 - diverse "frazioni" di *folles* AE Teodorico e Atalarico;
 - 3 *decanoummion* AE "municipale";

- 1 *decanoummion* AE Atalarico;
- *pentanoummion* AE Atalarico;
- moneta bizantina
 - 2 “frazioni” *follis* AE Giustiniano I;
 - 3 AE di imitazione (?);
 - 1 ½ *follis* AE Giustiniano I;
 - 1 *decanoummion* AE Giustiniano I.

Gli estremi cronologici dei materiali consentono di individuare un periodo preciso in cui si pongono le offerte devozionali, evidentemente legate al luogo della deposizione del Martire. La documentazione raccolta fa presumere l'interruzione dell'afflusso di fedeli al luogo primitivo di quella tomba dopo il 540-541, ossia quando fu iniziata la costruzione della basilica cimiteriale e di conseguenza le reliquie furono rimosse per essere trasportate in altro luogo.

Cons.: Ravenna, Museo Nazionale.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(SF) Ravenna, fraz. Classe, condotto idrico, n.s. (dep.: II-V sec. d.C.)

Dai pozzetti di ispezione 2 nord e 8 sud del condotto idrico di classe, c. 400 esemplari, in prevalenza di età tardo romana e in pessimo stato di conservazione, con grossa concentrazione di materiale sia verso la fine del IV che nel V secolo d.C.

Le monete si ritrovano nel condotto in seguito a smarrimenti (perse e cadute nel condotto) occasionali, fatta eccezione della deposizione del gruzzolo scoperto negli anni '80 proveniente dal pozzetto 3 (i pozzetti hanno cambiato nome negli anni).

Segnalato anche 1 centesimo di Napoleone come re d'Italia (1805-14), zecca di Milano (?), unica moneta tra quelle finora riconosciute dissonante sul piano cronologico con la totalità degli esemplari recuperati.

In MAMMATO 2014 si sospetta che il gruzzolo proveniente dal pozzo 3 sia lo stesso materiale rinvenuto nel pozzo 8 sud. In base a questa eventualità andrebbe riassegnato il primato per numero di monete tra le fine del IV e gli inizi del V secolo d.C., in coerenza anche con gli altri ritrovamenti effettuati nella area romagnola.

(SF) Ravenna, Santa Croce, n.s. (dep.: n.s.)

Riportate alcune centinaia di monetine di devozione dal V sec. al basso Medio. Evo.

Notate:

- moneta ostrogota
 - $\frac{1}{4}$ *siliqua* AR Teodorico;
 - frazioni di *follis* AE di Teodorico, Atalarico, Theodahat;
- moneta bizantina
 - *follis* AE e frazioni *follis* AE da Giustiniano I a Costantino V, con *tremissis* AV Leone III.

Nello specifico, per le emissioni di Ravenna:

- *decanoummion* AE Giustiniano I/Ravenna (538-565; *DOC* I, 364-365; *MIB* 237/1-2);
- *decanoummion* AE Maurizio Tiberio/Ravenna (583-584; *MIB* 147);
- 3 *decanoummion* AE Maurizio Tiberio/Ravenna (586-602; *MIB* 148);
- *decanoummion* AE Focas/Ravenna (602-603; *DOC* II, 1, 133);
- 3 *follis* AE Eraclio/Ravenna (637-638; *DOC* II, 1, 306);
- $\frac{1}{2}$ *follis* AE Costante II/Ravenna (646-664; *DOC* II, 2, 208);
- *follis* AE Costantino IV/Ravenna (683-684; per ARSLAN 2004i, *DOC* II, 2, 267, ma numero non esistente: refuso editoriale?);
- 4 *follis* AE Costantino IV/Ravenna (683-684; *DOC* II, 2, 92);
- *follis* AE Giustiniano II/primo regno/Ravenna (685-695; *DOC* II, 2, 72);
- *follis* AE Tiberio III/Ravenna (698-705; *DOC* II, 2, 48);
- *follis* AE Giustiniano II/secondo regno/Ravenna (705-711; *DOC* II, 2, 23. 1-2);
- *tremissis* AV Leone III/Ravenna (720-741; *DOC* III, 1, 103);
- 3 *follis* AE Costantino V/Ravenna (751; *DOC* III, 1, p. 94).

Sulla base della tabella riportata in [MORELLI 2003]:

- $\frac{1}{4}$ *siliqua* AR Teodorico;
- 5 *decanoummion* AE "municipale";
- 7 *pentanoummion* AE Atalarico;
- 15 *nummi* AE Theodahat;
- 15 *nummi* AE Vitige;
- 5 $\frac{1}{2}$ *follis* AE Giustiniano I (5);
- 4 *decanoummion* AE Giustiniano I;
- 3 *pentanoummion* AE Giustiniano I;
- 4 *decanoummion* AE Maurizio Tiberio;
- $\frac{1}{2}$ *follis* AE Focas;
- 4 AE *follis* Eraclio;

- ½ *folles* AE Costante II;
- 2 *folles* AE Giustiniano II;
- 2 *folles* AE Tiberio III;
- 2 *folles* AE Giustiniano II/II regno;
- *tremissis* AV Leone III;
- 3 *folles* AE Costantino V.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: castle / fortress

Reggio Emilia

(SF) Albinea, fraz. Borzano, castello, scavi 2001-02, 2006 (dep.: secc. XIII-XVII)

Nell'autunno 2001 e sino a tutto il 2002, grazie alla decisione della Soprintendenza ai Beni Archeologici dell'Emilia Romagna di riprendere ad indagare l'area attorno al castello, sono cominciati i lavori in quello che è stato in seguito definito settore "A". L'area ha restituito il maggior numero di materiali, in prevalenza ceramiche, ma anche 82 monete, per 69 delle quali è stata possibile la classificazione. Per 3 delle restanti 13 sono già state individuate le zecche in cui sono state coniate (Modena, Parma e Piombino), ma non si è ancora in possesso di tutti gli elementi per poterne proporre una scheda; le rimanenti dieci sono pressoché inclassificabili dato l'alto grado di consunzione.

Nell'autunno 2006 e sino alla fine dello stesso anno si è ripreso ad indagare il settore "A", dove sono emerse altre 30 monete, di cui 23 classificate e 7 ancora da decifrare, oltre ad un tondello monetale non coniato.

Rinvenuti anche 16 tondelli non monetati forse attribuibili a una zecca clandestina, e una tessera di conto cd. "di Norimberga" databile al XVI-XVII secolo, forata. Zecche di Ancona, Bologna, Bozzolo, Casale Monferrato, Fano, Ferrara, Genova, Guastalla, Mantova, Milano, Mirandola, Modena, Novellara, Parma, Piacenza, Reggio Emilia, Sabbioneta, Ungheria (obolo di Wladislao o Lodovico II 1490-1526), zecca francese (doppio tornese di Luigi XIII), con monete in AV, AR, MI e AE. Il numero maggiore dalle zecche di Reggio Emilia e di Modena. Excursus dal XIII sec. al XVIII sec., oltre a due monete di età romana.

Per altre monete da tomba, v. ritrovamento n. 10037.

Bibl.: FORGHIERI 2007 (catalogo completo dei materiali, ma illustrazione parziale); BAZZINI 2015.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: castle / fortress

Other characteristics of the materials: pierced coins

(SF) Albinea, fraz. Borzano, castello, necropoli, scavi 1999-2008 (dep.: secc. XII-XIV)

La prima campagna di scavi, condotta a partire dalla primavera del 1999, ha interessato l'area del sepolcreto posta dietro l'abside della chiesa di San Giovanni Battista. L'indagine delle tombe ha restituito pochissimi reperti riconducibili a corredi funebri, fra i quali due monete:

- tomba 6 (appartenente alla fase 4 - XIII-XIV secolo - di utilizzo del sepolcreto, che testimonia il riutilizzo delle sepolture anche in epoca successiva), US 26:
 - denaro scodellato MI a nome di *henricvs*, zecca di Milano, tipologia da datare al XIII sec., 0.50g, 14mm (inv. 247544);

- tomba 7 (con resti scheletrici attribuibili, secondo la datazione al C14, ad un individuo vissuto prima del XIV secolo), US 29:
 - denaro, zecca di Ferrara, periodo comunale, XIII sec. – 1344 (inv. 247543).

Altre monete da scavi successivi:

- tomba 34, US 313:
 - denaro terzolo, zecca di Milano, ultimi decenni XII sec. (?);
- tomba 35, US 313:
 - denaro scodellato a nome di *henricvs*, zecca di Milano, 1014-65 (?);
- US 317:
 - denaro cremonese a fono di *fredericvs*, zecca di Cremona, ante 1184;
 - denaro imperiale, Luchino Visconti, zecca di Milano, 1339-49;
 - denaro mezzano (torellino), zecca di Parma, 1341-44 (?);
 - denaro scodellato, zecca di Verona, 1056-1152 (?).

Per altre monete dall'area del castello, v. ritrovamento n. 6154.

Bibl.: GANDOLFI, FORGHIERI 2007 (per le due monete degli scavi del 1999); ANONIMO 2015 (esamina l'area del ritrovamento, citando le monete); BAZZINI 2015 (catalogo completo dei materiali).

(SF) Canossa, castello e borgo, scavi 2009, 2018 e 2021 (dep.: XII-XVIII secc.)

Diverse monete di età tardomedievale e moderna, in corso di studio, dall'area del bordo e del castello, in parte recuperate nel corso di scavi condotti dall'Università di Bologna nel 2021:

- scavi 2009, area del castello

- denaro MI, zecca di Bologna, 1191-1236 (sondaggio 6, US 2, reperto 2; inv. 553; g 0,47; diam. 15 mm; 85°);
- denaro MI, zecca di Ferrara, Obizzo III d'Este, 1344-52 (sondaggio 5, US 2, reperto 3; inv. 554; g 0,44; diam. 13 mm; 85°; *CNI* 10, p. 419 n. 3);
- sesino MI, zecca di Sabbioneta, Vespasiano Gonzaga, 1564-91 (sondaggio 6, US 2, reperto 4; inv. 555; frammentaria; g 0,72; diam. 16 mm; 65°; *CNI* 4, p. 547 n. 71);

- raccolta di superficie nell'area del borgo, 2009

- quattrino MI, zecca di Desana, Delfino Tizzone, 1583-98 (inv. 533; frammentata; g 0,34; diam. 16 mm; 0°);

- scavi 2018, area del borgo

- denaro MI, zecca di Macerata, papa Giovanni XXII, 1316-34 (area 1000, US 1000; inv. 22.6; g 0,34; diam. 15 mm; 257°; *CNI* 13, p. 345 n. 4);
- sesino MI, zecca di Mantova, emissione anonima databile all'età di Carlo I (1627-37) o Carlo II Gonzaga-Nevers (1637-65) (area 1000, US 1000; inv. 22.4; g 0,85; diam. 14 mm; 33°; *CNI* 4, p. 264 n. 41 var.);
- denaro MI, zecca di Pavia, Francesco I Sforza, 1450-66 (area 1000, US 1000; inv. 22.5; g 0,51; diam. 14 mm; 305°; *CNI* 4, p. 507, nn. 22-27);

- scavi 2019, area del castello

- bagattino MI, zecca di Ferrara, Alfonso I d'Este, 1504-34 (area B, saggio 6, US 5, reperto 3; inv. 22.1; g 1,54; diam. 17 mm; 273°; *CNI* 10, p. 453 n. 96 var.);
- quattrino MI, zecca di Milano. Filippo III di Spagna, 1598-21 (area A, saggi 1-2-3, US 33; inv. 22.2; g 2,19; diam. 18 mm; 320°; *CNI* 5, p. 299 n. 29);

- collezione, castello

- denaro MI, zecca di Bologna, XIII-XIV sec.? (inv. inv. 164; g 0,75; diam. 18 mm; ?; *CNI* 10, pp. 2-9);
- da 4 soldi 1766 MI, Repubblica Corsa, zecca di Corte, Pasquale Paoli generale, 1762-68 (inv. 165; g 1,15; diam. 20 mm; 0°);

- altro

- moneta AR/MI illeggibile (18mm, 0.75g): se confermata la lettura delle lettere 'OR' nella legenda, con caratteri piatti e larghi, potrebbe eventualmente trattarsi di un denaro

imperiale trecentesco della zecca di Parma.

Tra i materiali rivenuti nel 2018 nel borgo, una insegna di pellegrinaggio.

Bibl.: CANTATORE 2023 (illustra 9 es., escludendo il quattrino MI di Milano e la moneta illeggibile riferibile – dubitativamente – a Parma).

(SF) Quattro Castella, Monte Lucio, necropoli e chiesa presso il castello, scavi 2011-12 (*dep.:* IV-XVI secolo)

Durante due campagne di scavo presso il castello di Monte Lucio, nelle estati del 2011 e del 2012, è stata indagata archeologicamente una vasta area comprendente la chiesa con l'annessa

necropoli posta all'interno del fortilizio. Dalle ricognizioni dell'area e dalle stratigrafie provengono 67 monete, delle quali 66 riconoscibili.

I rinvenimenti sono così classificati:

- 2 monete tardo antiche;
- 2 denari medievali di Ancona;
- 4 denari planeti e 1 mezzo denaro planetario medievali di Bergamo;
- 1 bolognino piccolo e 1 bolognino grosso medievali di Bologna;
- 2 denari medievali di Como;
- 1 denaro medievale di Cremona;
- 1 denaro ferrarino di tipo nuovo o bagattino e 10 denari medievali di Ferrara;
- 3 denari medievali di Lucca, nello specifico da US 5083, sepoltura 12 (1 denaro della zecca di Lucca 1130), US 5015=5025 (livello di uso degli edifici in pietra dell'ultima fase di occupazione dell'area: 1 denaro di Lucca per Enrico III, IV o V, 1181-1200 circa) e US 5137 (buca formata da radici di pianta, stratificazione sconvolta: 1 denaro di Lucca per Enrico III, IV o V, 1181-1200 circa).
- 1 denaro scodellato, 5 monete da due denari piccoli, 10 quattrini medievali di Mantova;
- 3 grossi aquilini medievali di Merano;
- 6 denari medievali di Milano;
- 1 denaro mezzano di Novara;
- 1 denaro piccolo, 2 denari mezzani, 1 denaro imperiale, 1 torellino medievale e 1 sesino di Alessandro Farnese di Parma;
- 1 denaro mezzano di Pavia (1220-1250);
- 1 quattrino di Pisa (1495-1509);
- 1 denaro parvo medievale e 1 bagattino a nome di papa Leone X di Reggio Emilia;
- 1 denaro mezzano medievale di Tortona;
- 1 mediatino medievale di Verona;
- 1 moneta non identificata.

I due grossi di Merano e i quattro quattrini di Mantova si trovavano uniti in un peculio trovato in una sepoltura. In un'altra inumazione è stato trovato un gruzzolo avvolto da stoffa conservatasi che non è stato possibile aprire e studiare per direttiva della Soprintendenza.

V. anche ritrovamento n. 9993.

Cons.: Reggio Emilia, Museo Civico, magazzino.

Discovery of the find: discovery during archaeological investigations

(H) Reggio Emilia, via Crispi, 1957 (*dep.:* post 493 sulla base delle monete, ma c. metà VI sec. sulla base della datazione dei gioielli)

Tesoro rinvenuto nel 1957 in via Crispi, a 5 m di profondità, all'interno di una cavità coperta da tre blocchi lapidei. Vennero estratte due coppe in argento che fungevano da coperchio per un frammento di *fistula plumbea*, probabilmente proveniente da un ramo pubblico dell'acquedotto, contenente gioielli aurei maschili e femminili e sessanta solidi databili entro il 493: Marciano (3 Cp), Leone I (37: 1 Th, 6 Cp), Leone e Zenone (1 Cp), Basilisco e Marco (1 Cp), Zenone e Leone (1 Cp), Zenone (3 (Rv, 14 Cp). Le monete erano emissioni delle zecche di Costantinopoli (56), Ravenna (3) e Tessalonica (1).

L'insieme degli oggetti era stato sepolto all'interno di un'abitazione privata che faceva parte di un più ampio isolato residenziale, in prossimità di un asse stradale. Le tre *domus* dell'isolato, meglio note oggi da scavi successivi della Soprintendenza Archeologica dell'Emilia Romagna, erano sorte su precedenti livelli tardorepubblicani e presentavano elementi archeologici chiaramente attribuibili dall'età proto-imperiale al IV secolo. Le fasi più recenti erano testimoniate da materiale numismatico di età costantiniana; forse alla stessa fase risalivano anche specifici interventi edilizi di ristrutturazione in uno degli edifici, il cui peristilio colonnato era stato chiuso per mezzo di un muro ricavando in questo modo un ambiente absidato: si tratta di una prassi attestata anche in altri casi, databili generalmente dopo il V secolo, evidentemente per rispondere ad istanze rappresentative e funzionali meglio rispondenti a nuovi modelli sociali del periodo.

Gli elementi del tesoro sono databili tra l'età imperiale e la metà del VI secolo (e dunque in età ostrogota), ma è ben distinguibile un nucleo molto consistente, cronologicamente omogeneo: proprio la composizione dell'insieme e il confronto tra gli oggetti può facilitarne almeno in parte la comprensione. Per quanto riguarda le coppe argentee di chiusura, quella con alto piede troncoconico, vasca decorata a baccellature e orlo con *kyma* lesbio schematizzato può essere confrontata con due esemplari del tesoro di Canicattini Bagni in Sicilia, datato alla metà del VI secolo, una delle quali con analoga decorazione dell'orlo; inoltre, con due esemplari dotati di coperchio dei tesori di Canoscio in Umbria, di Cartagine, con l'orlo non decorato, e di Kostolac (Serbia).

Anche la coppa con piede troncoconico, orlo leggermente estroflesso e iscrizione graffita all'interno del piede SVR, considerata l'abbreviazione del nome dell'artigiano esecutore dell'oggetto, trova stretto riscontro tipologico in tre manufatti del tesoro di Canoscio.

Discovery of the find: discovery during archaeological investigations

(oth) Toano, loc. Castel Pizigolo, scavi 2015-16 (dep.: XII-XV secc.)

Da scavi condotti dall'Università di Bologna nell'area di Castel Pizigolo, 30 es. (23 provenienti in contesto stratigrafico, 7 fuori contesto).

Per quanto riguarda le monete da contesto, 19 es. sono state trovate nell'Area 7000 e per 18 o 19 si può ritenere che fossero parte di un unico gruzzolo originariamente riposto in una nicchia nel solo lacerto di muro conservatosi dell'edificio abitativo (USM 107). Delle restanti, restanti, 3 es. provengono dall'area 1000 e 1 es. dall'area 3000.

Complessivamente, si tratta di 12 monete piccole e 18 grossi, questi ultimi tutti dall'area 3000.

Composizione:

- ritrovamenti singoli (12 es.):

- 6 bolognini piccoli MI, zecca di Bologna;
- 2 denari ferrarini MI, zecca di Ferrara;
- 1 denaro minuto MI, zecca di Genova (?), con legenda che non trova riscontro nelle pubblicazioni e che non appare riconducibile ad alcuna autorità emittente nota;
- 1 denaro enriciano AR, zecca di Lucca (Enrico IV-V?);
- 1 es. da due denari MI, zecca di Mantova;
- 1 es. AR non identificato in quanto illeggibile, forse emissione di Lucca o Pavia dei secc. XII-XIII;

- gruzzolo (18 es.)

- 2 grossi agontani AR, zecca di Ancona;
- 15 grossi bolognini AR, zecca di Bologna;
- 1 grosso bolognino AR, zecca di Modena.

Discovery of the find: discovery during archaeological investigations

(SF) Toano, loc. Castel Pizigolo, pieve di santa Maria in Castello, scavi 2017-19 (dep.: X-XIV secc.)

Nel corso di tre campagne di scavi succedutesi tra il 2017 e il 2019, rivenute 29 monete con una cronologia compresa tra il IV ed il XX secolo (notato AE3 databile 364-392 ma in strato tardo medievale). Considerando solo le emissioni precedenti al 1400, il numero si riduce a 12 al quale si aggiunge il denaro pavese a nome di Ottone III di Sassonia della zecca di Pavia dal settore Gamma. Di queste solo 5 possono essere considerate non residuali, perché rinvenute in stratigrafie compatibili con la loro circolazione: si tratta di due denari di Bologna, uno di Parma, uno di Piacenza e uno di Pisa, conati tra la fine del XII e il XIV secolo, trovati in livelli di XIV secolo.

Le altre monete provengono per buona parte da un livello di epoca rinascimentale, interno alla torre, ottenuto riportando dai dintorni della struttura strati medievali con i relativi reperti. Tra questi ultimi si contano 5 monete, in cattivo stato di conservazione, coniate tra fine XII e XIV secolo nelle zecche

di Arezzo, Bologna, Ferrara, Lucca e Piacenza.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(oth) Toano, loc. Castel Pizigolo, pieve di santa Maria in Castello, scavi 2015-16 (dep.: n.s.)

Da due campagne di scavo condotte nel 2015 e nel 2016 dall'Università di Bologna, varie monete sporadiche in associazione con altri materiali – tipicamente ceramiche, frammenti di pietra ollare e resti di altri elementi di uso domestico – e un ripostiglio di XIII-XIV secolo occultato in un muro.

In dettaglio:

- dall'edificio ecclesiastico (area 1000):

- denaro ferrarino, zecca di Ferrara, databile al 1175/84-1257;
- denaro bolognese, zecca di Bologna, databile al 1191-1234;

- dalla torre (area 3000):

- da due denari (?), zecca di Mantova, databile al 1336-60;

- da un altro edificio (area 7000)

- ripostiglio di monete in ottimo stato di conservazione nascosto in una nicchia del muro, con 18 denari grossi delle zecche di Ancona (2 es.), Modena (1 es.) e Bologna (15 es.) emessi tra il sesto decennio del XIII secolo e il quarto del XIV;
- denaro bolognese piccolo, zecca di Bologna, databile al 1306.

Dall'edificio ecclesiastico anche un denaro minuto della zecca di Genova? In CANTATORE, MANCASSOLA, ZONI 2018, p. 347 si parla di *minuto di Genova proveniente dagli strati di abbandono*, non citato però insieme alle altre monete provenienti dallo stesso sito.

Non si parla inoltre del ritrovamento di alcun denaro della zecca di Lucca, pure citato come proveniente da scavi dell'Università di Bologna condotti in questo sito (v. ritrovamento n. 9995): si tratta di una diversa campagna scavi?

Bibl.: CANTATORE, MANCASSOLA, ZONI 2018, pp. 345-347 (senza descrizione di dettaglio né illustrazione dei materiali, solo fotografia del ripostiglio dall'edificio di area 7000 prima dell'estrazione dalla nicchia).

(uns) Rimini, n.s. (dep.: n.s.)

Monete ostrogote più frequenti delle bizantine; presenza moneta bizantina tra VI e VIII secolo, con zecca di Ravenna, fino a Costantino IV. Per le emissioni bizantine di Ravenna cfr. CALLEGHER 2002: $\frac{1}{2}$ *folles* AE Giustiniano I/Ravenna (559-560; *DOC* I, 345); $\frac{1}{4}$ *siliqua* AR Giustiniano I/Ravenna (552-565; *DOC* I, 339, 2); $\frac{1}{2}$ *folles* Maurizio Tiberio/Ravenna (586-602; WROTH 1908, 156, 283); *folles* AE Costantino IV/Ravenna (680-681; *DOC* II, 2, 90).

Bibl.: [STOPPIONI 1992], pp. 409-432 (catalogo monete ostrogote probabilmente da Rimini); CALLEGHER 2002, p. 268 n. 7.34; ARSLAN 2004i, n. 1960.

(oth) Rimini, chiesa di san Giuliano Martire, sarcofago di san Giuliano, ricognizione 8 giugno 1910 (dep.: secc. IV-XVII)

Dalla ricognizione del sarcofago di san Giuliano condotta l'8 giugno 1910, secondo GEROLA 1911:

- monete di età romana
 - 1 piccolo bronzo di Costantino I (306-337);
- monete di IX-X secolo
 - 1 denaro AR, Ludovico II, zecca di Milano (?);
 - 1 denaro AR, Berengario, zecca di Milano (?);
- monete di età tardo-medievale
 - 1 denaro a nome di *henricvs*, zecca di Venezia;
 - 4 denari a nome di *henricvs*, zecca di Verona;
 - 4 denari, zecca di Lucca;
 - 1 denaro, zecca di Rimini;
 - 1 grosso, zecca di Bologna;
 - 7 denari, zecca di Bologna;
 - 3 denari, zecca di Ravenna;
 - 6 denari, zecca di Ancona;
 - 3 grossetti, zecca di Pisa;
 - 1 obolo, zecca di Melgueil;
 - 1 piccolo, Nicolò da Buna (1338-47), zecca di Trento;
 - 1 diamante, Alfonso II d'Este (1559-97), zecca di Ferrara;
 - 1 quattrino 1610, papa Paolo V, zecca di Bologna;
 - 1 mezzo baiocco 1649, papa Innocenzo X, zecca di Bologna.

Sulla base di quanto proposto in GEROLA 1911, l'esemplare a nome di Ludovico deve essere ritenuto di Ludovico II e non di Ludovico I in quanto il riferimento a *Gnecchi*, 8 riporta a una emissione con tempio testrastilo e legenda *XPISTIANA RELIGIO* coniata su tondello largo. Le attribuzioni alla zecca di Milano delle due monete di IX-X secolo sono suscettibili di revisione.

Bibl.: GEROLA 1911; COUPLAND 2023, p. 117, nota 45 (per la moneta di Ludovico II); MORETTI 2023, pp. 139, 144-146 (elenca i materiali in GEROLA 1911, facendo risalire alla ricognizione del 1584 la deposizione di un diamante della zecca di Ferrara e di un testone di Gregorio XIII descritto da Santini, non più ritrovato).

(SF) San Pietro in Cotto, scavi 2008-09 (dep.: 58 a.C. – V sec. d.C.)

Le campagne di scavo effettuate nel 2008 e 2009 hanno restituito 89 monete, due delle quali sono in argento ed il resto in lega di rame. La maggior parte dei reperti monetali presentavano incrostazioni superficiali e strati di corrosione tipici del degrado del rame archeologico.

L'identificazione dei reperti che qui si presentano è stata possibile solo grazie a paziente lavoro di pulizia e conservazione che ha permesso l'identificazione di molti esemplari, raggiungendo una percentuale di leggibilità del 50%.

Il range cronologico coperto dei reperti rinvenuti dallo scavo si estende dal 58 a.C., fino al V secolo d.C., in una distribuzione che evidenzia un vuoto di presenze durante il II e il III secolo.

(H) Monfalcone, 1892 (*dep.*: post 1312 (per MEC 12, p. 678) o c. 1315 (per STAHL 2000, p. 448))

Ripostiglio, con 1.987 monete (per STAHL 2000, p. 448) o almeno 2.019+1 AR+MI (per MEC 12, p. 678) ritrovati durante i lavori di scavo per le fondamenta del nuovo teatro. Principalmente *Meinhardszwainziger* del XIII secolo, grossi di Venezia e Serbia.

Composizione:

- Acqui Terme, 1 grosso tirolino (Oddone Bellingeri, 1305-13);
- Aquileia, 42 denari (4 Gregorio di Montelongo, 1251-69; 5 Raimondo della Torre, 1273-99; 3 Pietro Gerra, 1299-1301; 25 Ottobono de' Razzi, 1302-15; 5 sconosciuti, 1251-1315);
- Gorizia, 3 denari (Alberto I, 1271-1304);
- Incisa, 2 grossi tirolini (1305-10);
- Ivrea, 5 grossi tirolini (c. 1300-13);
- Mantova, 3 grossi tirolini (1276-1328, ma conati intorno al 1311);
- Merano, 206 grossi aquilini (Mainardo II, 1258-95; Mainardo II con Alberto II, 1258-71, ma conati nel 1259-74); 920 grossi tirolini (a nome di Mainardo II, conati nel 1274-1306);
- Padova, 2 denari piccoli (ante 1271-1328);
- Trento, 2 grossi (1 anonimo, 1235-55; 1 Eginone d'Appiano);
- Trieste, 5 denari (4 Arlongo de' Visgoni, 1254-80; 1 Rodolfo Pedrazzani da Robecco, 1302-20);
- Venezia, 788 grossi (2 Pietro Ziani, 1205-29; 4 Jacopo Tiepolo, 1229-49; 2 Marino Morosini, 1249-53; 34 Ranieri Zeno, 1253-68; 45 Lorenzo Tiepolo, 1268-75; 70 Jacopo Contarini, 1275-80; 84 Giovanni Dandolo, 1280-89; 510 (per STAHL 2000, p. 448) o 519 (per MEC 12, p. 678) Pietro Gradenigo, 1289-1311; 3 Marino Zorzi, 1311-12; 34 Giovanni Soranzo, 1312-28);
- Verona, 2 grossi tirolini (Cangrande della Scala, 1311);
- Serbia, 10 imitazioni di grossi di tipo veneziano (Stephan Uroš II Milutin, 1282-1311).

Cons.: Un AR fu prelevato dal ripostiglio e donato al Museo di Trieste (BERNARDI 1995, p. 60, citando il cartellino realizzato da Puschi per il Museo).

(SF) Aquileia, scavi 1968-72 per le fognature moderne (dep.: prima metà III sec. d.C.)

Notizia – non confermata – che in un pozzetto presso le mura repubblicane e davanti a casa Jacumin si rinvennero 17 monete databili da Antonino Pio a Massimino il Trace, la maggior parte appartenenti ai primi decenni del III secolo.

Tra il materiale recuperato all'interno del fognolo a est del muro (orientale) vi erano tre sesterzi, illeggibili, della prima o media età imperiale e anche un sesterzio di Alessandro Severo, emesso nel 232. Insieme con le monete nel riempimento della canaletta si rinvennero numerosi frammenti di t.s. chiara A e anche alcuni di chiara C, tra cui segnaliamo uno di forma Hayes 44 (databile dal 220/240 al tardo III secolo), uno di forma Hayes 45 (databile dal 230/240 al 320), 22 di forma Hayes 50 (inv. n. 95.064, databile dal 230/240 al 325 15).

(H) Aquileia, area archeologica / Terzo d'Aquileia, 1969 (dep.: post 1205 (per MEC 12), ante 1213 (per PASSERA, ZUB 2018) o c. 1218 (per STAHL 2000))

Ripostiglio, con 367 AR, forse una parte di un insieme molto più consistente andato disperso. I materiali furono rinvenuti nel 1969 all'interno dell'area archeologica di Aquileia, lungo le mura patriarcali. Le monete erano racchiuse in una sorta di bacello formato da un foglio metallico avvolto su se stesso.

Composizione:

- Aquileia, 316 denari (Wolcherio, 1204-18);
- Trieste, 38 denari (Givardo, 1209-12);
- Venezia, 13 grossi di Venezia (2 Enrico Dandolo, 1192-1205; 11 Pietro Ziani, 1205-29).

Cons.: Aquileia, Museo Archeologico Nazionale. Delle 367 monete, 1 denaro di Aquileia, 1 denaro di

Trieste e 2 grossi di Venezia furono in seguito rubati.

Bibl.: BERNARDI 1975, pp. 188-189; BROZZI 1985, p. 207 n. 15; SACCOCCI 1990; BERNARDI 1995, p. 57; CALLEGHER 1996, pp. 349-350 n. 5; STAHL 1999, p. 265 (cita per la presenza di grossi di Enrico Dandolo); STAHL 2000, p. 441 n. 50 (come *Aquileia, Italy, c. 1218*); MEC 12, p. 683 n. 63 (come *Terzo d'Aquileia*, dep. post 1205); PASSERA, ZUB 2018, pp. 13-14 (come *Terzo di Aquileia*, dep. ante 1213). (H) **Aquileia, area del complesso basilicale**, 11 febbraio 1971 (*dep.:* paulo post 425 (per GORINI 1979) o c. 452 (per BRUSIN 1971))

Ripostiglio con 9 solidi AV:

- 2 di Onorio (395-423), zecca di Ravenna, 408 d.C.;
- 1 di Teodosio II (408-420), 420-421 d.C. (?);
- 1 di Teodosio II (408-420), zecca di Ravenna, 422-423 d.C.;
- 4 di Valentiniano III (424-455), zecca di Roma, c. 425 d.C.;
- 1 di Valentiniano III (424-455), zecca di Ravenna, c. 425 d.C.

Per BRUSIN 1971, p. 114, la data di occultamento potrebbe essere inotnro al 452 d.C., in collegamento con la calata degli Unni in Italia avvenuta in quell'anno. In GORINI 1979, p. 142, si affianca alla indicazione di BRUSIN 1971 la possibilità che l'interramento sia avvenuto poco dopo il 425 d.C., in quanto le monete sono quasi tutte in conservazione fior di conio.

Cons.: Aquileia, Museo Archeologico Nazionale.

Bibl.: BRUSIN 1971; BERTACCHI 1972; GORINI 1979, pp. 140-143 (prima illustrazione dei materiali); FISCHER 2023. Da visita al Museo Archeologico Nazionale di Aquileia del 20/8/2023.

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(SF) Cividale del Friuli, collina di San Mauro, necropoli, 1886 (dep.: VI-VIII secc.)

Necropoli coperta nel 1886, con successivi scavi nel 1994-95, che hanno restituito svariate monete longobarde e bizantine.

- rinvenimento 1886

• *tremissis* AV barbarizzato a nome di Giustiniano I (527-555);

- tomba 2 (guerriero d'alto rango, c. 33-45 anni di età), databile tra la fine del VI e gli inizi del VII sec., scavi 1994

- *solidus* AV barbarizzato a nome di Giustiniano I (538-565);
- mezzo *folles* AE, Giustiniano I, post 536;
- 3 AE tardoromani, autorità non identificata;
- tomba 17 (femminile, c. 17-25 anni di età), databile all'ultimo terzo del VI sec.
 - 2 AE4 tardoantichi, autorità non identificata;
- tomba 27 (bambina di alto rango, c. 7 anni di età), databile all'ultimo terzo del VI sec.
 - *tremissis* AV barbarizzato a nome di Giustiniano I (527-555);
- tomba 34 (infantile, probabilmente maschile, c. 4 anni di età), databile tra la fine del VI e l'inizio del VII sec.
 - antoniniano, autorità incerta, III-IV sec. d.C.
- tomba 41 (cavaliere giovanissimo di rango elevato, presumibilmente di sesso maschile, c. 9 anni di età), databile tra la fine del VI e i primi anni del VII sec.
 - croce in lamina d'oro riccamente decorata, in origine fissata al velo che copriva il volto del defunto;
- tomba 43 (cavaliere adulto armato, c. 17-25 anni di età, sepolto col suo cavallo)
 - 1/4 *siliqua* AR di prototipo bizantino, a nome di Giustiniano I o Giustino II;
- tomba 50 (bambino con offerta di bevande e cibo, sesso non determinabile, c. 2-4 anni di età) databile tra la fine del VI e l'inizio del VII sec., scavi 1995
 - 1/8 *siliqua* AR con *chrismon* a croce, Giustino II (565-578).

V. anche ritrovamento n. 6238: possibile parziale duplicazione dei dati?

Cons.: Cividale del Friuli, Museo Archeologico Nazionale.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: necropolis / cemetery

(SF) Cividale del Friuli, dal territorio, n.s. (dep.: n.s.)

Varie monete dal territorio (anche necropoli) di Cividale del Friuli:

- moneta ostrogota.
 - *tremissis* AV Anastasio/Teodorico (ARSLAN 1989, AV 18);
 - 15 *nummi* AE Roma/Theodahat (ARSLAN 1989, AE 14);
- monete barbarizzate o longobarde:
 - *tremissis* AV Zenone barbarizzato;
 - *tremissis* AV Giustiniano I barbarizzato;
 - *solidus* AV Giustiniano I barbarizzato;
 - 9 frazioni di *siliqua* AR con Croce o *chrismon* barbarizzate;
 - *solidus* AV Focas barbarizzato;
 - due *tremissis* AV Romualdo II/Benevento;
- moneta bizantina:
 - due *solidus* AV Giustiniano I/Costantinopoli;
 - *tremissis* AV Tiberio II/Costantinopoli;
 - ½ *folles* AE Eraclio/Ravenna (602-603; *DOC* II, 2, 132.1);
 - *Hexagramma* AR Eraclio/Costantinopoli (*MIB* 153).

Presso il Museo Archeologico Nazionale di Cividale del Friuli (da visita del 19/8/2023), esposte alcune monete AV date genericamente come provenienti da Cividale del Friuli, forse in parte le stesse già ricordate nell'elenco sopra:

- *solidus* AV, Arcadio (383-387);

- *solidus* AV, Onorio (394-395);
- *solidus* AV, Valentiniano III (438-455);
- *tremis* AV, Artemio (467-472);
- *tremis* AV, Tiberio II (578-582).

Le nove frazioni di *siliqua* AR potrebbero essere le stesse della necropoli di Cella (v. ritrovamento n. 11053).

Cons.: Cividale del Friuli, Museo Archeologico Nazionale (il solido a nome di Foca e i due tremis di Romualdo II li esposti dati come di provenienza sconosciuta).

Nature of the site at the time of concealment or loss: necropolis / cemetery

(uns) Cividale del Friuli, necropoli di Cella – San Giovanni, 1821-22 e 1916 (dep.: n.s.)

Nel 1821 a Cividale del Friuli, in località Cella, fu scoperto un sepolcreto costituito da un centinaio di deposizioni, da cui partì il primo scavo di una necropoli longobarda in Italia. A questi ritrovamenti si aggiunsero quelli portati alla luce nel 1916 presso la vicina area denominata "San Giovanni", dove si scavarono altre 248 tombe.

Il cimitero era stato ricavato all'interno di una più antica zona funeraria, già in uso a partire dall'età romana. La fase longobarda è attestata da sepoltura, databili entro la prima metà del VII secolo, la maggior parte delle quali relative a individui della prima generazione arrivata in Italia.

- scavi 1821 (?)

- collana di 16 *tremis* AV barbarizzato (cfr. sopra: prima e terza collana della Torre sommate?);
- quattro $\frac{1}{4}$ *siliqua* AR *chrismon* barbarizzato;
- $\frac{1}{8}$ *siliqua* AR Croce barbarizzato.

- scavi 1916

- 4 *tremis* AV barbarizzati con appiccagnolo (collana).
- tomba n.s. da San Giovanni (femminile), databile alla metà del VI sec.
 - moneta tardoantica in bronzo, autorità non identificabile;
- tomba 32 da San Giovanni (donna di rango elevato), databile alla metà del VI sec.
 - 2 pendenti da collana in oro costituiti da imitazioni longobarde di *tremis* a nome di Giustiniano I (527-565);
- tomba 105A da San Giovanni (donna di rango elevato), databile alla seconda metà del VI sec.
 - 3 pendenti da collana in oro costituiti da imitazioni longobarde di *tremis*, due a nome di Giustiniano I (527-565) e uno a nome di Giustino I (518-527);
 - fibula a disco in argento dorato con riproduzione a sbalzo di una moneta di Lucilla (189 d.C.).

Per altri materiali dalla necropoli di Cella, v. ritrovamento n. 11053.

Cons.: Cividale del Friuli, Museo Archeologico Nazionale.

(H) Codroipo, fraz. Lonca (Lonca di Rivolto), 1913 (dep.: c. 1410)

Nel corso di lavori di rinnovamento della pavimentazione di uno stabile, vaso di terracotta con 834 AR e 2 AE.

Composizione:

- Aquileia, 765 denari (1 Nicolò di Boemia, 1350-58; 21 Marquardo di Randeck, 1365-81; 40 Giovanni di Moravia, 1387-94; 243 Antonio I Gaetani, 1395-1402; 460 Antonio II Panciera, 1402-11);
- Padova, 3 carrarini e 1 soldo con la figura di sant'Antonio (Francesco II da Carrara, 1390-1405);
- Venezia, 3 mezzanini (Andrea Dandolo, 1343-54), 52 grossi (3 Andrea Contarini, 1368-82; 22 Antonio Venier, 1382-1400; 27 Michele Steno, 1400-13), 10 soldini (5 Antonio Venier; 5 Michele Steno);
- 2 AE veneziani intrusivi dell'inizio del XVII secolo.

Per MEC 12, p. 676 l'occultamento potrebbe essere di poco anteriore al 4 dicembre 1412, quando la città fu saccheggiata dai Veneziani sotto Pandolfo Malatesta.

(SF) Gemona del Friuli, duomo di santa Maria Assunta, ossario, dall'agosto 2008 (dep.: n.s.)

Dalle operazioni di svuotamento del vano a torre che costituiva l'ossario del duomo di Gemona del Friuli, iniziato nell'agosto 2008, sono stati recuperate 56 monete di varie zecche dal XII al XIX secolo, 1 moneta romana del IV-V sec. d.C., 123 medaglie devozionali, oltre a numerosi altri reperti vitrei, ferrosi e ceramici.

La moneta romana è costituita da un bronzo molto corroso di tarda età imperiale, si ritiene finita nell'ossario insieme con la terra prelevata attorno ai defunti. Tra le monete medievali, notato AR (obolo? denaro?) della zecca di Mantova databile entro la prima metà del XIII sec.

Complessivamente sono stati scavati all'incirca 180 metri cubi di materiali, di cui 60 c. di frammenti osteologici umani. I reperti sono emersi dalla setacciatura del materiale terroso.

Data la natura disordinata del deposito, le monete degli strati intermedi non hanno aiutato a fornire datazioni specifiche dei livelli. Negli strati più bassi, invece, la stratigrafia è più definita e indica che la deposizione delle spoglie dovette iniziare intorno alla fine del XII secolo. Da quel momento in avanti, le monete testimoniano l'uso dell'ossario in tutti i periodi successivi fino al XIX secolo.

(H) Ruda, loc. Perteole, chiesa dei santi Andrea e Anna, scavi 1989 (paulo ante 18 marzo 1989) (dep.: c. 1240/50)

Nel corso di scavi archeologici, nell'angolo sud-occidentale della chiesa dei santi Andrea e Anna, a una quota di meno di 40 cm dal pavimento della chiesa, venne ritrovata una brocca in terracotta invetriata di verde (in origine una brocca, monca del manico e dal collo rotto in antico) appoggiata alla risega interna del muro di facciata. All'interno vennero rinvenuti 1.164 AR scodellati:

- Aquileia, 681 denari di Bertoldo di Merano (di Andechs), 1218-51 (414 con l'aquila, 266 con la Vergine);
- Trieste, 480 denari (55 Leonardo, 1231-33; 425 Volrico de Portis, 1233-54);
- 3 denari del duca di Carinzia Bernardo II Spanheim (un esemplare con aquila ad ali spiegate e coda gigliata: BAUMGARTNER 1934, p. 99 n. 5, *CNA* 1, p. 203 n. Cm 6, tav. 60; due esemplari del denaro con santo, BAUMGARTNER 1934, p. 100 n. 6a; *CNA* 1, p. 203 n. Cm 7, tav. 60), zecca di Lubiana.

La prima segnalazione del ritrovamento è in un articolo sul "Messaggero Veneto" del 18 marzo 1989 a firma di Nicola Cossar.

Non è chiaro se si tratti di un vero e proprio ripostiglio, o piuttosto di un deposito votivo.

(H) Tapogliano, 1817 (dep.: post 1402)

Segnalato in BERNARDI 1975 come da Crauglio, ma corretto come da Tapogliano in REBAUDO 2009, che ricostruisce le vicende del ritrovamento.

Apparentemente un ripostiglio di tesaurizzazione, è stato rinvenuto tra la fine di febbraio e l'inizio di marzo 1817 in un terreno a coltura costeggiante la strada per Crauglio, part. 512 del catasto napoleonico (1811), a circa 150 m di distanza dall'abitato medievale. La consistenza accertata è di 2.100 pezzi argentei, di cui quattro identificabili con ragionevole certezza come soldi del patriarca Antonio II Panciera (1402-1411), ma una testimonianza di tale Girolamo de' Moschettini adombra la possibilità che vi fossero presenti anche emissioni di altro tipo.

Cons.: Disperso. Il ritrovamento fu interamente e illegalmente venduto a Udine il 5 marzo 1817, né risulta che alcun pezzo sia stato in seguito recuperato dalle autorità. Il prezzo di vendita risulta essere stato 240 lire del Lombardo-Veneto, pari a 80 fiorini austriaci.

Bibl.: BERNARDI 1975 (come da Crauglio); REBAUDO 2009 (come da Tapogliano).

(oth) Castrocielo, area archeologica delle Terme Centrali di Aquinum, n.s. (*dep.:* III sec. a.C. – V sec. d.C.)

480 monete rinvenute complessivamente nel corso di dieci anni di scavi presso l'area archeologica delle Terme Centrali di Aquinum. La più antica attestazione monetale è data da un sestante fuso della serie cosiddetta della ruota, emesso a Roma tra il 265 e il 242 a.C. La moneta è stata recuperata all'interno dell'ambiente A105, relativo alla prima fase della palestra, completamente rasato a seguito dell'allargamento della stessa intorno alla metà del II secolo d.C. Ad oggi non sembrano diffuse presenze monetali successive al V secolo d.C. Segnalata la presenza di alcuni assi repubblicani spezzati a seguito della riforma augustea.

Di queste monete, 101 piccoli divisionali (99 in lega di rame, 2 in argento di V secolo) sono emerse in gruzzolo da un ambiente a margine della strada, nella parte a N in prossimità del punto in cui la strada lastricata lascia il posto a quella glareata.

(SF) Fregellae, area archeologica, terme, scavi 1997 (dep.: II sec. a.C.)

Nel 1997 negli scavi delle Terme di *Fregellae* è venuto alla luce un denario attribuibile a L. Calpurnio Pisone Frugi, in argento (*RRC* 340/1; 3,78 g, 17 mm, 300°): D/ testa di Apollo a destra, coronato d'alloro e con una pettinatura a corte trecce verticali di tipo arcaico; davanti il simbolo "lucertola"; Al R/ cavaliere al galoppo verso destra, che reca una lunga palma.

La moneta proviene dall'ambiente 25, nella parte posteriore settentrionale dell'edificio termale, dall'US F970A 98, uno strato ricco di tracce di legname al di sotto di un livello di distruzione (US F970A 122) contenente i laterizi del tetto. La US 98 ha restituito una grande quantità di materiale ceramico, che era dunque presente nell'ambiente al momento della sua distruzione, e 13 monete in totale, di cui solo tre illeggibili. Oltre al denario di L. Calpurnio Pisone Frugi, abbiamo una litra *RRC* 17/1d o 17/1e, una semioncia *RRC* 38/7, un semisse di Vibo Valentia (*HN Italy* 2263), una semioncia, un sestante e ¾ di asse databili al 170 a.C. circa, un quadrante *RRC* 272/2, un denario *RRC* 250/1 e un quadrante della serie semionciale.

Le Terme di *Fregellae*, come il resto degli edifici della città, furono distrutte nel 125 a.C. quando le legioni di Roma al comando del console L. Opimio assediaron e conquistarono la colonia latina, che capeggiava la rivolta per ottenere i diritti di cittadinanza. In molti settori di scavo è emerso come la città appaia distrutta in un unico episodio, probabilmente dopo essere stata saccheggiata.

(SF) Minturnae, fiume Garigliano, n.s. (*dep.*: n.s.)

Compressivamente, 2.665 monete recuperate a seguito di un sequestro dalle Autorità e provenienti da attività clandestine effettuate nel letto del fiume Garigliano. Si tratta di monete greche, repubblicane, imperiali, medievali e moderne fino a un "grano" di Carlo II del 1681. La concentrazione più significativa va dalla metà del III sec. a.C. al V sec. d.C. e corrisponde alla vita e alle attività commerciali della vicina colonia romana di *Minturnae*.

Notate:

- moneta barbarica (Vandali/Ostrogoti)
 - 1 *nummus* AE Odoacre (?);
 - 8 AE4 con croce in ghirlanda;
 - 2 *minimi* AE vandali (?) con Vittoria (per MORELLO 2002, 3 AE Vandali; per GIOVE 1998, 1 "moneta vandalica...per Giustiniano I, n. 1998");
 - 3 *nummi* AE Atalarico (ARSLAN 1989, AE 20);
 - *nummi* AE Teodorico e Baduela (MUNZI 1996);

- moneta bizantina
 - 1 *minimus* AE Anastasio/Monogramma;
 - 1 *pentanoummion* AE Giustiniano I/Roma;
 - 1 *nummus* AE Giustiniano I/Ravenna (540-547; *MIB* 240);
 - 1 *pentanoummion* AE Giustino II/Roma;
- moneta tardo-medievale
 - 1 denaro gherardino di Carlo II d'Angiò, zecca di Napoli (METCALF 1974, p. 49);
 - 1 gigliato di Roberto d'Angiò (FRIER, PARKER 1970, p. 106);
- moneta moderna
 - 1 grano 1681 di Carlo II di Spagna.

(H) Albano Laziale, catacombe di san Senatore, scavi 1989-91 (dep.: III-VI sec.)

Durante gli scavi archeologici effettuati nella catacomba di san Senatore ad Albano Laziale tra 1989 e 1991, all'interno di alcune sepolture intatte furono rinvenuti tre grandi nuclei di monete in bronzo, databili tra III-IV e VI secolo d.C. In una sepoltura è stato rinvenuto un nucleo di 235 monete; in un'altra un gruzzolo di 97 pezzi; e in una terza erano contenuti due gruzzoli di 224 e di 111 nominali, distinti stratigraficamente, ma pertinenti allo stesso inumato.

Dettagli:

- tomba 103: ripostiglio con 97 AE da Costanzo II a *pentanoummion* AE Giustino II/Roma (con V), con 5 AE Ricimero, 10 *decanoummion* AE Ravenna/Monogramma (ARSLAN 1989, AE 11),

- 1 AE Atalarico (tipo ?), 1 2 ½ *nummi* AE Theodahat (ARSLAN 1989, AE 21), 8 AE Vandali Thrasamund/Cartagine, 6 AE barbarizzati;
- tomba 104: ripostiglio con 224 AE, da Massimiano a VI sec., e ripostiglio con 111 AE, da Valentiniano alla metà del VI sec., con 3 *nummi* AE Baduela/leone (ARSLAN 1989, AE 25), *decanoummion* AE Ravenna/Monogramma (ARSLAN 1989, AE 11), ecc.
 - tomba 105: ripostiglio con 235 AE, da Costantino alla metà del VI sec., con 8 *folles* AE Giustiniano I; 6 AE Ricimero; 3 AE Odoacre; AE Atalarico (tipo ?); 3 *nummi* AE Baduela/Leone (ARSLAN 1989, AE 25); AE con croce in ghirlanda.
 - tomba n.n.: 2 *tremisses* AV Giustiniano I/Ravenna (a conio largo).

Si tratta di ritrovamenti controversi: si potrebbe ipotizzare una sorta di pratica connessa al rito della sepoltura. Tuttavia non si può escludere a priori che i gruzzoli possano essere stati occultati nelle cavità tombali con l'intenzione di recuperarli in un secondo momento, e che dunque si sia in presenza di vere e proprie forme di tesaurizzazione.

Bibl.: MARTORELLI 1992, pp. 70-97: Circa 1000 monete, con gruzzoli nelle tombe 103-105. Monete nella malta di chiusura di tombe. Tondelli non conati (? da verificare); P. CHIARUCCI, T. GIZZI, *Guida al Museo Civico Albano*, 1996, p. 101 (foto dei *tremisses* AV, associati a *solidus* AV di Costantino I); ARSLAN 1998, p. 305, nota 45; ARSLAN 2004i, n. 2820 (come *Albano, catacomba di San Senatore*; [ARSLAN 2006], p. 375; PANCOTTI 2017, p. 75 n. 12.

(H) Albano Laziale, loc. La Villetta, via Vascarelle, scavi 2001 (dep.: c. 76-74 a.C.)

Durante alcuni sondaggi archeologici, venne intercettata la *pars rustica* di una villa di età romana repubblicana. Le strutture, indagate dal 2001, comprendevano vari impianti di lavorazione, abbandonati già dalla prima metà del I secolo a.C. In un secondo momento, nel corso della media età imperiale, il sito subì una seconda fase di frequentazione, stavolta per scopi funerari: una necropoli di 68 tombe (a fossa e con copertura di tegole e coppi detta 'alla cappuccina') si impostò sulle fasi di crollo delle strutture preesistenti. Nello strato di crollo di un ambiente rivestito in cocciopesto, identificato come *torcularium* per la lavorazione dell'uva, prima che sulla struttura si impostasse la necropoli di età imperiale, fu occultata un'olla di argilla tornita rosso-bruna contenente 145 denari e 7 quinari d'argento databili tra la fine del III secolo e il 76-74 a.C.

L'olla venne utilizzata già rotta: *al momento della scoperta si presentava mancante dell'orlo mentre frammenti di pareti giacevano al suo interno, al di sotto dei reperti numismatici*. Rinvenuti in prossimità del contenitore stesso e forse posti a copertura (o segnacolo) del ripostiglio, erano uno spezzone di tegola e frammenti di un bicchiere in ceramica a pareti sottili di forma allungata.

(oth) **Ardea, lungo la costa marittima di Tor San Lorenzo**, tra fine degli anni '60 e l'inizio degli anni '70 del XX secolo (*dep.:* metà VI sec.)

Nucleo di "minimi" di circa 700 pezzi rinvenuti nella località marittima di Tor San Lorenzo, Ardea. Queste monete, pur ritrovate disseminate in un'ampia area costiera, sono molto probabilmente riconducibili ad un unico tesoretto (alcune monete sono state rinvenute in agglomerati di 20-30 esemplari), occultato intorno alla metà del VI secolo. I nummi più recenti risalgono, infatti, al regno di Baduila.

Il materiale è composto per più di un terzo (circa il 37 %) da monete di Baduila, emesse a Roma e Ticino. Vi sono anche esemplari di nummi tardo-romani (del IV-V secolo), vandali e protovandali (di V-VI secolo). Notati anche esempi di AE2 di metà IV secolo e di antoniniani in bronzo, tutti frammentati, e una litra romana repubblicana databile al 235 a.C. Tutte queste monete, intere e frazionate, hanno in comune il peso, che si aggira attorno al grammo, pressappoco il peso dei 2,5 nummi emessi nel regno ostrogoto, il che giustifica la loro presenza accanto alle monete minime gote.

Cons.: Roma, Museo dell'Alto Medioevo.

(H) **Ariccia, proprietà Chigi**, 1885 (*dep.:* inizio XI sec.)

Nel 1885 ad Ariccia, *e precisamente nella zona degli orti adacquativi attraversati dall'Appia, a sinistra di chi discende dal gioco della Stella, in terreno di proprietà del sig. principe Chigi*, venne rinvenuto un orciuolo, con la superficie esteriore maiolicata, contenente oltre a duecento monetine d'argento di conio anglo-sassone (FIORELLI 1885).

L'anno successivo questa prima notizia venne riesaminata e approfondita da Felice Bernabei, il quale identificò le 213 monete rinvenute, riuscendo a datare la chiusura del ripostiglio verso i primi anni dell'XI secolo.

Composizione:

- 1 penny AR Aethelred/Etelredo II d'Inghilterra, detto lo Sconsigliato (978-1016), zecca di a Buckingham;
- 1 denaro AR coniato a Limoges tra il X e l'XI secolo;
- 205 denari AR ottoniani conati Ottone I il Grande (936-973) e Ottone III di Sassonia (996-1002), zecca di Pavia;
- 2 denari AR Arduino d'Ivrea (1002-1014), zecca di Pavia.

(H) **Ariccia, via Cupetta**, metà XIX sec. (*dep.:* n.s.)

Verso la metà del XIX secolo ad Ariccia, nell'allargare via Cupetta, in un terreno di proprietà Chigi affacciante sulla stessa strada, venne portato alla luce un ripostiglio di monete fuse in bronzo: *si tagliò il greppo sulla costa del monticello ed ivi fra la terra sottostante alla falda del peperino era ammonticchiato il tesoro monetale, composto di parecchi quadrilateri, molti semissi, qualche quadrante e molto aes rude.*

Nel 1848 Giuseppe Marchi acquistò parte del ripostiglio per il Museo Kircheriano. Da una lista compilata da Francesco Tongiorgi e comunicata a Michele Stefano De Rossi, avrebbe in origine dovuto contenere:

- 39 frammenti di bronzo grezzo (cd. *aes rude*);
- lingotto del tipo ramo secco (o lisca di pesce) / due delfini;
- frammento di lingotto del tipo viticci o *cornuacopiae* (?) / ramo;
- 2 lingotti del tipo scudo ovale (esterno) / scudo ovale (interno);
- 1 frammento di lingotto del tipo spada / fodero;
- 8 emissioni (del tipo cd. *aes grave*) appartenenti alla serie detta Giano / Mercurio;
- 1 semisse fuso del tipo testa di toro a destra / S e prua con acrostolio a destra.

(SF) Artena, Colle Castagna, 1982-83 (dep.: IV-VI sec.)

Nel 1982, durante una ricognizione effettuata dal Gruppo Archeologico di Artena presso le pendici Sud-orientali di Colle Castagna, proprio sul confine tra il territorio comunale di Lariano e quello di Artena, vennero segnalati alcuni lavori agricoli che sconvolsero resti edilizi pertinenti a una *villa rustica* e che portarono alla luce una grande quantità di materiale archeologico. In quell'occasione venne scoperto in superficie un gruppo di 18 monete in bronzo, insieme ad un anellino d'oro e ad un piccolo manico in bronzo. L'anno successivo dal medesimo sito venne recuperato un solido AV bizantino.

Il nucleo dei materiali si compone di vari piccoli bronzi databili tra IV e VI secolo d.C.. Il pessimo stato di conservazione degli esemplari li rende difficilmente identificabili, a parte un piccolo nominale di Costanzo II Cesare (coniato a Roma nel 337 d.C.) e un pentanummo non ulteriormente determinabile.

Cons.: Artena, Museo Civico Archeologico "R. Lambrechts".

(H) Castel Gandolfo, lago Albano, 1999 (dep.: V sec. d.C.)

Nel 1999 sulle rive del lago Albano, nell'ambito dei lavori per il Giubileo del 2000, vennero indagate alcune strutture di epoca romana, caratterizzate da fasi edilizie comprese tra l'età repubblicana e il VII secolo d.C. Annesse a queste vi erano i resti di una necropoli tardoantica.

Durante lo scavo dell'area venne rinvenuto *un mortaio di peperino scalpellato, su alto piede parallelepipedo, accanto al quale giacevano interrato due brocche; all'interno di una delle due sono stati rinvenuti tre pentanummi di Giustiniano I.*

(SF) Colleferro, castello di Piombinara, scavi 2004-13 (*dep.*: III sec. a.C. – XV sec.)

Gli scavi nell'area del castello hanno messo in luce 24 monete, alcune delle quali in tomba. Le più antiche, databili all'età romana repubblicana, sono da mettere in relazione alla presenza di un piccolo insediamento, già individuato dal rinvenimento di frammenti ceramici. Per i successivi dodici secoli non sono al momento noti ritrovamenti monetali. Dopo questa lunga cesura, a partire dal XIII secolo, l'attestazione di moneta sia in mistura che in argento, emessa prevalentemente dalla zecca di Roma – ma sono attestati esemplari di diverse zecche dell'Italia centrale – si manifesta con numeri più rappresentativi. Il maggior afflusso di moneta coincide con l'acme del popolamento del *castrum*, per interrompersi con la sua distruzione.

Composizione:

- asse unciale, post 211 a.C., zecca di Roma;
- quinario, 88 a.C., Cneo Lentulo, zecca di Roma;
- denaro, Repubblica di Siena, c. 1180 – c. prima metà XIII secolo, zecca di Siena;
- 10 cinque, Senato Romano, c. 1285 – c. 1350, zecca di Roma;
- 2 piccioli, Senato Romano, c. 1285 – c. 1350, zecca di Roma;
- denaro gherardino, 1299-1309 (?), zecca di Napoli;
- grosso, Arcivescovi di Ravenna, XIII-XIV secolo, zecca di Ravenna;
- denaro provisino, Senato Romano, c. 1300-1404, zecca di Roma;
- bolognino romano, Gregorio XI o anonima pontificia attribuita a Gregorio XI, 1377-78, zecca di Roma;
- bolognino romano, Bonifacio IX, c. 1389-1404, zecca di Roma;
- 4 monete MI/AE di zecche indeterminate (tra cui forse un denaro della zecca di Ancona?).

(H) Colleferro, loc. Colle Cisterna, marzo 2003 (*dep.*: metà VI sec.)

In occasione di alcuni saggi preventivi effettuati nel mese di marzo 2003 dalla Soprintendenza per i Beni Archeologici del Lazio in località Colle Cisterna, nel territorio comunale di Colleferro (Roma), furono intercettati un articolato sistema di captazione delle acque ed una cisterna in opera cementizia. Nel rimuovere il riempimento di quest'ultima, costituito da uno scarico composto da "blocchi e scapoli di tufo e calcare, frammenti di malta, di intonaco, di marmo, *cubilia* in calcare e in tufo, materiale fittile, notevole quantità di ceramica, resti di un *torcular* e di una macina, vetro, una brocca in bronzo", si rinvennero anche 143 monete suddivise in due nuclei distinti e 3 esemplari erratici, attualmente conservati presso la sede del Museo Comunale di Colleferro. I depositi sono costituiti da 71 e 72 pezzi bronzei di minimo modulo, che si distribuiscono fra la seconda metà del IV e la metà del VI secolo. I due accumuli mostrano un peso complessivo pressappoco equivalente – g. 58,97 il primo e g. 64,29 il secondo – così come assai simile è la distribuzione cronologica dei componenti ed il loro grado di leggibilità. Le tre monete individuate fra la terra del riempimento della cisterna sono ascrivibili approssimativamente al medesimo arco cronologico.

Cons.: Colleferro, Museo Comunale.

(H) Genzano di Roma, fosso di San Gennaro, n.s. (ante 1885) (dep.: n.s.)

Prima del 1885 due semissi fusi databili nell'ambito del III secolo a.C. *furono veduti saltare in aria allo scoppio di una mina accesa in una cava di peperino*, durante i lavori di realizzazione della ferrovia tra Genzano e Lanuvio. In realtà la notizia – riportata dal Garrucci – rappresenta la sintesi di due distinti ritrovamenti, avvenuti a distanza ravvicinata nel tempo nel territorio di Genzano di Roma. Michele Stefano De Rossi, nel corso delle sue ricerche volte a dimostrare l'attività eruttiva del vulcano Albano in tempi storici, registrò il ritrovamento di un solo semisse fuso (della tipologia RRC 14/2), avvenuto nel 1860 all'altezza del fosso di San Gennaro e riferitogli dallo stesso Garrucci. La moneta *Fu rinvenuta entro un masso di peperino, che fu spezzato dopo essere stato staccato dalla massa della roccia*. All'acquisto del semisse *compreso nel peperino*, di proprietà di Vincenzo Cartacci, era interessato il duca de Blacas d'Aulps. Cartacci raccontò in seguito a De Rossi di essere in possesso di un ulteriore esemplare caratterizzato dalle stesse concrezioni (di tipologia non altrimenti specificata), acquistato da alcuni cercatori dopo il 1846: *Nell'acquistare le predette monete romane ne rinvenni una, della quale non conobbi la provenienza, e che era compresa nel peperino [...] osservai che il peperino addossato alla moneta era assai duro, e nell'apparenza della sua composizione mi sembrava precisamente quello che si è estratto per le costruzioni della strada ferrata in seguito nel fosso di S. Gennaro*.

(H) Grottaferrata, loc. Pratone, tenuta Belvedere-Molara, aprile 1951 (dep.: n.s.)

Nell'aprile del 1951 a Grottaferrata, durante alcuni lavori agricoli che si tenevano all'interno della tenuta Belvedere-Molara presso la località Pratone, venne rinvenuto un piccolo contenitore in piombo di forma

ovale che *sembrava una bomba a mano*. All'interno vi erano 40 denari d'argento ottoniani conati a Pavia tra la fine del X e gli inizi dell'XII secolo.

Composizione (da ARSLAN 2004i):

- 8 denari AR Ottone I, zecca di Pavia;
- 2 denari AR Ottone I e II, zecca di Pavia;
- 12 denari AR Ottone III, zecca di Pavia;
- 16 denari AR Enrico II, zecca di Pavia;
- 2 denari AR Enrico III, zecca di Pavia.

In SACCOCCI 2001-02 indicazioni diverse in merito alla classificazione dei denari ottoniani:

- denari AR Ottone I e II, zecca di Pavia, legenda *ottopivsrex*, 962-967;
- denari AR Ottone II imperatore, zecca di Pavia, legenda *avgvstvs*, 973-983;
- denari AR Ottone III, zecca di Pavia, 996-1002.

Inizialmente lo scopritore consegnò 10 denari presso il commissariato di Polizia di Frascati, che le affidò al principe Clemente Aldobrandini, proprietario del terreno. Le restanti 30 monete furono recuperate nel giugno dello stesso anno dalla Soprintendenza.

(H) Grottaferrata, valle della Molar, poco al di sopra del castello, marzo 1902 (*dep.*: post 1253)

Nel marzo del 1902, nella vallata localizzata tra Rocca Priora e le alture tuscolane, *poco al di sopra del pressoché ormai scomparso Castello della Molar*, venne rinvenuto un gruzzolo contenente un numero imprecisato di grossi d'argento battuti a Roma dal senatore Brancalone degli Andalò (1252-1258), insieme a diversi grossi conati a Venezia da Ranier Zen (1253-1268).

Felice Grossi Gondi propose di attribuire la proprietà del gruzzolo a un personaggio della corte o dell'esercito di papa Innocenzo IV che sul finire dell'estate del 1254, nel corso del suo viaggio verso Anagni per incontrare una delegazione inviata da Manfredi di Sicilia, alloggiò proprio presso il Castello della Molar.

(H) Lariano, 1736 (*dep.*: III sec. d.C. (?))

Nel 1736 F. De Ficoroni acquistò *alcune monete d'argento di Caracalla, ritrovate nella più alta Selva montuosa, detta l'Ariano, territorio di Velletri*.

Per ALTAMURA 2021, p. 101, il fatto che il ritrovamento consistesse in più nominali dello stesso imperatore conati in un metallo nobile (denari o antoniniani), potrebbe suggerire che in origine le monete appartenessero ad un

singolo gruzzolo o tesoretto occultato agli inizi del III sec. d.C.

(SF) Lariano, dal territorio, vari ritrovamenti, n.s. (dep.: VI sec. a.C. – XX sec.)

Dal territorio di Lariano, vari ritrovamenti (non sempre documentati con accuratezza). Segnalati:

- frammenti di bronzo con valore premonetale (*aes rude*, databili al VI-III sec. a.C.).
 - 10 frammenti di barre o lingotti doppio rettilinei;
 - 6 frammenti informi;
- emissioni di epoca romana repubblicana e imperiale
 - *aes grave* in bronzo da Colle della Fragola, sestante (47,4 gr.) della serie fusa Apollo/Apollo del 270 a.C., con teste dei Dioscuri e due globetti;
 - monetazione romano-campana in bronzo, mezza litra (1,1 gr.) del 234-231 a.C. con Roma elmata e cane al rovescio, da Colle della Carmignana (?);
 - monetazione romano-campana in bronzo, litra (1,1 gr.) del 230-226 a.C. con tracce di testa e cavallo al galoppo, da Colle della Carmignana (?);
 - assi in bronzo (13,3; 7,5 gr.) del II-I sec. a.C. con giano bifronte e prora di nave;
 - denario di C. Terentius Lucanus in argento (3 gr.) del 147 a.C., con testa di Roma e i Dioscuri a cavallo, forse da Colle della Fragola;
 - quinario in argento (2 gr.) di M. Porcius Cato dell'89 a.C. con testa di Libero e Vittoria seduta, dalla parte meridionale di Colle dell'Acero;
 - monete in bronzo illeggibili (1,5; 1,9 gr.) di ambito magno greco o romano repubblicano dal territorio e forse dal Colle della Fragola;
 - assi in bronzo (12; 6,8 gr.) di epoca romana di incerta datazione, dal Colle della Fragola (?);
 - asse in bronzo (8,4 gr.) di Tito da Cesare (69-79 d.C.) con l'Aequitas al rovescio, forse dal Colle della Fragola;
 - denario in argento (3,1 gr.) di Domiziano da Cesare del 79 d.C., con la lupa e i gemelli al rovescio, forse dal Colle della Fragola;
 - sesterzio in bronzo (16,7 gr.) di Crispina Augusta, moglie di Commodus (180-192 d.C.) con al rovescio la Pudicitia seduta, da Colle Mozzo;
 - sesterzio in bronzo (16,9 gr.) di Alessandro Severo (222-235 d.C.) con al rovescio la Providentia seduta, da Pescara/Fontana S. Antonio;
 - frazione in bronzo (2 gr.) di Costanzo I da Cesare del 297-298 d.C. con al rovescio VOT XX in ghirlanda, da I Colli/Pantanaccio;
 - moneta in bronzo di epoca tardo-imperiale (0,6 gr.) e forse di epoca bizantina (2,8 gr.) probabilmente dal Colle della Fragola;
- emissioni di età moderna
 - 2 es. da un quattrino in rame della Stato Pontificio, emesse da Clemente XII (1740-1740) nella zecca di Gubbio;
 - esemplare illeggibile del XVII-XVIII sec. dal territorio;
 - da 9 Cavalli del 1789 emessa da Ferdinando IV (1759-1816) del Regno di Napoli, dalla località Macere/Ontanese;
 - mezzo baiocco in rame emesso a Roma da Pio IX (1846-1878) nel 1851 dalla località Macere/Ontanese;
 - monete da 5 centesimi del Regno d'Italia emesse da Vittorio Emanuele II (1861-1878) a Napoli e in altre zecche illeggibili tra il 1861-1867, da Colle della Noce (1 es.) e dal territorio (2 es., tra cui quella da Napoli);
 - da 10 centesimi "ape" del 1920 del Regno d'Italia emesse da Vittorio Emanuele III (1900-1943);
 - da 5 centesimi "spiga" del 1920 del Regno d'Italia emesse da Vittorio Emanuele III

- (1900-1943);
- medaglie devozionali
 - medaglia devozionale del XVII sec. con l'Immacolata Concezione e un ostensorio con due Angeli oranti in ginocchio, da La Cerreta.

Materiali in larga parte raccolti dal Gruppo Archeologico di Lariano.

Bibl.: ALTAMURA, SCIFONI 2021, pp. 55-56, 70 (illustrazione dei materiali); ALTAMURA 2020, n. 214 (la moneta da 5 centesimi di Vittorio Emanuele II di Savoia, data come da Colle dell'Acero); ALTAMURA 2021, pp. 101-102.

Discovery of the find: fortuitous discovery, agricultural work / gardening

(uns) Marino, dal territorio (?), n.s. (dep.: II sec. a.C.)

La raccolta numismatica Maruffi, conservata a Marino presso l'omonima villa in località Sassone, comprende un gruppo di denari repubblicani i quali, per omogeneità di patina e *range* cronologico, potrebbero appartenere a più ripostigli.

In particolare, si è fatto riferimento ad un gruppo di 7 emissioni databili secondo la cronologia del Crawford tra 138 e 131 a.C.

L'ipotesi di una provenienza dei materiali da ritrovamenti avvenuti sul territorio non è oggettivamente dimostrabile. La maggioranza delle monete d'argento appartenenti alla collezione, formatasi a partire dagli inizi del XX secolo, presenta una tipica patina scura abbastanza omogenea dovuta all'analoga condizione di conservazione dei diversi esemplari, la stessa che in gergo antiquario viene comunemente definita "patina di medagliere".

Cons.: Mraino, loc. Sassone, villa Maruffi.

(SF) Marino, loc. Cave – Acqua Santa, 2011-12 (dep.: secc. I-XX)

Tra il 2011 e i primi mesi del 2012, nei pressi del centro storico di Marino è stata individuata un'area di 'butto' (immondezzaio) di epoca storica. La superficie interessata dai rinvenimenti è localizzata sul costone meridionale del centro abitato di Marino (RM), in località Cave – Acqua Santa, nel settore nord-occidentale dei Colli Albani. La scoperta si deve a un vasto incendio, avvenuto nel 2011, che ha ripulito il costone dalla vegetazione e ha consentito una visibilità ottimale del suolo.

Sono state recuperate numerose monete, medaglie e oggetti devozionali sulla superficie dell'area di 'butto'. Gli esemplari più antichi risalgono all'impero romano: si tratta di un quadrante di Claudio (42-54 d.C.), raffigurante al dritto un modio, e un piccolo esemplare molto rovinato forse attribuibile al tardo impero (IV-V sec. d.C.).

Tre esemplari sono stati conati in periodo medievale: un denaro provisino in mistura, probabilmente emesso dal Senato Romano nel XIII-XIV sec. e due piccioli di Sisto IV della Rovere (1471-1484). Tre monete, poco leggibili, sono probabilmente emissioni del XVII-XVIII sec. La prima reca al dritto tracce di un ritratto, mentre al rovescio si intravede un giglio: probabilmente si tratta di una moneta francese. Allo stesso periodo risalgono anche due monete dello Stato pontificio: un quattrino di Gubbio emesso da Innocenzo XI nel 1679, ben conservato, e un quattrino di Bologna con leone rampante al dritto e legenda *BONONIA DOCET* al rovescio.

Per il XIX sec. sono attestate ancora monete pontificie e un esemplare della monetazione postunitaria del Regno d'Italia. Tra le prime si hanno un quattrino di Gregorio XVI (1831-1846), coniato a Roma nel 1844, e un mezzo baiocco di Pio IX (1846-1870) del 1850; il secondo è una moneta da 5 centesimi fatta coniare da Vittorio Emanuele II di Savoia (1861-1878) a Milano nel 1861. Ad una fase più avanzata del Regno d'Italia appartengono altre tre monete al nome di Vittorio Emanuele III di Savoia (1900-1943): 20 centesimi del 1940 in acmonital, 5 centesimi del 1941 in bronzital, entrambe della serie monetale 'impero', e 1 centesimo in rame del 1904. Altre monete più recenti appartengono infine alle emissioni della Repubblica italiana.

Per ulteriori ritrovamenti sporadici dalla zona, v. ritrovamento n. 10776.

Bibl.: ALTAMURA, RASCAGLIA 2019 (illustrazione dei materiali, ma fotografie poco leggibili).

(H) Marino, loc. Montecrescenzo, scavi 2008 (dep.: XI sec.)

Nel corso di un'attività di sorveglianza archeologica preventiva a lavori di scavo effettuati per conto del Comune di Marino per la posa della condotta fognante nell'area di Montecrescenzo, nell'anno 2008 è stato intercettato un complesso di strutture di epoca romana, già gravemente compromesse dal passaggio di altre utenze moderne.

Il rinvenimento di una sepoltura medievale ad inumazione in fossa terragna, scoperta al di sopra dello strato di riempimento/abbandono più superficiale di uno degli ambienti romani, costituisce

un *terminus ante quem* per la frequentazione funzionale del sito e conferma come questo e le strutture circostanti fossero comunque in disuso al momento della deposizione. Può comunque essere messa agevolmente in relazione con la presenza di una chiesa dedicata a sant'Angelo, la cui attività è attestata dalle fonti ecclesiastiche almeno fino al X sec. La fossa è stata rinvenuta a soli 30 cm sotto il piano stradale attuale e per questo la sua integrità è stata parzialmente compromessa dalla posa di condutture moderne. Al momento della scoperta appariva priva di copertura o segnacoli, e conteneva un individuo adulto in posizione supina, con il cranio rivolto verso Est, gli arti superiori flessi posizionati sul petto e sul bacino, e quelli inferiori distesi e ravvicinati.

Posto presso la rotula destra è stato rinvenuto un gruzzolo di 15 monete, alcune delle quali ancora impilate ed unite da concrezioni ed ossidazioni metalliche. Il gruppo è composto da quattordici denari ed un obolo, tutti leggibili ed in buono stato di conservazione, conati in mistura d'argento. Le monete sono tutte riconducibili al primo periodo feudale della Francia capetingia (X-XI sec.). Si tratta di emissioni di zecche di potentati locali. Sette monete appartengono a quattro zecche circoscritte in regioni limitrofe della Francia centro-occidentale, cinque appartengono alle emissioni del Ducato di Normandia e sono caratterizzate da un'iconografia corrotta del tipo del "denaro del tempio", e le ultime tre – le più antiche – provengono dalle officine della città di Tolosa nella Francia meridionale e fanno parte della prima monetazione indipendente della città, probabilmente sotto l'autorità vescovile ma a nome del re Carlo il Semplice (896-923 d.C.).

È stato pertanto ipotizzato che il defunto fosse un viaggiatore francese, seppellito accidentalmente con il piccolo gruzzolo di denaro di scorta, presumibilmente nascosto tra le cuciture delle vesti.

Discovery of the find: discovery during archaeological investigations

(uns) Marino, tra la via Appia e le pendici occidentali di Montecrescenzo (cd. Pascolare di Castel Gandolfo), 1817 (dep.: n.s.)

Nel 1819 il duca de Luynes vide a Genzano, presso il signor Giuseppe Carnevali, un lingotto bronzeo integro (cd. *aes signatum*) del tipo ancora / tripode. L'anno successivo l'esemplare venne acquistato dal duca de Blacas d'Aulps, che lo indicò proveniente *auprès de Castel-Galdolfo*. Il Garrucci lo volle trovato proprio *presso il casino di campagna del duca di Blacas d'Aulps*, tuttavia Michele Stefano De Rossi, sulla scorta delle ricerche e degli scavi condotti dal Carnevali nel 1817, ipotizzò che potesse provenire dal cosiddetto Pascolare di Castel Gandolfo, ossia l'area compresa tra la via Appia e le pendici occidentali di Montecrescenzo (attuale territorio comunale di Marino).

(SiF) Monte Porzio Catone, loc. Le Cappellette, villa detta di Matidia Augusta, scavi 1994-2004 (dep.: n.s.)

Le indagini archeologiche condotte tra il 1994 e il 2004 dalla Soprintendenza per i Beni Archeologici del Lazio, dall'Università di Roma "Tor Vergata" e dal Gruppo Archeologico Latino presso la villa detta di Matidia Augusta a Monte Porzio Catone (località Le Cappellette), hanno portato alla luce un ampio peristilio con annesse varie strutture tra cui un impianto termale. All'interno dell'area del giardino, caratterizzata da strutture di riutilizzo risalenti all'età tardoantica e altomedievale, sono state evidenziate cinque piccole vasche quadrangolari rivestite internamente di cocciopesto, probabilmente utilizzate in origine per alloggiare piante. *Tra il materiale di riempimento di una di esse è stato rinvenuto un nucleo di sei monete di bronzo, di conio orientale, databili tra l'età repubblicana e il VI secolo d.C..*

Due anni dopo questa breve comunicazione le monete furono presentate in un poster scientifico a Frascati, nel corso di una mostra sulle collezioni italiane di oggetti d'arte orientale. Le due fotografie pubblicate sul catalogo realizzato per l'occasione, mostrano una coppia di monete indiane: un *hexachalkon* in bronzo indo-scita (tipologia ascrivibile ad Azes I-II63), coniato nell'area dell'attuale Pakistan tra la fine del I secolo a.C. e i primi anni del I secolo d.C.; e una "dracma" in rame eftalita, coniata nell'attuale area compresa tra Kashmir e Pakistan nel VI secolo d.C. (tipologia di Toramana I-II64).

A. Pancotti, da esame diretto dei materiali, vi riconosce 4 bronzi della tipologia Azes e 2 della tipologia Toramana.

Discovery of the find: discovery during archaeological investigations

(H) Monte Porzio Catone, loc. Pallotta, inizio febbraio 1953 (dep.: c. ultimo decennio I sec. a.C.)

Nei primi giorni di febbraio del 1953 a Monte Porzio Catone, presso la località Pallotta, durante lavori di allargamento della strada provinciale Frascati-Colonna, alcuni operai nel rimuovere una gibbosità del terreno scoprirono un vaso in terracotta che andò in frantumi *sotto il colpo del*

piccone dell'operaio Angelo Cerroni [...] e le numerosissime monete di argento o di una lega di argento scrosciavano sotto gli occhi degli operai disperdendosi sul terreno. Tutti allora si buttavano sull'inatteso tesoro. Una denuncia del fatto [...] consigliava gli operai a consegnare le monete. Sul tavolo dell'ufficio del maresciallo si sono ammucciate così 1.064 pezzi del peso complessivo di kg. 4,400.

Tale ritrovamento, presumibilmente incompleto date le incerte condizioni del recupero, si compone in realtà di un nucleo di 1.069 denari d'argento databili tra gli ultimi anni del III secolo e l'ultimo decennio del I secolo a.C.

La moderna strada provinciale Frascati-Colonna, all'altezza del fortuito ritrovamento, taglia l'areale di un'estesa villa d'*otium*, edificata su di un vasto terrazzamento artificiale di forma quadrangolare. Le strutture superstiti sono caratterizzate da fasi edilizie che coprono un arco cronologico compreso tra il II secolo a.C. e il II secolo d.C.

(SF) **Ostia antica, cd. Caseggiato delle due scale**, n.s. (*dep.:* IV-V sec. d.C.)

Nell'ambito delle ricerche del Progetto Ostia Marina, missione archeologica dell'Università di Bologna nel quartiere fuori porta Marina di Ostia antica, è stato individuato il cd. "Caseggiato delle due scale" con botteghe al pianterreno costruito nel II sec. d.C. Esso ebbe importanti trasformazioni alla fine del IV sec. d.C., quando vi fu costruito un *balneum* e nelle botteghe si installarono attività artigianali.

La struttura era caratterizzata da un asse centrale con orientamento est-ovest (amb. 8) con due ingressi e due vani scale che conducevano ai piani superiori. Nella parte a nord-est dell'ambiente 8 erano due ambienti quadrangolari (amb. 1 e 2) e un grande vano quadrato aperto su via della Marciana, forse destinato a ospitare una *caupona* o una *popina*. Nella parte meridionale erano pertinenti alla prima fase l'ambiente 9, con caratteristiche simili a quelle dell'ambiente 1, e un altro grande ambiente quadrangolare che affacciava su via della Marciana, verosimilmente una *taberna*. L'edificio fu sottoposto a importanti ristrutturazioni in epoca severiana, quando il grande ambiente quadrangolare affacciato su via della Marciana venne suddiviso in due botteghe da tramezzi in opera laterizia (amb. 3 e 4).

Considerando solo le unità stratigrafiche pertinenti alle fasi tardoantiche, nelle indagini effettuate negli ambienti 1, 2, 3 e 4 sono state rinvenute in totale 1.063 monete. Si tratta nella grande maggioranza dei casi di emissioni classificabili tra gli AE2, AE3 e AE4, note anche come *nummi*, attribuibili a un arco cronologico che va dalla prima metà del IV all'inizio del V sec. d.C., con i termini cronologici costituiti dai regni di Costante (337-350), Costanzo II (337-361) e di Valentiniano III (425-455).

Sulla base dell'esame della distribuzione stratigrafica e spaziale delle monete sono evidenziabili zone di concentrazione maggiore, corrispondenti alle USS 1027 e 1081 per l'ambiente 1 (66 e 121 unità), alle USS 2015 e 2029 per l'ambiente 2 (57 e 128 unità), all'US 36030 per l'ambiente 3 (47 unità) e all'US 3026 per l'ambiente 4 (230 unità), in particolare nei pressi della soglia orientale. La presenza di argilla e limo negli strati di giacitura delle monete è con molta probabilità riferibile ad allagamenti causati da esondazioni del Tevere. Un così alto numero di monete perdute o abbandonate nel Caseggiato delle due scale è verosimilmente da ricondurre ad eventi esterni e a fattori economici, oltre che all'intensità degli scambi commerciali che vi avvenivano.

(H) Pratica di Mare, 1967 (dep.: V sec. d.C.)

Ripostiglio composto da 174 esemplari, nella maggior parte AE4, formato principalmente durante il regno di Valentiniano III.

La composizione del ripostiglio può essere distinta in due gruppi di esemplari. Da una parte le emissioni di Valentiniano III coniate a Roma, che indicano il periodo di formazione del gruzzolo e che costituiscono, con 65 pezzi, approssimativamente il 43% del totale classificabile. Dall'altra un eterogeneo gruppo di monete anteriori all'anno 425 d.C. databili prevalentemente al IV secolo d.C. Nel secondo gruppo l'esemplare più antico è una imitazione di un antoniniano di Tetrico II.

Zecche di Alessandria, Aquileia, Cizico, Costantinopoli, Heraclea, Lione, Nicomedia, Roma e Tessalonica.

(H) Rocca Priora, verso Valle della Molarra o presso il colle Scappucciato, fine XIX sec. (dep.: seconda metà VI sec.)

Verso la fine del XIX secolo, nei pressi di Rocca Priora, venne rinvenuto un orciolo contenente vari solidi AV di età bizantina, tutti di conservazione eccezionale. Il gruzzolo venne disperso velocemente: nel 1884 il pittore Pietro Gagliardi mostrò 20 solidi a Giuseppe Fiorelli, a quel tempo Direttore Generale delle Antichità e Belle Arti. L'archeologo vide:

- 2 solidi di Zenone (474-491 d.C.);
- 11 soldii di Anastasio I (491-518 d.C.);
- 5 solidi di Giustino I (518-527 d.C.);
- 2 solidi di Giustiniano I (527-565 d.C.).

Nello stesso periodo anche Giuseppe Tomassetti vide parte del gruzzolo: uno studente gli mostrò alcuni solidi battuti a nome di Anastasio I.

Fiorelli indicò il ripostiglio proveniente da una vigna non meglio identificata ubicata in territorio tuscolano verso la Valle della Molar. Tomassetti invece lo indicò proveniente da Colle Cappuccio (o Scappucciato), immediatamente a Sud-Ovest di Rocca Priora.

Cons.: Disperso.

Da lavori di urbanizzazione di competenza comunale nelle aree del Celio, Esquilino, Viminale, Termini, 1.267 AE3 della zecca di Roma ascrivibili all'inizio del V sec. d.C.:

- 1.213 es. della serie *Urbs Roma Felix*, emesse a nome di Onorio, Arcadio e Teodosio II tra 404 e 410;
- 54 es. dell'emissione *Victoria Romanorum* battuta a nome dell'imperatore Prisco Attalo tra novembre e dicembre del 409.

Eventuali tesori furono deposti a partire dal 408-409 AD (due assedi di Roma da parte dei Goti di Alarico).

Il materiale numismatico è stato raccolto nel corso di diversi anni accorpondo vari rinvenimenti, sia singoli che di tesori, di cui non è stata redatta né conservata alcuna documentazione. Il materiale in oggetto è parte di un nucleo monetale più grande, denominato "Sottosuolo Urbano 2", con la stessa provenienza, che fu conservato nell'Antiquarium Comunale e alla fine del XX secolo fu restaurato e sommariamente classificato. Negli ultimi 9 anni è diventato oggetto di studio e pubblicazione.

(H) Roma, Aventino, 1893 (*dep.:* fine II secolo d.C.)

Found in Rome during construction work, this hoard contained several hundred aurei of Marcus Aurelius and Lucius Verus, many fresh and as struck. While a considerable number were retained by the Vatican museum, all of the remainder, including many examples struck from the same pair of dies, were sold. As a result, virtually all of the coins known of this type (*RIC* 512) derive from that find.

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(SF) Roma, basilica di San Lorenzo in Damaso, complesso della Cancelleria, n.s. (dep.: I sec. a.C. – XX sec.)

Gli scavi nel complesso della Cancelleria della basilica di San Lorenzo in Damaso a Roma hanno restituito 249 monete, che quanto a data d'emissione abbracciano un arco cronologico molto ampio, compreso tra la tarda età repubblicana e il XX secolo.

Tra le monete di età romana si nota un evidente sbilanciamento quantitativo in favore delle emissioni tardoantiche. Se tuttavia queste sono presenti quasi esclusivamente con i nominali minori, nell'ambito del numerario di I-III secolo gli assi-dupondi prevalgono sui quadranti, che pure non mancano. Questo chiasmo nelle frequenze è un fenomeno ampiamente riscontrato altrove e buon indice della diversità di struttura economica e monetaria vigente tra I-III secolo da una parte e IV-V secolo dall'altra. Le monete risultano normalmente più antiche dei contesti d'appartenenza, la cui datazione è basata sullo studio del materiale ceramico e dei documenti d'archivio.

Una parte dei reperti formava un piccolo insieme, deposto entro una piccola fossa rivestita di tegole *mammatae* e riempita di sabbia depuratissima (US 932). Nello specifico, il piccolo deposito conteneva un asse di Augusto divinizzato, battuto verso la fine del principato di Tiberio, tre assi di Nerone della IV serie, uno della V serie e infine un dupondio di Claudio su cui era apposta la comune contromarca NCAPR, datata tradizionalmente all'età neroniana e messa in relazione con il *congiarium* del 57 o la riforma monetaria del 64. Tale sigla era di conseguenza letta nella parte iniziale NCA come abbreviazione della titolatura di Nerone (*Nero Caesar Augustus*), nella parte

finale PR come riferimento al *Populus Romanus* o all'operazione di verifica della moneta (*probavit, probatum*).

Tra i materiali di età medievale e moderna si segnalano in particolare:

- Giovanni IX e Lamberto, denaro *antiquiores*, zecca di Roma, 898-900 (*MEC* 1, pp. 568-569 nn. 1063-1064);
- Athelstan, *penny*, zecca di Norwich, 933-939 (*SCBI* 34, tav. VII nn. 146-147);
- Ottone III, denaro, zecca di Pavia, 983-1002;
- Federico II, 2 piccioli, zecca di Verona, 1218-1250;
- Picciolo od obolo, zecca di Savona, 1350-1464;
- svariati denari provisini della zecca di Roma;
- gettone-*Rechenpfennig* di Norimberga, nave/scudo francese, 1490-1550;
- altre monete delle zecche di Venezia (o Mantova, o Verona), Lucca (tra cui un denaro falso), Firenze, Siena, Pesaro, Ancona, Macerata, Camerino, Perugia, Foligno, Viterbo, Roma, L'Aquila, L'Aquila o Chieti, Napoli, zecca non identificabile dell'Italia meridionale.

Le monete della zecca di Lucca, provenienti dall'area della Cancelleria, sono così classificabili:

- US 471-Per. 12-Fase C: 2 Denari di Lucca, seconda metà del XII sec.;
- US 472-Per. 12-Fase C: 1 denaro di Lucca, seconda metà del XII sec.;
- US 477-Per. 13-Fase B: 1 denaro di Lucca, seconda metà del XII sec.

Bibl.: MUNZI 2009; BALDASSARRI 2021, Appendice B2 [Q2] (cita le monete di Lucca); VALCI 2021, p. 206 n. 33 (cita per la presenza di *antiquiores*).

Ripostiglio, con monete X-XI secolo, ritrovato nel campanile della basilica. Oltre 1.000 denari AR di 62 zecche di Italia, Francia, Inghilterra, Germania, Borgogna, Olanda, Fiandre, Ungheria.

- BLUNT 1986: Cnut “Ethric on Rumford”, Edward the Confessor “Godfrine on Lund”.
- SACCOCCI 2001-02: denari AR Ottone I-II/Pavia (*ottopivsrex*, 962-967), Ottone II/Pavia (*avgvstvs*, 973-983), Ottone III/Pavia (*inclitacivitas*, 983-996), Ottone III/Pavia (*tercius*, 996-1002).
- MEC 12, p. 690 n. 101: oltre 1.000 AR, con 2 o 3 MI/AE, con denari provenienti da oltre 30 zecche, tra cui Lucca, Pavia, Milano Verona (notati 4 denari enriciani di Ottone I-III, conati fino al 1106), Venezia (con denari enriciani raffiguranti san Marco, conati tra il 1082 c. e il 1164), Vienne, Ginevra, Saint Jean de Maurienne, Besançon, Chalons-sur-Saône, Lione, Tolosa, Limoges, Angoulême, Melle, Issoudun, Bourges, Tours, Parigi, Orléans, Sens, Nevers, Torkes, Langres, Chartres, Chateaudun, Le Mans, Rennes, Rouen, Basilea, Zurigo, Speyer, Worms, Colonia, Bruxelles, Frisia, Groningen, *Regia Civitas* (Ungheria), Lincoln, Stamford, Colchester.
- BALDASSARRI 2021, p. 130 n. 8: ritrovamento fortuito in circostanze ignote di più di 1.000 monete di 62 zecche di Italia, Francia, Inghilterra, Germania, Borgogna, Olanda, Fiandre, Ungheria. Data di chiusura incerta perché le modalità di recupero dei pezzi non furono tali da garantire né l'integrità del complesso, né l'assenza di materiale inquinante. Per la zecca di Lucca segnalati alcuni denari ottoniani del tipo OTTOPIVSREX e altri del tipo CIVITATE e di Ugo Duca di Toscana e Giuditta Duchessa.

Esposti nel 2010 (ultimi scavi?):

- *as* AE Vespasiano (*cos III/victoria avgvsti*; gr. 9,33; n. inv. 615) con inciso *XLII*;
- denaro AR Ottone I-II/Pavia (*ottopivsre*, 962-967; gr. 0,93; n. inv. 269);
- denari R Ottone/Lucca (*ottopivsrex*, 962-967 o 983), Ottone III/Lucca (*civitate*, 983-986); Ugo e Giuditta, Lucca (*dvxtuscie dvxivdita*, 990-1001).

(H) Roma, Foro di Traiano, monastero di sant'Urbano, scavi 1998 (dep.: primo quarto del XVI sec.)

Da scavi nell'area del monastero di sant'Urbano, all'interno del Foro di Traiano, 34 MI e 3 boccali (US 2379) databili dall'inizio del XVI secolo, principalmente tra il 1513 e il 1550 circa. Zecche di Benevello, Piacenza, Ravenna, Siena, Ancona, Camerino, Pesaro, Perugia, Roma.

Secondo gli AA., il fatto che le monete siano state trovate sparse nel terreno, in associazione a tre boccali, lascerebbe inoltre supporre che i 34 esemplari raccolti siano soltanto ciò che resta di un ripostiglio originariamente più cospicuo, e che i tre contenitori siano stati utilizzati proprio per custodirlo. Nel corso del secondo quarto del XVI secolo il tesoro potrebbe dunque essere stato trafugato, o magari prelevato improvvisamente dal suo legittimo proprietario. Durante la frettolosa operazione, mani troppo agitate potrebbero aver dimenticato a terra alcune delle molte monete, proprio attorno a quei boccali in cui il tesoro era stato inizialmente raccolto.

(oth) Roma, Largo Argentina, area sacra, scavi 1926 – anni '50 del XX sec. (dep.: II sec. a.C. – post 1572)

Dagli scavi dell'area sacra di Largo di Torre Argentina iniziati nel 1926 sotto la direzione di Giuseppe Marchetti Longhi durante il Governatorato di Roma e proseguiti in modo discontinuo fino al secondo dopoguerra, monete di età romana, medievale e moderna.

- tre distinti gruppi di monete antiche:

- un ripostiglio composto da 19 monete in argento di epoca repubblicana – 16 denari e 3 quinari – chiuso con due quinari di C. *Egnatuleius* (RRC 333/1, Med. Inv. nn. 10035-10036) emessi nel 97 a.C.;
- singoli ritrovamenti di monete in argento e bronzo (2 AR e 62 AE di epoca repubblicana, 27 AE di epoca imperiale, con presenza di moneta frazionata), alcuni dei quali ricollegabili a una *stips* in deposizione secondaria di fronte al Tempio A;
- un *thesaurus*;

- 3 monete di epoca medievale;

- 1 denaro di Pavia emesso a nome dell'imperatore Ottone II (973-983) rinvenuto *vicino l'ara*;
- 1 denaro della Repubblica di Siena (secc. XI-XII) rinvenuto nell'angolo NE del recinto dell'area sacra, *in una fenditura antica fra due frammenti di architrave di travertino, posti su muratura laterizia moderna*;
- 1 quattrino del Senato Romano rinvenuto nell'angolo NE del recinto dell'area sacra, *fra il secondo e il terzo blocco di travertino del pilastro smontato fino al piano stradale per la costruzione della soletta di cemento armato del marciapiedi pensile*;

- ripostiglio di 36 AR+MI di età moderna (1 bagattino, 1 baiocco, 25 quattrini, 7 giulii, 1 grosso e 1 soldo; con diverse monete rotte, forse alcune intenzionalmente frazionate?) emessi da zecche marchigiane (Ancona, Camerino, Fano, Macerata e Urbino), laziali (Castro e Roma) e di Venezia nel XVI secolo, chiuso da un quattrino della zecca di Ancona emesso tra il 1572 e il 1585.

Gli esemplari di età medievale e moderna non sono presenti negli elenchi di monete redatti all'epoca del Governatorato e attualmente conservati all'interno del Fondo Marchetti Longhi (Sovrintendenza ai Beni Culturali di Roma Capitale, Fondo Marchetti Longhi, faldone II, fasc. 11). Compaiono invece nella lista aggiornata di Maria Panvini Rosati Cotellessa, anch'essa inclusa nel Fondo Marchetti Longhi e realizzata in occasione degli scavi condotti nell'area negli anni '40 e '50 del XX secolo.

(H) Roma, nel suburbio sud-ovest lungo l'antica via Laurentina, n.s. (dep.: inizio IV sec. d.C.)

Gli scavi condotti nel suburbio sud-ovest lungo la via Laurentina antica dalla Soprintendenza Speciale per i Beni Archeologici di Roma hanno permesso recentemente di indagare i resti di un complesso architettonico con fasi edilizie datate tra il II secolo a.C. e la fine del III secolo d.C., ma con livelli di fruizione fino alla fine del IV secolo, presumibilmente una *statio* o uno *stabulum*, nell'ambito del quale è stato rinvenuto un ripostiglio monetale databile alla piena età constantiniana.

Il deposito dal quale le monete sono state recuperate era costituito dai resti di una cassetta, contenente 50 folles in maggioranza coniate sotto Massenzio ed altri oggetti di pregio, oltre ad un chiodo bronzo con segni incisi interpretati come simboli apotropaici.

(SF) Roma, Palatino, area sud-ovest, santuario della Magna Mater e settore sud occidentale della Domus Tiberiana, n.s. (dep.: I-XIX sec.)

Nell'ambito delle indagini stratigrafiche effettuate negli ultimi anni dall'Università di Roma Sapienza nell'area sud-ovest del Palatino si è rinvenuto un elevato numero di monete, reperti ceramici, in vetro e altri oggetti di pregio (in metallo, osso lavorato e pietre dure) riferibili ai contesti di vita, abbandono, distruzione e riuso post-antico dei vani del quartiere meridionale dei servizi del tempio della Magna Mater e di una latrina posta sul fianco sud della Domus Tiberiana.

Complessivamente 627 monete, in prevalenza di età romana tardo-imperiale, un contorniato e cinque tessere anepigrafi in bronzo.

Notati:

- monetazione vandala
 - Genserico (429-477 d.C.), Aes 4, MI; zecca di Cartagine, post 439 d.C. (*BMC Vandals*, 4, nn. 18-20, pl. I, 11);
- monetazione ostrogota
 - Atalarico (526-534), Aes 4, MI, zecca di Roma (*BMC Ostrogoths*, 66, n. 47);

- monetazione bizantina

- Flavio Maurizio Tiberio (582-602), mezzo follis (3 es.), AE, zecca di Roma (*MIB* 2, p. 587, n. 106, tav. 36);

- monetazione moderna

- Gregorio XVI (1831-1846), Baiocco 1843, CU, zecca di Roma

Segnalate svariate monete non identificabili ma in strati databili all'età alto-medievale, tardo-medievale e moderna.

(D) Roma, piazza Cavour, monumento a Camillo Benso di Cavour, settembre 2010 (dep.: 14 marzo 1885)

Nel settembre 2010 l'impresa incaricata della realizzazione di un grande parcheggio sotterraneo nell'area di piazza Cavour in Roma si imbatté, nel corso dei lavori per sostenere il monumento a Camillo Benso conte di Cavour, in una cassetta di travertino posta nella fondazione del monumento stesso; una fessura lasciava intravedere la presenza all'interno di un tubo di piombo sigillato. Qualche settimana più tardi, il 19 ottobre 2010, la cassetta veniva aperta alla presenza di autorità e giornalisti; il tubo di piombo, anch'esso dischiuso sul posto, svelava in diretta il suo contenuto: una pergamena e alcune monete.

Il rito pubblico della posa della prima pietra venne celebrato il 14 marzo 1885. In quella occasione, venne inserito – in base alle attestazioni dei giornali dell'epoca – *un esemplare di tutte le monete in oro, argento della coniazione 1884*.

I reperti numismatici sono rappresentati dalla moneta aurea da L. 20 e da quelle argentee da L. 2 e 1, tutte del 1884.

Nello stesso anno 1884 fu in realtà coniato in soli 2.532 esemplari anche un aureo da L. 50, che risulta però assente dal deposito di fondazione.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: burial, unknown context

(H) Roma, Torre delle Milizie, 1932 (dep.: 1181-83)

Ripostiglio rinvenuto nel 1932 in occasione di operazioni di sterro tra i Mercati di Traiano e la Torre delle Milizie. Il nucleo comprende 1.371 denari AR, per lo più francesi, databili tra i secoli X e XII, e un *hystamenon* bizantino.

Segnalati:

- denari provisini AR di Champagne: 972 di Tebaldo II (1125-1152), 310 di Enrico I o II (1152-1197);
- 14 denari AR della zecca di Pavia a nome di un Ottone;
- 14 denari AR Lucca a nome di Enrico, databili al XII sec.;
- 1 AV *hystamenon* Basilio II e Costantino VIII (976-1025), databile tra il 1005 e il 1025.

Bibl.: DUPRÉ THESEIDER 1933; TRAVAINI 1992, pp. 164, 171; [ROVELLI 2000], p. 419; ARSLAN 2004i, n. 3210; TRAVAINI 2007, p. 217; TRAVAINI 2007a, p. 125; BALDASSARRI 2021, Appendice C2 n. 3; VALCI 2023.

Discovery of the find: *discovery during archaeological investigations*

(oth) Roma, tra via Tritone e via Due Macelli, n.s. (dep.: n.s.)

Le indagini archeologiche condotte nell'isolato posto tra via del Tritone e via Due Macelli hanno restituito un cospicuo numero di monete: 326 sono state rinvenute isolate all'interno delle stratigrafie archeologiche e alcune centinaia in forma di “tesoretto” (rinvenuto nell'edificio E/81 e databile all'inizio del V sec. d.C.). Per MARANI 2017, p. 229 si tratta di monete che confluirono nel deposito archeologico con modalità e intenzioni differenti in seguito ad azioni fisicamente e concettualmente distinte.

Le 326 monete raccolte negli strati coprono un arco cronologico che va dalla media età repubblicana (momento a cui si può far risalire l'arrivo a Roma di una litra di zecca siciliana) fino all'epoca moderna, documentata da poco più di una ventina di esemplari della metà del XIX secolo. Non si sono monete dal VII sec. d.C. fino all'epoca moderna.

Negli strati di età moderna:

- edificio E/69-70, US 1306 (urbanizzazione di età moderna, primo quarto del XIX sec.)
 - 1 baiocco, Pio VII (1800-23), zecca di Roma;
 - 1 baiocco non leggibile, XVIII-XIX sec.;
- edificio E/69, US 1488 (fogna, seconda metà del XIX sec.)
 - 1 *nummus*, metà del IV sec. (leggibili solo tracce di porta di accampamento);
 - 1 pezzo da 3 baiocchi 1849, Repubblica Romana;
 - 3 pezzi da 1/2 baiocco 1849, Pio IX;
 - 5 pezzi da 2 baiocchi 1850, Pio IX;
 - 1 soldo 1867, Pio IX;
 - 2 pezzi da 1 soldo, XIX sec.;
 - 1 centesimo, XIX sec.;
 - 5 monete non identificabili;
 - 1 baiocco (?) deformato.

Discovery of the find: discovery during archaeological investigations

(SF) Valmontone, Colle Maiorana, nell'area prospiciente la catacomba rurale di sant'Ilario ad Bivium, n.s. (dep.: III-XVII secc.)

Le indagini archeologiche condotte dalla Pontificia Commissione di Archeologia Sacra nell'area prospiciente la catacomba rurale di sant'Ilario (nell'attuale territorio comunale di Valmontone, a circa 60 chilometri a sud di Roma), hanno messo in luce una piccola struttura di culto mononave, in uso dal VII-VIII secolo d.C. fino al XIV, edificata al di sopra di un'area cimiteriale subdiale in funzione dalla seconda metà del IV al VII secolo. Il sepolcreto, di notevoli dimensioni, è stato messo in relazione all'abitato posto sull'altura di Colle Maiorana, nei cui pressi venne installata, fra III e IV secolo d.C., la *Statio ad bivium*, ricordata nella *Tabula Peutingeriana* al XXX miglio della via Latina, nel punto di raccordo con la via Labicana.

Lo scavo ha restituito 233 monete bronzee che rappresentano i nominali minori di ciascun periodo, come è solitamente attestato nelle stratigrafie archeologiche. I reperti numismatici,

malgrado la prolungata frequentazione del sito, dal IV al XIV secolo, si distribuiscono prevalentemente fra la metà del IV e la seconda metà del VI secolo. Oltre il 97% delle monete, dunque, risulta coprire un arco cronologico esiguo, limitato alle fasi di utilizzo del sepolcreto *subdivo*.

Per Giuntella ([GIUNTELLA 1998]), in due tombe, “gruzzolo” bizantino da Costantino I a Giustiniano; monete di Giustino II per un totale di 251 esemplari.

Per Marani (MARANI 2009, MARANI 2011): 233 monete AE, prevalentemente fra la metà del IV e la seconda metà del VI secolo. Segnalate anche monete frazionate e tondelli non conati.

Bibl.: FIOCCHI NICOLAI 1988-89; [GIUNTELLA 1998], p. 70 (due tombe con gruzzolo tra Costantino e Giustiniano); [MARTORELLI 1992], p. 80; GIOVANNETTI 2007, p. 234; MARANI 2009; MARANI 2011 (analisi più dettagliata della distribuzione cronologica dei materiali).

(uns) Velletri, chiesa delle SS. Stimate di san Francesco (gia chiesa della Madonna della Neve),
metà XVIII secolo (*dep.*: n.s.)

Intorno alla metà del XVIII secolo il cardinale Stefano Borgia comperò a *magno pretio* due lingotti bronzei, l'uno del tipo aquila su fulmine / pegaso e legenda *ROMANORVM*, l'altro del tipo spada / fodero. Eckhel, descrivendoli nel 1786, li indicò provenienti dall'*agro Veliterno*. Pochi anni dopo Carlo Fea, in una lettera datata 23 dicembre 1794, riferì che *nel territorio fu trovata una lamina di bronzo in lingua volsca* [la celebre *tabula veliterna*], e due antichissimi assi rettangoli. Ciò, a detta dell'erudito, avvenne posteriormente al rinvenimento delle terrecotte borgiane, portate alla luce nel 1784 all'interno della chiesa delle SS. Stimate di san Francesco (già della Madonna della neve). Nel XIX secolo Mommsen analizzò il testo della *tabula veliterna* e nel corso della sua catalogazione, la contestualizzò insieme alle terrecotte borgiane rinvenute nella chiesa in questione. L'insieme di questi dati portò nel 1910 l'Haeberlin a collegare alla chiesa delle SS. Stimate di san Francesco il ritrovamento dei due lingotti bronzei appartenenti alla collezione Borgia. Tuttavia, allo stato attuale della ricerca, il dato non può trovare alcuna conferma.

(H) Velletri, loc. Troncavia, 1825 (dep.: fine I sec. a.C.)

Nel 1825 Luigi Cardinali denunciò il ritrovamento di un ingente ripostiglio nel territorio di Velletri: *Non è gran tempo che nel territorio Veliterno fu trovato molto numero di antiche medaglie; le più consolari, o come dicono di famiglia. Non so la certezza del dove, del quando si rinvennero, perché questo è un mistero che non mi è stato possibile penetrare; ed abbenchè molte ne abbia vedute in mano a molti coltivatori, pure da niuno mi è venuto fatto poter discuoprire dove e come le avesse egli trovate. Se potessi trarre argomento del luogo dove fu scoperto il bottino dalla ubicazione de' fondi posseduti da quelli che mi mostrarono le medaglie, direi non esser lungi dal sito, da cui sono già sei lustri, tornò a luce la celebre Minerva che ora forma il più bell'ornamento del reale museo di Parigi. [...] par da credere che non tutte riunite si escavassero quelle monete; perché non così facilmente sarebbero andate disperse per le mani di molti [...] possono ascendere a più centinaia, ma forse non toccano il migliajo.*

Dai pochi dati esposti dal Cardinali si deduce pertanto che agli inizi del XIX secolo a Velletri, in località Troncavia, venne rinvenuto e poi disperso un ingente gruzzolo di nominali d'argento, per lo più repubblicani. Gli esemplari visti e sommariamente descritti dallo studioso, si datano tra gli inizi del II secolo a.C. e la media età augustea.

Nature of the site at the time of concealment or loss: necropolis / cemetery

(H) Velletri, piazza Cairoli, fine luglio 1950 (*dep.*: c. 1650-60)

Verso la fine del luglio 1950, durante i lavori di ricostruzione di uno stabile danneggiato dai bombardamenti situato in piazza Cairoli, venne scoperto in un muro un ripostiglio di 78 monete d'oro italiane e straniere coniate tra il XVI e la prima metà del XVII secolo.

Il ripostiglio venne probabilmente obliterato tra il 1650 e il 1660, e si componeva di 33 monete di zecche italiane (notate monete di Parma e papali) e 45 monete di zecche straniere (in maggioranza Spagna, poi Francia, Germania, Svizzera, Paesi Bassi, Turchia).

Piazza Cairoli era dominata dall'imponente edificio della famiglia Ginnetti, completamente distrutto durante la seconda guerra mondiale. Proprio ai Ginnetti, famiglia di origine bergamasca nota nel XVII secolo per il suo mecenatismo, potrebbe attribuirsi in via ipotetica la diretta o indiretta proprietà di tale ricco ripostiglio.

Cons.: Inizialmente le monete furono trafugate dagli operai autori del rinvenimento, successivamente vennero recuperate dalla Polizia di Stato e consegnate in parte al Museo Nazionale Romano.

(H) Bolsena, area archeologica, «Tabernae» I e II, scavi 1972 (dep.: II-IV sec. d.C.)

Durante gli scavi del 1972 furono rinvenuti due piccoli lotti di monete romane tra le strutture che costeggiavano il foro, nelle *Tabernae* I e II. Le monete erano all'interno degli strati di cenere e bruciatura, più o meno allo stesso livello stratigrafico, mescolati a cocci di ceramica e frammenti di intonaco dipinto.

Il primo lotto era costituito da 31 monete, tutte rinvenute sporadicamente nella *Taberna* I. Coprono un periodo che va dalla fine del II secolo d.C. al 310 d.C.. Il secondo lotto, di 49 monete, comprende 6 monete isolate e un gruppo di 43 monete trovate vicine in un angolo della *Taberna* II. Quest'ultimo gruppo, anch'esso rinvenuto nello strato bruciato, era stato conservato in un piccolo sacchetto deperibile prima di essere bruciato.

Discovery of the find: discovery during archaeological investigations; discovery in fabric / leather purse

Nature of the site at the time of concealment or loss: urban settlement (oppidum, colony, town)

(oth) Bolsena, chiesa collegiata di di santa Cristina, scavi 1880 (dep.: post 1002)

Nel 1880, durante gli scavi decisi dal Capitolo della chiesa collegiata di Santa Cristina a Bolsena per ripulire dai detriti la catacomba situata sotto la collina attigua alla chiesa, venne recuperato diverso materiale ceramico ed epigrafico, oltre a numerose monete romane per lo più di epoca

costantiniana e medievale, tra cui un ripostiglio di 245 AR e un denaro di Arduino coniato nella zecca di Milano.

Secondo la descrizione in STEVENSON 1880, nel rimuovere i rottami che riempivano un arcosolio era stata recuperata la parte inferiore di un recipiente di terracotta con all'interno *duecento quarantacinque monete colle impronte di Ottone III e Enrico II*, mentre la moneta di Arduino costituirebbe un ritrovamento isolato in tomba. Il GAMURRINI (1894, p. 311), invece, alcuni anni più tardi, ricordando la scoperta così scriveva: *L'ambulacro, che a sinistra si diparte dalla grotta di s. Cristina, teneva nel suo primo arcosolio un cadavere, presso il capo del quale era collocato un vasetto con circa trecento denari d'argento, la maggior parte lucchesi, me ne erano pure delle zecche di Lombardia, e vi trovai il preziosissimo denaro d'Arduino re d'Italia battuto a Milano*.

Per VANNI 2013 (p. 266) i 245 AR sarebbero denari di Ottone III e Enrico II di Sassonia conati nella zecca di Lucca, mentre il denaro di Arduino proverrebbe da una tomba diversa da quella in cui fu rinvenuto il ripostiglio.

Cons.: Denaro di Arduino: Milano, Civiche Raccolte Archeologiche e Numismatiche, inv. Brera 1855 (VANNI 2013, p. 267, fig. 1 per una illustrazione).

(SF) Graffignano, castello Baglioni, n.s. (dep.: XIV-XV sec.)

Da uno dei butti del Castello Baglioni di Graffignano, 1 AR + 3 MI, queste ultime in cattivo stato di conservazione:

- ducato di papa Callisto III (g 3,53; mm 23,40) battuto a Roma negli anni del suo pontificato (1455-1458), raffigurante al dritto lo stemma Borgia e al rovescio San Pietro in una navicella che sostiene una lunga croce;
- quattrino della zecca di Siena databile fra la metà del XIV e la metà del XV secolo;
- esemplare poco leggibile ma riconducibile al medesimo ambito cronologico;
- esemplare illeggibile.

Le monete provengono dai primi livelli di scarico accumulatisi all'interno del Butto 2, costituiti essenzialmente dall'immondizia e dagli scarti della mensa e della cucina prodotti giornalmente; la datazione dell'esemplare di Callisto III consente di fissare questa fase di utilizzo del butto nella seconda metà del XV secolo.

(P) Vitorchiano, area archeologica di Ferento, 1999 (dep.: inizio V sec. d.C. (?))

Nel corso degli scavi dell'Università della Tuscia, che si sono susseguiti dal 1994 fino al 2003 sotto la direzione di G. Maetzke nel sito della colonia romana di Ferento, hanno portato al rinvenimento nel 1999 di una “borsa” databile al IV e forse anche all'inizio del V secolo d.C., composta da 542 esemplari.

Al 2005 erano stati soltanto 234 pezzi. Il materiale studiato, che quindi corrisponde a circa la metà del ritrovamento, è composto da tondelli in piombo (194 pezzi) e da monete di bronzo (40 pezzi), spesso frammentarie, tra cui 1 *aes* 2, 29 *aes* 3 – di cui 12 tosati e tagliati a metà o in terzi – e 10 *aes* 4. La quasi totalità delle monete studiate è risultata illeggibile (219 esemplari) e per quelle a cui è stato possibile attribuire una datazione il *terminus post quem* è rappresentato da un *aes* 3 del tipo *Victoria auggg* (378-383 d.C.).

Un'altra borsa era stata trovata sullo stesso sito nel 1996 (v. ritrovamento n. 9483).

Nature of the site at the time of concealment or loss: burial, unknown context

(H) Genova, fraz. San Quirico, 1892 (dep.: XVI sec.)

Nel 1892 un cavatore di sabbia di nome Giovanni Gaggero, aveva casualmente rinvenuto nel greto del fiume Polcevera alcune monete d'oro, da lui consegnate al suo Comune al suo Comune. L'allora sindaco Angelo Dellepiane avisò il prefetto di Genova, il quale lo autorizzò alla vendita a beneficio delle casse comunali.

Alla diffusione della notizia sul sito accorsero altri cavatori di sabbia, i quali rivennero altre monete, per un totale di 3.600+ AV della zecca di Genova, conati fra il XII e il XVI secolo.

Noto anche come *tesoro di san Quirico*. Non è escluso che il ripostiglio contenesse anche esemplari di altre zecche oltre a Genova, non necessariamente in oro.

Cons.: In larga parte disperso, solo in tempi recenti rinvenuti 17(+) es. presso le Civiche Raccolte Numismatiche di Milano, senza documentazione di ingresso e con provenienza attestata solo dall'etichetta *Ripostiglio di Valpolcevera*.

Altre monete a Genova, nei musei di Palazzo Tursi?

(H) Genova, via Venezia, 1908 (dep.: seconda metà XIV secolo)

Il riordino espositivo delle collezioni del Medagliere Genovese, attinente al trasferimento nel nuovo ambito museale di Palazzo Tursi a Genova, ha richiamato l'attenzione, dopo un periodo di oblio, su un tesoretto recuperato nel 1908 a Genova, in via Venezia, andato in parte disperso, di cui si conservano 354 pezzi, databili dal 1139 ai primi anni della seconda metà del XIV secolo, per la maggior parte emesse da zecche italiane (Genova, Bologna, Milano, Venezia, Firenze, Pisa, Lucca, Volterra, Messina, Asti, Cortemilia, Chivasso), le rimanenti da autorità francesi (Provenza). Tra i pezzi piemontesi, riconosciuto un tirolino di Cortemilia e un grosso di tipo veneziano di Chivasso.

Cons.: Genova, Palazzo Tursi. Parzialmente disperso.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(SF) Godano, castello, scavi 2014-16 (*dep.:* XIV-XIX secc.)

Nella rocca di Godano sono stati individuati manufatti che attestano la presenza di una zecca clandestina, che potrebbe avere coniato falsificazioni di monete genovesi e piemontesi tra il pieno XIV e l'inizio del XV secolo.

Tra i materiali recuperati riferibili alla zecca clandestina si segnalano 7 monete (alcune delle quali false), 6 tondelli non conati, 3 lingottini in piombo e 1 lamina in piombo "bollata", 1 codolo di fusione in piombo, 27 laminette fustellate e 2 scorie. Altre monete ancora dall'area.

Per quanto riguarda più nello specifico le monete, si segnalano:

- moneta indeterminata (XIV-XV sec.), AE, 0,86 g, 19×18 mm (US 1010_RP5);
- falsificazione del grosso da 5 della zecca di Carmagnola per Michele Antonio di Saluzzo, dagli strati di distruzione della rocca (US 1016_RP12), primo quarto del XVI secolo;
- minuto, zecca di Genova (XV sec.), AE, 0,48g, 12×10,5 mm (US 1073_RP9);
- minuto, zecca di Genova (XV sec.), AE, 0,42g, 11×10 mm (US 1074_RP46);
- quattrino, zecca di Siena (fine XV sec.), MI, 1,08g, 18×17,5 mm (US 1078_RP47);
- minuto, zecca di Genova (XV sec.), AE, 0,56g, 12×10 mm (US 1502_RP3);
- quattrino, zecca di Pisa (terzo quarto XIV sec.), MI, 0,82g, 19,5 mm (Rec. 1500);
- quartaro, zecca di Genova (prima metà XIV sec.), MI, 0,67g, 15 mm (Rec. 3000);
- moneta indeterminata (XVIII-XIX sec.), AE, 1,32g, 18,5 mm (Rec. 1500).

(uns) Luni, n.s. (dep.: n.s.)

Collezione Fabbricotti costituita in buona parte da rinvenimenti in area lunense, complessivamente 51 esemplari.

Segnalati:

- moneta bizantina

- $\frac{1}{2}$ *follis* AE Giustiniano/Ravenna (MIBE 235; attribuito a Matasunta);
- $\frac{1}{2}$ *follis* AE Giustiniano/Ravenna (già Salona);
- *solidus* AV Giustiniano/Roma;
- *follis* AE Giustiniano/Costantinopoli (529-539);
- *follis* AE Giustiniano/Antiochia (529-539);
- *decanoummion* AE Giustiniano/Roma (536-538);
- *pentanoummion* AE Giustiniano/Tessalonica (538-539);
- $\frac{1}{2}$ *siliqua* AR Giustiniano/Ravenna (555-565);
- *solidus* AV Giustino II/Costantinopoli (565-578);
- *tremissis* AV Giustino II/Ravenna (571; su *tremissis* di Anastasio; v. ora ARSLAN 2016);
- $\frac{1}{2}$ *follis* AE Giustino II e Sofia/Costantinopoli;
- 3 *decanoummion* AE Giustino II/Cartagine (565);
- 2 *pentanoummion* AE Giustino II/V/Roma;
- *decanoummion* AE Tiberio II/I/Ravenna (578-582);
- 2 $\frac{1}{2}$ *follis* AE Maurizio Tiberio/Roma (?) (582-602);
- 2 $\frac{1}{2}$ *follis* AE Maurizio Tiberio/Costantinopoli (uno del 590);
- 1 $\frac{1}{2}$ *follis* AE Maurizio Tiberio/Ravenna;
- *follis* AE Eraclio/Ravenna/XXI;
- $\frac{1}{2}$ *follis* AE Eraclio/Roma;

- 3 *follis* AE Eraclio/Costantinopoli (letture dubbie);
- ½ *follis* AE Eraclio/Costantinopoli (lettura dubbia);
- 2 *follis* AE Costante II/Costantinopoli (uno visto come arabo-bizantino);
- 2 ½ *follis* AE Costante II/Cartagine (649-659);
- ½ *follis* AE Costante II/Cartagine (659-668);
- *follis* AE illustrati del VII secolo;
- *follis* AE Costante II/Sicilia (659-668);
- *follis* AE Leone III/Siracusa (720-741);
- 3 *follis* AE Michele II/Siracusa (820-829);
- 2 *follis* AE Teofilo/Siracusa (829-842);
- *follis* AE Michele III/Siracusa (842-866);
- *follis* AE bizantino anonimo Cl. A;
- *follis* AE bizantino anonimo Cl. C;
- 3 AE scodellato XIII sec. (Manuele I?);
- ½ *follis* AE Paleologi/Rodi/sec. XIII;
- *follis* (?) AE Odessa/sec. XIII;
- *tetarteron* AE Giovanni III/Magnesia/Impero di Nicea (1222/1254).

- moneta longobarda

- *tremissis* AV Maurizio Tiberio *di fabbrica molto barbara*;
- 2 *tremissis* AV *FLAVIA LVCA*, zecca di Lucca;
- 6 1/8 *siliqua* AR con monogramma longobardo (da tomba del 1868);
- *tremissis* AV Maurizio Tiberio/Vittoria (leggenda barbarizzata);
- *tremissis* AV Eraclio/Croce (leggenda barbarizzata; attribuito alla Tuscia).

Per BALDASSARRI 2021 (p. 128), limitatamente alle emissioni di area toscana: tremisse per Eraclio con leggenda barbarizzata, attribuito alla Tuscia; 1 tremisse “stellato” anonimo di Lucca.

Cons.: La Spezia, Museo Civico.

Bibl.: ROSSI 1977-78; MURIALDO 2003, p. 28 (cita alcuni *folles*); ARSLAN 2016 (per il *tremissis* AV Giustino II/Ravenna del 571 ribattuto sul *tremissis* di Anastasio); BALDASSARRI 2021, Appendice A [a1].

Discovery of the find: discovery during archaeological investigations

(H) Luni, loc. Luni Scavi, area archeologica, 1868 (*dep.*: c. 781-793/4)

Nel 1868, da un terreno di proprietà del marchese Angelo Alberto Remedi situato sul sito dell'antica colonia romana di *Luna*, ripostiglio con 12 denari AR di Carlomagno conati prima del 793/4:

- 7 con monogramma RxF e scritta ME/MED, attribuibili alla zecca di Milano;
- 1 di Dorestad;
- 1 di Mainz/Magonza;

- 1 di Saint Martin de Tours;
- 1 di Sens,
- 1 di zecca ignota, presumibilmente di area italiana (sigla RA?).

Il ripostiglio è anche conosciuto come di *Sarzana-Luni*.

Cons.: Parzialmente disperso. Inizialmente i materiali entrarono a far parte della collezione del marchese Remedi, poi dispersa all'asta a cura di Sambon del 7 gennaio 1885. Alcuni materiali sono rintracciati a Parigi, nel Cabinet des Médailles della Bibliothèque Nationale de France.

Bibl.: DE LONGPÉRIER 1868 (prima notizia); BOYNE 1886; [SAMBON 1912], p. 91 (n. 560: possiede denaro AR Carlo Magno/Milano da questo ripostiglio); VÖLCKERS 1965, pp. 95-96; MORRISON, GRUNTHAL 1967, n. 7; LAFAURIE 1975 (riesame critico del complesso e comparazione con altri ritrovamenti); SUCHODOLSKI 1981; BERTINO 1983a; [RICCI 1993], p. 105 (data al 787 circa); BERTINO/LM 2003, p. 131; MURIALDO 2003, p. 27 (cita); ROVELLI 2004a, p. 253; ARSLAN 2004i, n. 3395 (come da *Sarzana-Luni*); COUPLAND 2010, p. 317 (cita); COUPLAND 2011, n. 12; COUPLAND 2023, pp. 113 (nota 8), 115.

Discovery of the find: fortuitous discovery, unknown circumstances

Nature of the site at the time of concealment or loss: urban settlement (oppidum, colony, town)

(SF) Luni, loc. Luni Scavi, area archeologica, scavi 1972-74 e ante (dep.: n.s.)

Complessivamente 215 monete di varie epoche rinvenute durante gli scavi ante 1972-74 (BERTINO 1973) e 254 durante gli scavi del 1972-74 (BERTINO 1977). Tra il 1967 e il 1982, rinvenute 1.200 monete (1.165 romane, 35 medievali). Individuati anche un peso vitreo bizantino con busto e monogramma (Akakios?) e due pesi monetari bizantini (PERASSI 2000).

- Moneta ostrogota: *solidus* AV Anastasio/Teodorico (ARSLAN 1989, AV 10); *tremissis* AV Anastasio/Teodorico (ARSLAN 1989, AV 18); due $\frac{1}{2}$ *siliqua* AR Anastasio/Teodorico (ARSLAN 1989, AR 5); due $\frac{1}{4}$ *siliqua* AR Anastasio/Monogramma Teodorico (ARSLAN 1989, AR 7/8); $\frac{1}{2}$ *siliqua* AR Giustino/Monogramma Atalarico (ARSLAN 1989, AR 16); due $\frac{1}{4}$ *siliqua* AR Giustino/Atalarico (ARSLAN 1989, AR 17); $\frac{1}{2}$ *siliqua* AR Giustiniano I/Monogramma Atalarico (ARSLAN 1989, AR 18); sette $\frac{1}{4}$ *siliqua* AR Giustiniano I/Atalarico (ARSLAN 1989, AR 19); due $\frac{1}{4}$ *siliqua* AR Giustiniano I/Theodahat (ARSLAN 1989, AR 21); $\frac{1}{4}$ *siliqua* AR Giustiniano I/Teodorico (ARSLAN 1989, AR 22); tre $\frac{1}{2}$ *siliqua* AR Giustiniano I/Vitige (ARSLAN 1989, AR 23); due *decanoummion* AE Ravenna/Monogramma (ARSLAN 1989, AE 11); *decanoummion* AE Roma/Atalarico stante (ARSLAN 1989, AE 12); due *folles* AE Theodahat (ARSLAN 1989, AE 13); due *15 nummi* AE Roma/Theodahat (ARSLAN 1989, AE 14; uno citato in REMEDI 1860); *15 nummi* AE con nome su quattro righe; *X nummi* AE Baduela/Re stante (ARSLAN 1989, AE 17).
- Moneta bizantina: $\frac{1}{2}$ *folles* AE Giustino I; *pentanoummion* AE Giustino I/Roma (?); *solidus* AV Giustiniano I/Roma; *tremissis* AV Giustiniano I; $\frac{1}{4}$ (?) *siliqua* AR Giustiniano I/Croce su globo (collezione Fabbricotti); due $\frac{1}{4}$ *siliqua* AR Giustiniano I (scavi 1991; MIB 78); due $\frac{1}{4}$ o $\frac{1}{8}$ *siliqua* AR Giustiniano I/*chrismon* e due stelle; *folles* AE Giustiniano I/Costantinopoli; *folles* AE Giustiniano I/Antiochia; $\frac{1}{2}$ *folles* AE Giustiniano I/Roma; $\frac{1}{2}$ *folles* AE Giustiniano I (scavi 1991; MIB 222); $\frac{1}{2}$ *folles* AE Giustiniano I/Ravenna (già Salona) (MIB250); due $\frac{1}{2}$ *folles* AE Giustiniano I; due *decanoummion* AE Giustiniano I/Roma; *decanoummion* AE Giustiniano I/Cartagine; *pentanoummion* AE Giustiniano I/Thessalonica; *solidus* AV Giustino II/Costantinopoli; *tremissis* AV Giustino II/Ravenna su *tremissis* AV Anastasio; due $\frac{1}{8}$ *siliqua* AR Giustino II/*chrismon* e due stelle (altre cinque segnalati nella collezione Remedi); $\frac{1}{2}$ *folles* AE Giustino II/Costantinopoli; $\frac{1}{2}$ *folles* AE Giustino II e Sofia/Roma; $\frac{1}{2}$ *folles* AE Giustino II e Sofia/Costantinopoli; *decanoummion* AE Giustino II/Cartagine; due *pentanoummion* AE Giustino II/Roma; *solidus* AV Tiberio II; $\frac{1}{8}$ *siliqua* AR Tiberio II/Croce su gradini/Ravenna (MIB 22); *decanoummion* AE Tiberio II/Ravenna (WROTH 1908, 164); *tremissis* AV Maurizio Tiberio/Ravenna (scavi 1991; MIB 50 [?]); $\frac{1}{8}$ (?) *siliqua* AR Maurizio Tiberio/Croce in

ghirlanda (collezione Remedi); *folles* AE Maurizio Tiberio/Costantinopoli; *folles* AE Maurizio Tiberio/Cizico; tre $\frac{1}{2}$ *folles* AE Maurizio Tiberio/Roma (due incerti); due $\frac{1}{2}$ *folles* AE Maurizio Tiberio/Costantinopoli; $\frac{1}{2}$ *folles* AE Maurizio Tiberio/Ravenna (WROTH 1908, 283); *tremisses* AV Eraclio; *miliaresion* AR Eraclio ed Eraclio Costantino/Ravenna (?) (MIB 153?); AE Eraclio ed Eraclio Costantino/Ravenna; *folles* AE Eraclio ed Eraclio Costantino/Ravenna; tre *folles* AE Eraclio ed Eraclio Costantino/Costantinopoli; $\frac{1}{2}$ *folles* AE Eraclio e Eraclio Costantino/Roma; $\frac{1}{2}$ *folles* AE Eraclio e Eraclio Costantino/Costantinopoli. Bertino segnala inoltre quattro *folles* AE e quattro $\frac{1}{2}$ *folles* AE Costanzo II (zecche di Roma, Costantinopoli, Cartagine, forse Sicilia); $\frac{1}{2}$ *folles* AE Giustiniano II (scavi 1991; MIB 95); *folles* AE Leone III/Siracusa; tre *folles* AE Michele II/Siracusa (821-829); due *folles* AE Teofilo/Siracusa (829-842); *folles* AE Michele III e Teodora/Siracusa (852-856); peso circolare bizantino/Alessandria con +/N.Γ (tre) in ghirl. (gr.12,64); peso quadrato per sei solidi con +/NS in ghirlanda (gr. 28.56).

- Moneta longobarda: *tremisses* AV M.Tiberio “di fabbrica molto barbara”; due *tremisses* AV flavialuca/Lucca; due $\frac{1}{8}$ *siliqua* AR con monogramma longobardo.
- Moneta in piombo di zecca episcopale/Luni: sei in tomba nel 1868 (con tre AV visti come *tremisses* AV longobardi).
- Moneta IX-X secolo: 1 denaro AR Ludovico il Pio con tempio tetrastilo e legenda *XPISTIANA RELIGIO*; ? denaro AR Ottone I e II/Lucca; ? denaro AR Ottone I-II-III/Pavia; ? denaro AR Berengario I/Pavia; danaro AR Ugo II e Giuditta di Toscana/Lucca (970-1002); follaro AE Mansone II/Amalfi-Salerno (981-983).

L'elenco è certamente incompleto e le monete segnalate possono essere state citate più volte, anche con lettura diversa. Per CALLEGHER 2002, p. 265 n. 7.23, relativo alle sole emissioni ravennati e non convinto circa l'esistenza della zecca “tirrenico-settentrionale”: $\frac{1}{2}$ *siliqua* AR Giustiniano/Ravenna (MIB 77), $\frac{1}{2}$ *siliqua* AR Giustiniano/Ravenna ([WROTH 1908], 67), cinque $\frac{1}{4}$ *siliqua* AR Giustiniano I/Ravenna (MIB 78-79), $\frac{1}{4}$ *siliqua* AR Giustiniano/Ravenna (tipo Sabatier I, 11), $\frac{1}{4}$ *siliqua* AR Giustino II/Ravenna, *tremisses* AV Giustino II/Ravenna ([WROTH 1908], 291), $\frac{1}{8}$ *siliqua* AR Tiberio II/Ravenna (MIB 22), *decanoummion* AE Tiberio II/Ravenna ([WROTH 1908], 164), *tremisses* AV Maurizio Tiberio/Ravenna, $\frac{1}{2}$ *folles* AE Maurizio Tiberio/Ravenna ([WROTH 1908], 283); *miliaresion* AR Eraclio/Ravenna (?) (MIB 153?), *folles* AE Eraclio/Ravenna (MIB 251-255), *folles* AE Eraclio/Ravenna (MIB 452).

Per BALDASSARRI 2021 (p. 128), limitatamente alle monete di area toscana: tremissi ai tipi di Maurizio Tiberio “di fabbrica molto barbara”; 2 tremissi “stellati” di Lucca.

Discovery of the find: discovery during archaeological investigations

(H) Luni, loc. Luni Scavi, area archeologica, cattedrale di santa Maria, scavi 1976 e 1990 (dep.: V sec. d.C.)

Le indagini archeologiche svolte dall'Istituto di Archeologia dell'Università Cattolica di Milano e dal Centro Studi Lunensi a partire dal 1976 nell'area della cattedrale di S. Maria di Luni, hanno permesso di riconoscere in tale zona della città l'esistenza di una vasta residenza signorile di età imperiale, sostituita nel corso del V secolo dalla grande chiesa paleocristiana. La *domus*, detta di *Oceanus* a motivo del pregevole pavimento musivo policromo con scena marina, messo in opera nel corso della parziale ristrutturazione dell'edificio alla fine del III secolo d.C. (periodo IV), conosce alla fine del IV una nuova organizzazione degli spazi (periodo V), forse in seguito a dissesti provocati da un evento sismico che colpì la città nella seconda metà del secolo. Si assiste in tale occasione anche alla stesura di nuovi pavimenti musivi, fra i quali si distingue quello – ridotto oggi a un piccolo lacerto – con raffigurazione di volatili affrontati, di cui resta solo la coda di un pavone. Molta stratificazione relativa a questa fase edilizia venne compromessa dalle trincee di scavo praticate alla fine dell'Ottocento, ma quanto ne rimane ha consentito di seguire le trasformazioni che, nel corso del V secolo, segnano il passaggio dell'area dall'edilizia privata a quella religiosa, concludendosi con la costruzione del primo impianto basilicale (periodo VI).

In due momenti successivi, ossia durante le campagne di scavo del 1976 e del 1990, all'interno di un vano mosaicato sottostante l'absidiola destra dell'edificio sacro, furono recuperate 29 monete in AE. Il primo gruppo (lotto A) comprendeva dodici esemplari (da B 338 a B 349), il secondo (lotto B) risultò invece costituito da 17 (da B 4170 a B 4186). Le modalità dell'occultamento e del ritrovamento permettono di affermare che il gruppo monetale costituiva all'origine un'unica deposizione, dalla composizione omogenea.

A causa del cattivo stato di conservazione del materiale, conseguente anche alle circostanze del loro recupero, soltanto 16 pezzi sono stati identificati con sicurezza. Sono risultate non catalogabili, se non per un ampio ambito cronologico, tre monete del lotto A – rinvenute in giacitura più superficiale – e dieci del lotto B.

Bibl.: PODESTÀ 1890; DURANTE 2001, p. 61; ARSLAN 2004i, n. 3385; PERASSI 2018 (per un esame completo del ritrovamento).

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(SiF) Albenga, chiesa e monastero di san Calocero al Monte, scavi 2014-15 (dep.: IV sec. d.C. (ma in associazione con materiali di VIII sec. d.C.))

Da scavi condotti nel 2014-15 dal Pontificio Istituto di Archeologia Cristiana, in occasione della seconda campagna di scavo avvenuta nel 2015, nella navata centrale della chiesa, in una posizione sostanzialmente frontale all'ambito dell'altare, tra le evidenze messe in luce subito al di sotto del livello umotico US 1000, è stata individuata una grande fossa (US-1012) con un diametro conservato di circa 70 cm, già parzialmente intaccata e disturbata dall'indagine condotta da Nino Lamboglia nel 1938.

La fossa era colmata da due potenti livelli di riempimento: il più superficiale (US 1011 = 1002) ha uno spessore di circa cm 40 ed è caratterizzato quasi esclusivamente da grossi elementi litici, di dimensioni decimetriche, i quali risultano fuoriuscire dal riempimento per una altezza superiore di qualche centimetro rispetto alla quota del piano di calpestio tardo medievale US 1001, evidenziando come l'azione del taglio della fossa e del suo riempimento siano successive al più recente livello pavimentale del monastero.

Tra i materiali del riempimento della fossa sono stati rinvenuti un frammento di un'epigrafe (probabilmente funeraria) databile al I d.C. e la porzione di un elemento decorativo liturgico a

motivi vegetali, databile all' VIII d.C. da confronti interni al San Calocero stesso. Dal secondo riempimento (US 1019) della fossa US-1012, costituito invece quasi esclusivamente da deposito terroso, è stata recuperata una moneta in lega di rame da attribuire, probabilmente, a Valentiniano I o a Valente (datazione 364-367; AE 3 tipo *Gloria Romanorum* di Valente, zecca di Aquileia) e, dunque, della seconda metà del IV secolo avanzato.

(SF) Finale Ligure, fraz. Finalborgo, piazza del Tribunale, n.s. (dep.: n.s)

In occasione degli scavi archeologici per recenti lavori nel centro abitato sono state rinvenute diverse monete genovesi. Da Piazza del Tribunale, reperti da contesti di XIII secolo.

US 4107: grosso di Genova «da 6 denari», con legenda CNRAD1REX• (*CNI* 3, nn. 101-103), 1,57 g, in associazione con una mezzaglia di Genova tipo CNRAD1REX (fine XII secolo), un denaro di Genova tipo CVNRAD1REX• (1210-1240 circa) e un denaro di Asti (metà XIII secolo circa).

Pero ODDONE 2022 (n. 13), i denari di Asti sono 4.

Segnalati anche:

- 1 denaro imperiale di Teodoro I Paleologo (1306-1338), zecca di Chivasso (SACCOCCI 2009c, p. 96 n. 2);
- 1 denaro imperiale di Manfredò II del Carretto databile al 1322 ca., zecca di Cortemilia (gr. 0,57; *CNI* 2, n. 4; MURIALDO 2003, p. 28);
- 1 anonimo del vescovo di Arles (gr. 0,35; MURIALDO 2003, p. 29);
- 1 denaro coronato di Sancho IV (1284-95), zecca di Burgos (gr. 0,72; MURIALDO 2003, p. 30);
- 1 piccolo modulo (obolo?) anonimo con raffigurazione del castello, di incerta attribuzione ma probabilmente di area spagnola (gr. 0,23; MURIALDO 2003, p. 30);
- 1 denaro gherardino di Carlo II d'Angiò, zecca di Napoli, databile al 1300-09 (gr. 0,49; MURIALDO 2003, p. 30);
- 1 pierreale di Federico III di Aragona (1296-1337), classe B3 (gr. 2,97; MURIALDO 2003, p. 30);
- 1 denaro di gruppo 3 di Federico III d'Aragona (1296-1337), zecca di Messina (gr. 0,55; MURIALDO 2003, p. 30);
- denari aquilini minuti della Repubblica di Pisa, datati tra il 1265 ca. e ante 1318 (MURIALDO 2003, p. 28);
- doppi coronati di Carlo II d'Anjou, zecca di Saint-Rémy de Provence, databili al 1298-1301 (MURIALDO 2003, pp. 29-30).

(SF) Finale, varie località non specificate, n.s. (dep.: VIII-XIX secc.)

Presso il Museo Archeologico del Finale di Finalborgo sono esposte c. 100 monete dei secc. VIII-XIX date come *rinvenute nel territorio finalese*.

Notate:

- monete bizantine
 - Costantino V con Leone IV (751-775);
 - Romano I (920-944);
 - *follis* anonimi di fine X – XI sec.
- del ducato di Normandia, del vescovado di Arles, della Contea di Provenza, del Regno di Francia, del Regno di Castiglia e Leon, del Regno di Castiglia e Aragona, del Regno di Cipro, del Ducato di Savoia, del Regno di Sardegna;
- delle zecche italiane di Arezzo, Asti, Bergamo, Casale Monferrato, Carmagnola, Castiglione delle Stiviere, Chivasso, Cortemilia, Firenze, Genova, Lucca, Messina, Milano, Montanaro, Napoli, Passerano, Pavia, Pisa, Pomponesco, Roma, Savona, Venezia.

Tra le zecche straniere, notata una moneta di Carlo V d'Asburgo della zecca di Gerona, monete svizzere di Ginevra e del Canton Ticino, tessere commerciali di Norimberga.

Per la zecca di Casale Monferrato, riconosciuti placca di Guglielmo Gonzaga duca (1575-87) e grosso col monte Olimpo di Ferdinando Gonzaga (1612-26).

Cons.: Finale Ligure, fraz. Finalborgo, Museo Archeologico del Finale.

Bibl.: MURIALDO 2003, pp. 27-31 (cita genericamente monete rinvenute nel Finalese: sono queste?). Materiali visti in teca in occasione di una visita in data 3/1/2023.

Discovery of the find: fortuitous discovery, unknown circumstances

(uns) Finalese, varie località, n.s. (ante 2003) (dep.: XII-XIV sec.)

In MURIALDO 2003, p. 28 si segnala il ritrovamento, in vari siti del Finalese non esplicitamente indicati, di 8 denari astensi a nome di Corrado II re di peso compreso tra 0,61 e 0,31 grammi (*CNI* 2, pp. 3-9, nn. 16-31, 56-59).

Sappiamo che un denaro di Asti è venuto alla luce a Finale Ligure, presso il *castrum* di

Sant'Antonio (v. ritrovamento n. 6533) e un altro sempre a Finale Ligure, fraz. Finalborgo, negli scavi di piazza del Tribunale (v. ritrovamento n. 6535). Mancherebbero però all'appello altri sei denari astensi, per i quali al momento non è però possibile stabilire con esattezza il luogo del rinvenimento.

Bibl.: MURIALDO 2003, p. 28; ODDONE 2022, n. 14 (dato come da *Finalborgo, piazza di S. Caterina*, cita per la presenza di monete di Asti).

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: urban settlement (oppidum, colony, town)

(D) Bergamo, via san Salvatore 12-14, Palazzo Locatelli, scavi 2010-11 (dep.: III sec. – inizio IV sec. d.C.)

Il progetto di una autorimessa su due livelli in via San Salvatore 12-14 a Bergamo, in Città Alta, sulle pendici orientali del colle di San Giovanni, ha portato allo scavo archeologico di un terrapieno tra il dicembre 2010 e il settembre 2011. L'area di cantiere è situata in piena corrispondenza del terrapieno, a pianta pentagonale irregolare (Catasto del Comune di Bergamo, Foglio 37, mappale 3897), contenuto da un potente muraglione lungo via San Salvatore e situato appena a nord di Palazzo Locatelli, di cui costituisce la pertinenza (mappale 839, databile alla fine del XVIII secolo, sorto su probabili preesistenze medievali). Le attività di ricerca sono iniziate nel 2002 con una serie di sondaggi preliminari che permisero il riconoscimento di strutture idrauliche di epoca romana e rinascimentale; alla fine del 2010 due ulteriori interventi confermarono i primi risultati evidenziando la struttura dell'Acquedotto Magistrale e una grossa fondazione muraria. Le prime testimonianze di un progressivo abbandono delle strutture monumentali della seconda fase romana sono fornite proprio dai riempimenti delle strutture idrauliche della vasca US 243, US 242, e della canaletta US 247, US 214.

Il nucleo di reperti monetali assomma a 149 esemplari in bronzo o mistura, 147 dei quali provenienti dal riempimento di abbandono US 242 della vasca scavata nella roccia US 243. Le rimanenti due monete vengono comunque attribuite al medesimo gruppo, in quanto rinvenute nel riempimento di abbandono US 217 del taglio US 218, che tagliava US 242 e che potrebbe essere

riconducibile a un tentativo di ripristinare l'utilizzo della vasca. I reperti di US 242 sono stati rinvenuti sparsi nel sedimento terroso, mai in gruppi, e senza un evidente ordine di deposizione che seguisse l'epoca di emissione; si è soltanto ravvisata una leggera prevalenza di antoniniani verso il fondo della vasca. Almeno il 25% delle monete è stato recuperato mediante la setacciatura integrale del deposito.

Le monete sono state interpretate come parte di una stipe votiva connessa a un rituale di offerta nelle acque che doveva svolgersi presso la vasca.

A parte due assi databili dal I al II secolo d.C. e con ogni probabilità da considerarsi residuali, l'offerta monetale ha come limiti cronologici le emissioni di Gallieno da solo e un AE2 databile tra 378 e 388 d.C. e può essere suddivisa in due macrogruppi:

- 73 antoniniani, per 65 dei quali è determinabile l'autorità emittente, dal regno di Gallieno da solo a Probo, e per 51 la zecca di provenienza;
- 74 bronzi che coprono il lasso temporale tra il 295 e il 388 d.C., per 69 dei quali è riconoscibile, a volte con qualche incertezza, l'autorità emittente e per 53 la zecca.

Secondo la periodizzazione di uso corrente per quanto riguarda le emissioni di epoca romana, l'intera stipe può essere così suddivisa:

- fino al 260 d.C.: 2 monete (1,34% del totale);
- dal 260 al 294 d.C.: 73 monete (49% del totale);
- dal 294 al 330 d.C.: 39 monete (26,18% del totale);
- dal 330 al 337 d.C.: 7 monete (4,70% del totale);
- dal 337 al 348 d.C.: 5 monete (3,35% del totale);
- dal 348 al 364 d.C.: 14 monete (9,40% del totale);
- dal 364 al 388 d.C.: 4 monete (2,68% del totale);
- esemplari non databili, o databili tra più fasi, attribuibili al IV secolo: 5 monete (3,35% del totale).

Riguardo l'epoca di formazione della stipe, se da un lato l'assenza di esemplari precedenti la crisi monetaria di età gallienica e l'accertato utilizzo prolungato dell'antoniniano più svilito (periodo dal 260 al 270 almeno) fino al VI secolo rendono gli antoniniani un semplice *terminus post quem*, la presenza di esemplari della prima tetrarchia di buon peso, soggetti a un ritiro a breve termine, potrebbe indicare come il rito sia documentabile a partire dai primi anni del IV secolo d.C.

Alcune delle monete esposte al Civico Museo di Bergamo (23 es. visti in occasione di visita del 3/11/2024):

- antoniniano di Gallieno per Salonina zecca di Roma, 259-268 d.C.;
- 2 antoniniani di Gallieno, zecca di Roma, 260-268 d.C.;
- antoniniano di Claudio II, zecca di Roma, 268-270 d.C.;
- antoniniano di Claudio II, zecca di Antiochia (?), 268-270 d.C.;
- antoniniano di Aureliano, zecca di Mediolanum, 270-275 d.C.;
- antoniniano di Aureliano, zecca di Cyzico, 270-275 d.C.;
- frazione di radiato di Massimiano per Costanzo I, zecca di Roma, 297-298 d.C.;
- frazione di radiato di Diocleziano per Galerio Massimiano, zecca di Roma (?), 279-298 d.C.;
- frazione di radiato di Diocleziano, zecca di Ticinum, 299 d.C.;
- frazione di radiato di Massimiano, zecca di Ticinum, 299 d.C.;
- frazione di radiato di Massimiano, zecca di Ticinum, 299 d.C.;
- follis di Massenzio, zecca di Ostia, 309-312 d.C.;
- follis di Licinio I, zecca di Londinium, 310-312 d.C.;
- follis leggero di Costantino, zecca di Treviri, 310-313 d.C.;
- follis di Costantino, zecca di Roma, 314 d.C.;
- follis di Licinio I per Licinio II, zecca di Arelate, 317-318 d.C.;
- follis di Costantino, zecca di Ticinum, 318-319 d.C.;
- follis di Licinio I, zecca di Aquileia, 321 d.C.;
- follis di Costantino e figli, zecca di Lugdunum, 333-334 d.C.;
- bronzo di Costanzo II, zecca incerta, 348-361 d.C.;
- bronzo di Costanzo II, zecca di Siscia, 350-354 d.C.;

- bronzo di Valentiniano I, zecca di Siscia, 367-375 d.C.

Il confine col sedime del palazzo costituiva il limite meridionale del cantiere, mentre a ovest è presente il complesso del Seminario Vescovile, edificato, nelle forme attuali, negli anni Sessanta del XX secolo. I limiti N ed E sono costituiti da un muraglione di rivestimento del terrapieno: a settentrione confina con una proprietà privata, a oriente con il primo tratto ascensionale di via san Salvatore che da piazza Mascheroni si dirige, con una decisa pendenza, all'incrocio con via Salvecchio e vicolo della Mura di santa Grata. L'inclinazione della strada (che sale di 6 m c. da NW a SE) faceva sì che all'atto dell'inizio dei lavori di scavo il piano di calpestio del cantiere risultasse sopraelevato rispetto alla via San Salvatore di 7 m c. allo spigolo NE e di poco più di 3 m al limite SE. A seguito di mutate esigenze della committenza, l'indagine archeologica si è interrotta senza l'esaurimento delle indagini.

Questa cospicua presenza di monete, altrimenti assenti nel resto dello scavo, all'interno di una probabile struttura idraulica, ha portato a ipotizzare che US 243 fosse una struttura di servizio di una fonte o di una fontana, presumibilmente collegata al muraglione US 277, dove venivano svolte attività legate al culto (*iactatio stipis*), ovvero la deposizione cultuale di piccoli nominali in bronzo in acqua. A un orizzonte rituale sembra collegarsi anche la porzione di coppa in vetro inciso proveniente da US 214.

Cons.: Bergamo, Civico Museo Archeologico (23 es. visti in esposizione il 3/11/2024).

Bibl.: FORTUNATI, MALASPINA 2022 (per inquadramento generale dello scavo e informazioni preliminari sui ritrovamenti monetari); ASOLATI, MALASPINA 2022 (per analisi più dettagliata dei ritrovamenti monetari). Da visita al Civico Museo Archeologico di Bergamo del 3/11/2024.

(SF) Calcinate, loc. Campo Musna, n.s. (dep.: secc. XII-XVIII)

Negli scavi condotti a Calcinate, loc. Campo Musna, sono emerse 13 monete romane e 4 di età

medievale e moderna. La loro classificazione appare problematica a causa del loro pessimo stato di conservazione.

- monete di età romana

- gli esemplari leggibili si scalano dal II/I secolo a.C. ad almeno la prima metà del IV secolo d.C. due assi repubblicani, uno da ricognizione di superficie e l'altro da US 17, insieme a un denario di *C. Egnatuleius C. f. quaestor*, databile al 97 a.C. (RRC 333/1, zecca di Roma), sono probabilmente da assegnare alle prime fasi di frequentazione dell'area.

- monete di età medievale e moderna

- denaro MI, zecca di Acqui Terme (?), 0.28g, 17mm (CNI 2, p. 2 nn. 6-7);
- quattrino AE, Maria Teresa d'Asburgo (1740-80), emissione ascrivibile al 1777-79, 1.5g, 17 mm (CNI 5, nn. 100-102);
- altre 2 es. non altrimenti classificabili (su uno è rilevabile una traccia di croce fogliata: forse esemplare della zecca di Milano di età viscontea?).

(SF) Calcinatè, loc. Villa Passa, n.s. (dep.: II sec. a.C. – seconda metà IV sec. d.C.)

In quattro sepolture di Calcinatè, loc. Villa Passa, i corredi comprendevano monete. Nelle tombe a incinerazione 1, 2 e 3 le monete non presentano tracce di esposizione al rogo e, dunque, facevano parte del corredo secondario, disposto presso i resti combusti nel sepolcro. Nella sepoltura 6, a inumazione, le monete erano deposte accanto al corpo del defunto.

- tomba 1 (femminile, a cremazione, in cassa di laterizi, del I sec. a.C.): 4 assi e 1 trienti di età romana repubblicana;
- tomba 2 (femminile, a cremazione, in cassa di laterizi, della II metà del I sec. a.C.): 1 asse e 2 semissi di età romana repubblicana;
- tomba 3 (a cremazione, fine I-inizio II sec. d.C.): 1 asse di Vespasiano, 1 asse di Tito, 1 dupondio di Domiziano, 1 asse o dupondio non identificato ma databile al I-II sec. d.C. (Vespasiano?);
- tomba 6: 12 tra AE2 e AE3 databili al IV sec. d.C. (1 es. di Costantino o figli, 4 es. di Costanzo II, 2 es. di Giuliano, 1 es. di Valente, 1 es. di Valentiniano II, 3 es. non identificabili ma riferibili alla seconda metà del IV sec. d.C.).

Al Civico Museo di Bergamo esposte anche 5 monete (1 asse di Domiziano dell'85 d.C., 4 illeggibili) date come provenienti dalla stessa area, scoperte in fossette rituali rinvenute in prossimità delle tombe.

Cons.: Bergamo, Civico Museo Archeologico (viste in esposizione le monete delle tombe 1-3 e delle fossette rituali in occasione di visita del 3/11/2024).

(H) Cisano Bergamasco, fraz. Chiaravalle, 5 maggio 1922 (dep.: post 1254 (c. 1270 per STAHL 2000, p. 443 n. 60; c. 1300 per MEC 12, p. 673 n. 11))

Ripostiglio, con 260 AR+BI in totale, in prevalenza di zecche dell'Italia settentrionale, emessi tra XII e XIII secolo.

VINCENZI 1922, p. 157: *Il 5 maggio 1922, l'agricoltore Tommaso Mazzoleni, abitante in frazione Chiaravalle del Comune di Cisano (provincia di Bergamo), nel tracciare un fosso in un suo campo, rinveniva in un ciottolo d'arenaria, scavato a scodella e ricoperto d'argilla, un mucchietto di monete d'argento. Ne portò alcune, qualche giorno dopo, al Medagliere milanese nel Castello Sforzesco, onde averne la stima, e di buon grado consegnò poi tutto il ripostiglio a quesro Istituto, a disposizione della Sovrintendenza degli Scavi e Musei Archeologici di Lombardia, quando seppe delle disposizioni di legge sulle Antichità e Belle Arti, riguardanti i ritrovamenti nel sottosuolo. C'è ragione di ritenere – anche per altre constatazioni di fatto – che il ripostiglio abbia conservato la sua integrità di formazione.*

Composizione:

- zecca di Venezia: 4 grossi di Jacopo Tiepolo (1229-49), 3 grossi di Marino Morosini (1249-13) e 22 grossi assai poco circolati di Ranieri Zeno (1253-68);
- zecca di Bergamo: 48 denari scodellati e 44 denari piani (1236 – c. 1300);
- zecca di Milano: 3 denari e 1 obolo a nome di *henricvs* dei secc. XII-XIII, 16 denari imperiali scodellati a nome di *fredericvs* (c. 1230-1250), 7 denari imperiali piani a nome di *fredericvs* (1254/6-1298), 62 grossi ambrosini piccoli (c. 1254/6-1310), di cui almeno 2 ridotti (1298/9-1310);
- zecca di Brescia: 10 grossi di tipo veneziano (1258-98/9);
- zecca di Piacenza: 6 denari imperiali e 3 grossi con la crocetta tra i due globetti (• + •), ipotizzati anteriori al concordato del 1253 (per MEC 12, p. 673 i grossi sono da 6 denari imperiali);
- zecca di Pavia: 1 grosso da 6 denari con stelle (post 1254), e 7 denari a nome di *fredericvs* (principalmente post 1220);
- zecca di Cremona: 5 denari mezzani con steòde post concordato 1254;
- zecca di Tortona: 4 grossi a nome di *fredericvs* (post 1254);
- zecca di Como: 1 denaro mezzano con *O croxato* (1251/3);
- zecca di Ivrea: 1 denaro imperiale scodellato (seconda metà XIII secolo);
- zecca di Coira: 1 denaro imperiale scodellato del vescovo Heinrich III di Montfort

(1251-72);

- zecca di Genova: 11 grossi «da 4» del tipo + •I•A•NV•A• / CVNRAD1•REX• (*CNI* 3, p. 12 n. 81; per *MEC* 12, p. 673 post 1236).

Nei riferimenti bibliografici, in particolare al *CNI*, riportati in VICENZI 1922 si osservano occasionalmente delle incoerenze, dovute probabilmente a refusi tipografici.

Cons.: Milano, Civiche Raccolte Numismatiche.

Per *MEC* 12, p. 673: 260 AR/B, on deposit in the Civiche Raccolte Numismatiche, two more than in the original description of Vincenzi).

Rizzonelli (2021, p. 278) riporta invece che l'insieme di monete, custodito presso il gabinetto numismatico del Castello Sforzesco fin dalla data del suo ritrovamento, era composto originariamente da 260 esemplari. Dalla documentazione d'archivio si evince che 252 esemplari vennero acquistati dall'istituto, mentre altri 8, costituiti da grossi della zecca di Brescia, vennero riconsegnati al trovatore e dispersi sul mercato.

(H) Covo, castello, n.s. (XV sec.?) (dep.: n.s.)

In MORBIO 1870, pp. 171-172, si fa riferimento ad alcuni manoscritti originali nei quali compaiono cenni a ritrovamenti di monete. In uno di questi manoscritti si riporta che un certo maestro Fermo di Covo, professore di grammatica, avrebbe comunicato al duca di Milano che in una casa del castello di quel comune Domenico Tadiolo aveva trovato *alcuna quantitate de dinari, a la summa de ducati VCCC*, nascosti in precedenza da una sua antenata di nome Giovanna.

Nessuna indicazione sulla natura delle monete né sull'epoca della scoperta, ma per il Morbio (cit., p. 172) il documento che riporta la notizia sarebbe da datare *certamente* alla seconda metà del XV secolo.

Discovery of the find: discovery during archaeological investigations

(H) **Braone, di fronte al civico di via Somnavilla 13, fine novembre 1956** (*dep.:* tra il 490/3 (per BIERBRAUER 1974) e il 518)

Il ripostiglio fu rinvenuto a Braone, nella media Valle Camonica, alla fine del mese di novembre del 1956, durante lavori di posa del nuovo acquedotto comunale, di fronte al numero civico 13 di

via Somnavilla. In quell'occasione, a circa 1-1,2 m di profondità, furono rinvenute alcune strutture in sassi e laterizi legati da malta e ossa umane, interpretate come i resti di una tomba a inumazione (già manomessa in antico), oltre a un contenitore in piombo al cui interno erano alcune monete d'oro, subito disperse fra gli operai. Grazie all'intervento del Comando dei Carabinieri di Breno, coadiuvato dall'ispettore onorario Giuseppe Bonafini, la Soprintendenza alle Antichità della Lombardia fu in grado di recuperarne nove.

Le vicende successive al rinvenimento non consentono di avere la certezza che quanto conservato corrisponda all'intero ripostiglio, anche se è inverosimile che il numero delle monete fosse di molto superiore, date le piccole dimensioni del contenitore.

Allo stato attuale, comunque, il ripostiglio è composto da nove solidi:

- 4 Leone I, zecca di Costantinopoli;
- 1 Zenone, zecca di Costantinopoli;
- 1 Zenone, zecca di *Mediolanum*;
- 2 Anastasio, zecca di Costantinopoli;
- 1 Anastasio con Teodorico.

C'è disaccordo sulla data di occultamento, ragionevolmente da collocare tra il 497-498 (il riconoscimento imperiale del ruolo di Teodorico nel governo della *pars Occidentis*) e il 518 (anno della morte di Anastasio).

Cons.: Parzialmente disperso, solo 9 es. sopravvissuti, oggi presso il Museo Archeologico Nazionale della Valle Camonica di Cividate Camuno.

(SF) Breno, loc. Spinera, santuario di Minerva, n.s. (dep.: n.s.)

in località Spinera di Breno, in un pianoro ai piedi di uno sperone roccioso con grotte e cunicoli scavati dall'acqua, santuario di età romana dedicato alla dea Minerva, costruito su area rituale preesistente risalente alla fine del IV sec. a.C. Nel corso degli scavi sono emerse svariate monete, databili tra il I sec. e il V sec. d.C.

La moneta più antica è un sestante del 91 a.d.C. Notato asse di Domiziano dell'85 d.C. rinvenuto all'interno dello strato che segna la fine dell'utilizzo del santuario preromano.

I tipi individuati suggeriscono l'associazione del culto a Minerva con quello imperiale ad Augusto divinizzato.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: burial, unknown context

(H) Brescia, via Boifava, maggio 1934 (dep.: II-III sec. d.C.)

A Brescia, nel maggio 1934, alcuni operai addetti ai lavori di sterro per la costruzione di una villa in via Boifava, ai piedi delle colline che circondano la città, scoprirono una lastra di pietra lavorata, avanzo di un movimento sepolcrale. Avvertita la Soprintendenza alle Belle Arti, i lavori proseguivano sotto la direzione di personale tecnico e portavano alla luce una tomba romana che,

da un primo esame degli oggetti rinvenuti, sembrava aver contenuto i resti di un guerriero cremato e interrato tra II e III sec. d.C.

Nella tomba erano presenti 10 monete di Antonino il Pio, insieme ad altri oggetti, tra cui alcuni vasi di vetro *di eleganza davvero ammirevole*, ampole, un pezzetto d'ambra, una lucernetta con sigla *vimani*, unitamente a frammenti metallici ricondotti all'impugnatura di uno stiletto a altri pezzi d'armi.

(SF) Calvisano, fraz. Mezzane, nei pressi della chiesa di san Salvatore, necropoli, 1998 (dep.: secondo trentennio – seconda metà del VII sec.)

Vicino alla chiesa di san Salvatore, a nord-est dell'abitato, durante i livellamenti di un campo (1947), venne distrutto un cimitero che doveva comprendere qualche decina di sepolture, orientate est-ovest, con copertura alla cappuccina o a lastre di pietra. In alcuni casi le pareti erano internamente intonacate e decorate con croci dipinte e/o incise. Il solo oggetto di corredo ricordato è una croce in lamina d'oro (perduta).

Nel 1988, nella stessa area, lungo il limite sud della necropoli distrutta nel 1947, sempre nel corso di lavori agricoli, emersero altre 3 tombe, una bisoma, maschile e femminile, sul bacino della donna era deposta una moneta (viatico), vicino all'uomo, un pettine in osso a doppia dentatura, un coltellino, guarnizioni da cintura multipla in ferro ageminato decorate in stile zoomorfo stilizzato. Secondo trentennio-seconda metà del VII secolo.

(SF) Gussago, necropoli, n.s. (dep.: n.s.)

Monete romane in tomba, esclusivamente in lega di rame, solo 66 sepolture su 186, pari al 34,9% (se consideriamo solo le tombe che avevano elementi di corredo, tale percentuale sale al 39%). Il tasso di leggibilità è estremamente basso a causa delle cattive condizioni di conservazione. Alcuni esemplari appaiono combusti e/o corrosi in modo tale che ne rimane solo il nucleo o parte del nucleo del tonello, totalmente privo di qualsiasi traccia della superficie coniatata.

Segnalate:

- tomba 5.2: sesterzio di Faustina maggiore (Roma, post 141), *RIC* 3, p. 162 n. 1105;
- tomba 49.3: asse di Tiberio per il Divo Augusto (Roma, 22/23-(?)30), *RIC* 1 (2), p. 99 n. 81;
- tomba 81.3: asse di Tiberio per il Divo Augusto (Roma, 22/23-(?)30), *RIC* 1 (2), p. 99 n. 81;
- tomba 111.5: dupondio di Tito (?);
- tomba 111.6: asse di Tito (Lugdunum, 77-78), *RIC* 2 (2), p. 148 n. 1268;
- tomba 143.1: asse a nome di Lucilla (Roma, 164-169), *RIC* 3, p. 353 n. 1757;
- tomba 143.2: sesterzio di Marco Aurelio (Roma, 161-180);
- tomba 143.3: sesterzio a nome di Faustina minore (Roma, 161-176);
- tomba 143.5: asse di autorità non identificata;
- tomba 143.6: moneta illeggibile;
- tomba 144.8: asse di autorità non identificata;
- tomba 144.11: sesterzio a nome di Faustina minore (Roma, 161-176), *RIC* 3, p. 345 n. 1649;
- tomba 144.14: moneta illeggibile;
- tomba 148.1: dupondio di Adriano (Roma, 119-121), *RIC* 2, p. 417 n. 599;
- tomba 148.2: moneta illeggibile;
- tomba 163.5: dupondio di Domiziano (Roma, 87), *RIC* 2 (2), p. 302 n. 537;
- tomba 164.9: asse di Tiberio (Roma, 22/23-(?)30), *RIC* 1 (2), p. 99 n. 81;
- tomba 168.4: asse di Claudio (Roma, 41-54), *RIC* 1 (2), p. 128 n. 100 o p. 130 n. 116;
- tomba 168.6: moneta illeggibile;
- tomba 168.7: moneta illeggibile;
- tomba 169.1: asse di Claudio (Roma, 41-54), *RIC* 1 (2), n. 97 o 113;
- tomba 180.1: semisse di autorità non identificata (Roma, seconda metà II-inizi III sec.);
- tomba 180.3: asse di Giulia Mamea (Roma, 225-235);
- tomba 180.4: asse di autorità non identificata;
- tomba 180.5: semisse di Marco Aurelio (Roma, 176-180), *RIC* 3, p. 349 n. 1704;
- tomba 180.6: asse (?) di autorità non identificata;
- tomba 180.7: asse o dupondio di autorità non identificata;
- tomba 181.1: semisse di autorità non identificata;
- tomba 181.2: asse o dupondio di autorità non identificata;
- tomba 181.3: semisse di Marco Aurelio a nome della Diva Faustina (Roma, 176-180), *RIC* 3, p. 349 n. 1702;
- tomba 181.5: asse o dupondio di autorità non identificata;
- tomba 181.7: dupondio di autorità non identificata (Roma, seconda metà II-inizi III sec.);
- tomba 182.13: sesterzio di Commodo (Roma, 186), *RIC* 3, p. 420 n. 462.

Le sepolture con monete sono più frequenti nella porzione centro meridionale della necropoli, dove si concentrano anche quelle con più pezzi. Se in 52 casi le tombe contenevano una sola

moneta, in 14 erano presenti più esemplari: 6 sepolture ne avevano 2 (tombe 11, 22, 111, 112, 137, 148), 5 ne contenevano 3 (tombe 15, 136, 142, 144, 168), due ne conservavano 5 (tombe 143 e 181) e solo nel corredo dell'incinerazione tomba 180 ne erano comprese 6. Significativamente, in questi ultimi tre casi, si tratta di deposizioni posteriori alla metà del II secolo.

(SF) Leno, fraz. Milzanello, scavi 1885 (dep.: fine VI sec. – VII sec. inoltrato)

Nel corso di sterri (1885), in un terreno a nord-est del paese, si rinvennero tombe longobarde (distrutte), relative a cinque-sei individui. I materiali recuperati sono: un umbone di scudo da parata, con borchie e decorazione della calotta di bronzo dorato a quattro bracci terminanti in teste di rapace, tre spade, due punte di lancia ad alette, una fibbia in ferro, frammenti di cesoie, due brocche in ceramica ad impasto rosato e a stralucido, sei monete tardo-romane in bronzo forate e utilizzate come pensagli, due acciarini, quattro *scramasax*, coltelli.

V. anche ritrovamento n. 6615 (stesso ritrovamento con dati errati?).

Cons.: Brescia, Musei di Santa Giulia (esposte sei monete). I corredi degli inumati, costituiti prevalentemente da armi, giunsero solo in parte al Museo alla fine del XIX secolo.

Bibl.: CALDERINI 1974, p. 1120; DE MARCHI 2018, p. 496. Da visita ai Musei di Santa Giulia di Brescia il 4/1/2024.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(SF) Lozio, fraz. Villa di Lozio, casale Somma Prada, aprile 1889 (dep.: V-VI sec. d.C.)

Nell'aprile 1889, nei terreni del casale Somma Prada, della frazione Villa di Lozio presso Santa Cristina, nel praticare lavori agricoli furono scoperte e distrutte alcune tombe con struttura e copertura di lastre di pietra. Gli oggetti dei corredi andarono dispersi, tranne quelli di una sepoltura bisoma altomedievale (V-VI sec.) di un adolescente e di una donna, che furono recuperati con più attenzione.

Furono recuperate due monete: una di Tiberio (14-37 d.C.) e una di età costantiniana, oggi perduta.

Nell'aprile 1890 furono messe in luce altre quattro tombe, molto vicine una all'altra, da cui furono raccolti oggetti di corredo in parte simili a quelli della tomba dell'anno precedente. Le tombe sono riferibili a una piccola comunità che viveva nelle vicinanze tra il V e il VI secolo.

Cons.: La moneta di Tiberio presso il Civico Museo Archeologico di Bergamo, l'altra di età costantiniana dispersa.

Bibl.: MANTOVANI 1889; MANTOVANI 1893; MANTOVANI 1896; BASERGA 1915, p. 95; [PAUTASSO 1973], pp. 169-179; [DE MARCHI 1988], p. 63, nota 2 (cita Mantovani); [RIEMER 2000], p. 329 (in tomba doppia del V-VI secolo).

Da visita presso il Civico Museo Archeologico di Bergamo del 3/11/2024.

(SF) Nave, n.s. (dep.: 50-100 d.C.)

Presso il comune di Nave venne scoperta nel 1978 una necropoli esterna all'abitato e disposta lungo la strada moderna, che ripercorre probabilmente una via di età romana. Furono individuate 52 tombe, databili tra la seconda metà del I sec. a.C. e la fine del I sec. d.C., pertinenti ad alcuni nuclei familiari che utilizzarono l'area per circa quattro generazioni.

- tomba 9 (sepoltura a cremazione indiretta donna adulta di 21-40 anni)
 - 10 monete in bronzo, nove delle quali collocate nell'urna di vetro contenente i resti ossei cremati;
- tomba 22 (sepoltura a cremazione di giovane donna di 12/13-21 anni)
 - 3 monete di Tiberio databili tra il 22-23 e il 30 d.C.

(SF) Vorzano Leno, Campo Marchione, necropoli, n.s. (dep.: n.s.)

Da necropoli longobarda, con 247 tombe, diverse sepolture che hanno restituito monete romane forate. In dieci sepolture femminili della prima fase della necropoli segnalate da 1 a 8 monete forate nella stessa tomba (il massimo di 8 raggiunto nella t. 123). Una moneta forata anche in una tomba maschile di questa fase e una in un'altra della terza fase.

Più in dettaglio, nella t. 152: appesi alla cintura dell'abito della defunta, o al più racchiusi in una borsetta, vi erano piccoli elementi in bronzo, tra cui due monete romane forate; numerose laminette d'argento punzonate rivestivano nastri sospesi alla cintura; segnalata anche collana, con infilati anche quattro minuti pendenti in oro, unici reperti aurei di tutta la necropoli.

Nature of the site at the time of concealment or loss: burial, unknown context

(SF) Campione d'Italia, oratorio di san Zeno (san Zenone), scavi 1996-97 (dep.: n.s.)

Scavi stratigrafici (1996-97) condotti nell'oratorio nobiliare di S. Zeno, citato in documenti di VIII-IX secolo, documentano la fase edilizia più antica composta dall'oratorio e dall'adiacente mausoleo familiare. Nel mausoleo si distinguono due sepolture a cassa in lastre di pietra: la prima (t. 10) conteneva gli scheletri di una donna e di un infante, un *1/8 siliqua* AR longobarda con monogramma di Pertarito (672-688), fili aurei di broccato, un amuleto fallico in pietra; la seconda (t. 11), più scheletri (maschili, femminili, di bambino), un paio di orecchini a cestello in oro, con perle, almandini e un pendente in vetro (inoltrato VII secolo), un anello digitale aureo, con castone contenente un pasta vitrea blu (lapislazzulo?), fili aurei da broccato e frammenti di mica. In ARSLAN 2004i, n. 3580 si segnala anche moneta di IX-X secolo: denaro AR Ottone II o III/Milano (CNI 5, p. 44 n. 7 ss.). Da diversa campagna di scavo?

Cons.: Milano, Civico Museo Archeologico.

Bibl.: ARSLAN 1998c, p. 444; MURIALDO 2003, p. 27 (cita la frazione di siliqua longobarda con monogramma di Pertarito); ARSLAN 2004; ARSLAN 2004i, n. 3580; ARSLAN 2005; DE MARCHI 2005, p. 115, nota 55 (cita la frazione di siliqua longobarda con monogramma di Pertarito); ROVELLI 2005; SACCOCCI 2005, p. 113 e nota 51 (lo dà come Ottone I-II), p. 120 n. 38; DE MARCHI 2018, pp. 469-470.

(H) Cermenate, 1928 (dep.: c. 1350)

Ripostiglio rinvenuto nel 1928 durante i lavori di demolizione di un'abitazione a Cermenate di proprietà di Luigi Dubini.

L'unica testimonianza riguardante il ritrovamento, accompagnata da una sommaria descrizione degli esemplari che lo componevano, è stata pubblicata da Giovanni Baserga (1928a). Il ripostiglio doveva originariamente essere trimetallico e composto da circa quaranta monete, di cui la metà *subito disperse tra i lavoratori* (BASERGA 1928a, p. 202). Di seguito l'autore relaziona le restanti venti monete:

- 1 ducato AV, doge Andrea Dandolo (1343-1354), zecca di Venezia;
- 12 grossi AR, Azzone Visconti (1330-1339), zecca di Milano;
- 7 sesini MI, Giovanni Visconti (1349-1354), zecca di Milano.

L'accuratezza della descrizione, fin nei particolari dei segni di interpunzione delle scritte, permette di supporre che Giovanni Baserga avesse avuto visione diretta delle monete. Tuttavia egli non riferisce circa il luogo o l'istituzione presso cui sono state depositate.

La condizione di incompletezza del ripostiglio non permette di poter proporre una data di chiusura certa. Sulla base degli esemplari di cui si possiede la descrizione, essa può essere collocata nell'ambito degli anni '50 del XIV secolo, per la compresenza del ducato di Andrea Dandolo e dei sesini di Giovanni Visconti.

Cons.: Disperso.

Bibl.: POZZI 1993, p. 41 n. 40.4; CHIARAVALLE 2006, p. 101; ASOLATI 2009, p. 150 nota 33 (cita per la presenza del ducato di Venezia); MEC 12; PERASSI, BONA 2017.

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(SF) Como, loc. Santa Marta, 1913 (dep.: n.s.)

I lavori di ampliamento della stazione ferroviaria di San Giovanni in Como (1913), presso l'antico convento di santa Maria, permisero di scoprire numerose tombe romane e altomedievali (non interamente scavate). Le sepolture avevano muretti in pietre e cotto, lastre di Moltrasio e di marmo, tegoloni romani con riutilizzo di epigrafi. Le coperture erano piane o alla cappuccina. Si recuperarono pochi oggetti dei corredi (dispersi), tra cui recipienti in vetro e terracotta, armille a estremità aperte e ingrossate, chiodi in ferro e monete di III-IV secolo.

(SF) Como, piazza Grimoldi, chiesa di san Giacomo, n.s. (ante 2018) (dep.: III-XIX sec.)

Nel corso delle indagini archeologiche in piazza Grimoldi, 12 monete databili dalla seconda metà del III alla fine del XIX secolo. La maggior parte di esse è stata rinvenuta fuori da contesti stratigrafici e si presenta in pessimo stato di conservazione, tanto che solo una parte di esse risulta identificabile.

Solo due unità stratigrafiche hanno restituito monete:

- US 20, strato di macerie che copre i resti delle strutture esterne sul lato settentrionale della chiesa di san Giacomo;
- US 30, strato che presenta i caratteri di un dark layer e la cui interpretazione appare complessa in considerazione dell'esigua superficie indagata all'interno del saggio 3.

In entrambi i casi, la genesi degli strati rende possibile che le monete siano in giacitura secondaria

e che, pertanto, non offrano elementi cronologici se non un generico termine post quem.

Composizione:

- US 20 s1
 - denaro MI, zecca di Milano, XIV secolo (St. 19.S288-4.1080; RR3);
 - denaro MI, zecca di Milano, XIV secolo (St. 19.S288-4.1081; RR9);
 - 3 nominali non identificati;
- US 30
 - Antoniniano, Gallieno, zecca di Mediolanum, 260-268 (*RIC* 5, 1, p. 174, n. 495; St. 19.S288-4.1079; RR12);
- pulizia
 - AE3 di imperatore non identificabile (IV sec. d.C.);
 - trillina MI, Gian Giacomo Trivulzio, zecca di Roveredo/Mesocco, 1487-1518 (*CNI* 4, pp. 438-441, nn. 135-158; St. 19.S288-4.1086; RR2);
 - 1 centesimo 1895, Umberto I di Savoia, zecca di Roma (St. 19.S288-4.1089; RR23);
 - 2 nominali non identificati;
- sporadico
 - AE non identificato (St. 19.S288-4.1090; RR4).

(H) Como, via Armando Diaz, sotto l'ex teatro Cressoni, 5 settembre 2018 (*dep.:* c. 472-474 d.C., o poco dopo)

Ripostiglio contenuto in un recipiente di pietra ollare di forma inedita, contenente esattamente 1.000 solidi AV di età romana tardo-imperiale, da scavi per la realizzazione di una palazzina con appartamenti e box sotto l'ex teatro Cressoni di Como in via Diaz, in pieno centro storico.

Notate monete degli imperatori Arcadio (395-408), Onorio (393-423), Valentiniano III (425-455), Maggioriano (457-461), Leone I il Trace (457-474), Libio Severo (461-465), Antemio (465-472) e Anicio Olibrio (472).

Segnalata anche una barretta d'oro e gioielli.

Le monete sono state prese in consegna dalla Soprintendenza per i Beni Archeologici per le province di Como, Lecco, Monza e Brianza, Pavia, Sondrio e Varese, che ne ha curato i lavori di pulitura.

(H) Como, via Tommaso Petri, 1890 (dep.: 1385-87)

Ripostiglio con c. 6.000 AR+BI rinvenuto durante i lavori per l'apertura di una nuova strada, via Tommaso Petri. I materiali sono databili intorno alla fine del XIV secolo, per *MEC* 12, p. 673 l'occultamento dovrebbe essere avvenuto all'incirca nel 1385-87.

Composizione:

- zecca di Milano
 - 1 denaro enriciano;
 - 5 denari imperiali (2 Enrico VII di Lussemburgo, 1310-13; 3 Ludovico IV di Baviera, 1314-46, ma conciati intorno al 1326-30);
 - c. 551 denari imperiali di età viscontea (17 Azzone Visconti, 1329-39; 14 Luchino Visconti, 1339-49; 7 Giovanni Visconti (1349-54; c. 350 incerte, 1329-54; 150 Bernabò Visconti, 1354-85);
 - 55 quattrini (Azzone Visconti);
 - 1.481 grossi pegioni (418 Bernabò e Galeazzo Visconti, 1354-78; 23 Galeazzo Visconti, 1354-78; 185 Bernabò Visconti, 1354-85; 855 Gian Galeazzo Visconti, 1385-1402);
 - oltre 3.006 sesini (1 Bernabò e Galeazzo Visconti; 1 Galeazzo Visconti; 4 Bernabò Visconti; oltre 3.000 Gian Galeazzo Visconti);
- zecca di Como
 - 52 denari imperiali;
- zecca di Pavia
 - 633 grossi pegioni (Galeazzo II e Gian Galeazzo Visconti, 1359-1402);
- zecca di Verona
 - 4 denari (2 Cangrande e successori, 1312-36 o 1349-78); 2 Antonio della Scala, 1381-87);
 - 2 quattrini (Bartolomeo e Antonio della Scala, 1381-87);
 - un numero imprecisato – ma grande – di sesini (Gian Galeazzo Visconti, 1387-1402);
- zecca di Alessandria
 - 3 denari col busto di san Pietro (XIV secolo);
- zecca di Ancona
 - 4 denari (XIV secolo);
- zecca di Ascoli
 - 1 denaro (XIII-XIV secolo);
- zecca di Bologna
 - 1 denaro (XIII-XIV secolo);
 - 2 denari papali (Gregorio XI, 1370-76);
- zecca di Ferrara
 - 1 quattrino (Nicolò d'Este, 1361-88);
- zecca di Genova

- 1 denaro (XIII-XIV secolo);
- zecca di Padova
 - 3 quattrini (1355-1405);
- zecca di Parma
 - 1 picciolo
 - 9 denari papali (Giovanni XXII, 1316-34, ma conati nel 1326);
- zecca di Venezia
 - 1 soldino (Andrea Contarini, 1368-82);
- zecche dei Savoia
 - 2 denari comitali (XIV secolo);
- zecca di Berna
 - 3 BI della Repubblica di Berna (XIV secolo);
- zecca della Boemia
 - 1 denaro di re Giovanni di Boemia (1310-46);
- zecca incerta
 - 1 denaro papale (Giovanni XXII).

Forse anche monete di Chivasso?

(H) Lenno, 1940 (per CRIPPA 1986) o 1941 (per DAY 2005 e MEC 12, p. 676) (dep.: c. 1390-1400)

Ripostiglio, con 632 AR+MI (598 identificati, 34 sconosciuti).

Composizione (solo i pezzi identificati):

- Genova, 3 petachine con legenda *CIVITAS IANVE* (XIV secolo);
- Milano, 207 grossi pegioni (5 Galeazzo II e Bernabò Visconti, 1354-78; 202 Gian Galeazzo Visconti, 1385-1402); 225 soldi *duodesini* (Gian Galeazzo Visconti); 111 sesini (17 Galeazzo II e Bernabò Visconti; 94 Gian Galeazzo Visconti);
- Pavia, 5 grossi pegioni (Galeazzo II Visconti, 1359-78; Gian Galeazzo Visconti);
- Verona, 45 soldi (Gian Galeazzo Visconti, 1387-1402);
- Berna, 2 *vierer*, post 1384.

Tra le monete della zecca di Milano si registrano in dettaglio 196 grossi pegioni e 124 soldi di Gian Galeazzo Visconti del tipo con croce gigliata e Sant'Ambrogio; i sesini di Gian Galeazzo Visconti sono sia del tipo croce/biscia che del tipo elmo con cimiero/croce.

Le denominazioni degli esemplari di Milano e Verona proposti nella letteratura meno recente sono da aggiornare. I "grossi" sono in realtà tutti *pegioni*, mentre i "soldi" di Gian Galeazzo Visconti sono invece da identificare coi *duodesini* da 8 denari imperiali. Alcuni dei "sesini" a nome

di Galeazzo II e Bernabò Visconti potrebbero inoltre essere dei *quattrini* da 4 denari imperiali. Per Verona i "sesini" in realtà sono *soldi*.

Cons.: Milano, Civiche Raccolte Archeologiche e Numismatiche.

(H) Lurate Caccivio, loc. Abbate (già Lurate Abbate), 1887 (*dep.:* inizio XIV secolo (c. 1314; per STAHL 2000, p. 433; MEC 12, p. 677: c. 1320; DE BENETTI 2019a, n. 5: post 1320))

Durante i lavori di restauro di una casa colonica di proprietà del nobile Cesare Cagnola, ripostiglio con 29 AV e 1.244 AR+MI di zecche italiane, tra cui Asti, Ivrea, Acqui Terme, Ponzzone, Genova, Milano, Merano, Trento, Tortona, Pavia, Brescia, Cremona, Piacenza, Parma, Reggio Emilia, Modena, Bologna, Firenze, Siena, Pisa, Arezzo, Brindisi, Messina, oltre a grossi tornesi per Filippo IV e Carlo II Angiò.

Descrizione sommaria in AMBROSOLI 1888, con possibili errori. La moneta indicata come di Ludovico V di Baviera (p. 17) è in realtà di Ludovico IV il Bavaro.

Composizione (secondo MEC 12, p. 677 n. 29):

- monete AV

- Firenze, 14 fiorini
- Genova, 8 fiorini (ultimo trentennio del XIII secolo);
- Venezia, 7 ducati (6 Pietro Gradenigo, 1289-1311; 1 Marino Zorzi, 1311-12);

- monete AR+MI

- Acqui Terme, 2 grossi tirolini (Oddone Bellingeri, 1305-13);
- Arezzo, 15 grossi (XIII-XIV secolo);
- Asti, 3 grossi tornesi (conciati tra gli anni Novanta del XIII secolo e il primo quarto del XIV secolo);
- Bologna, 26 bolognini (c. 1233-1337);
- Brescia, 1 grosso con sant'Apollonio (c. 1300-30);
- Brindisi, 35 denari (Enrico VI, 1194-97);
- Chivasso, 1 grosso tornese e 7 grossi di tipo veneziano (Teodoro I Paleologo di Monferrato, 1307-38);
- Cremona, 2 grossi con sant'Imerio (c. 1300-30);
- Cuneo, 1 grosso tornese (Carlo II d'Angiò, 1307-09);
- Ponzzone, 5 grossi di tipo veneziano (2 anonimi; 3 Enrico e Corrado, seconda metà del XIII secolo fino al 1310);
- Firenze, 13 popolini;
- Ivrea, 7 grossi tirolini (c. 1300-13);
- Merano, 25 grossi aquilini (Mainardo II e Alberto II, conciati tra il 1259 e il 1274); 163 grossi tirolini (a nome di Mainardo II, conciati tra il 1274 e il 1306);
- Messina, 24 pierreali (8 Pietro I d'Aragona e Costanza, 1282-85; 3 Giacomo I, 1285-96; 13 Federico III, 1296-1337);
- Modena, 4 grossi (Federico II, ante 1293);
- Parma, 1 grosso (con sant'Ilario?, 1302-11);
- Pavia, 3 grossi (1254-99/1299-1323?);
- Piacenza, 26 grossi (XIII secolo - 1313);
- Pisa, 5 grossi aquilini (c. 1270-1312);
- Reggio Emilia, 1 grosso (Nicolò Maltraversi, 1237-43);
- Siena, 4 grossi (metà XIII secolo);
- Tortona, 2 grossi (1254-c. 1300);
- Trento, 3 grossi (XIII secolo);

- Torino, 1 grosso di tipo veneziano (Filippo di Savoia, 1301-37);
- Venezia, 574 grossi (9 Pietro Ziani, 1205-29; 10 Jacopo Tiepolo, 1229-46; 6 Marino Morosini, 1249-53; 90 Ranieri Zeno, 1253-65; 39 Lorenzo Tiepolo, 1268-75; 35 Jacopo Contarini, 1275-80; 64 Giovanni Dandolo, 1280-89; 317 Pietro Gradenigo, 1289-1311; 4 incerti);
- Milano, 5 denari (4 Ludovico il Pio, 814-840; 1 Ludovico IV di Baviera, 1313-47 ma coniato tra il 1326 e il 1330); 25 grossi ambrosini minori (49 età comunale, 1298/9-1310; 5 Enrico VII di Lussemburgo, 1310-12);
- Provenza, 18 grossi tornesi (Carlo II d'Angiò, 1285-1309);
- Serbia, 1 imitazione di grosso veneziano

Composizione (secondo STAHL 2000, p. 433 n. 21 – per le monete di Venezia – e BALDASSARRI, RICCI 2013, pp. 293-294):

- 50 grossi veneziani, dal doge Pietro Ziani a Giovanni Dandolo (v. oltre); 6 zecchini di Pietro Dandolo ed uno per Marin Zorzi; 188 monete di Merano: 25 erano grossi aquilini attribuiti al conte Alberto, e 163 grossi tirolini di Mainardo II; 7 grossi repubblicani di Ivrea e 2 di Acqui Terme del vescovo Oddone Bellingeri; 7 grossi di tipo veneziano e 1 grosso tornese di Teodoro I Paleologo (1306-1338), zecca di Chivasso; 3 grossi del secolo XIII della zecca di Trento; 181 grossi tornesi ed un mezzo tornese di Filippo IV il Bello di Francia, e 18 grossi tornesi di Carlo II d'Angiò, come conte di Provenza; 84 monete di Milano: 4 denari AR Ludovico il Pio/Milano (814-840); 49 soldi della prima Repubblica; 25 grossi da soldi due, e 6 esemplari del soldo dell'imperatore Enrico VII; un denaro di Lodovico IV il Bavaro.
- Altre monete di zecche italiane: Tortona, Pavia, Brescia, rispettivamente da 2, 3 e 1 soldi della Repubblica; Cremona 2 grossi con Sant'Imerio; Piacenza da 26 grossi repubblicani; Parma grossetto battuto fra il 1269 e il 1299; Reggio da un bolognino del vescovo Nicolò Maltraversi; Modena da 4 grossi col nome di Federico; Bologna da 26 bolognini repubblicani; imitazioni del grosso tirolino, del matapan, del grosso tornese.
- Tra gli esemplari di zecche toscane: 13 popolini e 14 fiorini di Firenze, fine XIII-inizio XIV secolo; 15 grossi minori di Arezzo, seconda metà XIII secolo; 5 grossi minori di Pisa, fine XIII-inizio XIV secolo; 4 grossi di Siena, prima metà del XIII secolo. Seguono 35 monete per Enrico VI di Brindisi HENRICVS REX SEMPER AVGVSTVS; 8 tari di Pietro I di Aragona e Costanza, 3 di Giacomo, e 13 di Federico di Messina.
- Per la zecca di Genova: 8 genovini d'oro «di epoca anteriore alla istituzione del Dogato».
- Tra le monete di Asti, segnalati 3 grossi tornesi, 1 grosso e 2 c.d. "doppi grossi" (ma denominazione impropria, da rivedere).
- Tra le monete di Venezia, notati ducati AV e grossi AR, secondo la ripartizione riportata qui di seguito (STAHL 2000, p. 433 n. 21).
 - Ducati: 6 di Pietro Gradenigo (1289-1311), ma attribuzione incerta; 1 di Marino Zorzi (1311-1312).
 - Grossi: 9 di Pietro Ziani (1205-1229); 10 di Jacopo Tiepolo (1229-1249); 6 di Marino Morosini (1249-1253); 90 di Ranieri Zen (1253-1268); 39 di Lorenzo Tiepolo (1268-1275); 35 di Jacopo Contarini (1275-1280); 64 di Giovanni Dandolo (1280-1289); 317 di Pietro Gradenigo (1289-1311).

In STAHL 2000, p. 433 n. 21 si propone una data di interrimento intorno al 1320 circa. La deposizione potrebbe però essere posteriore di una decina di anni, se si accetta l'ipotesi che il denaro imperiale di Ludovico IV il Bavaro della zecca di Milano sia del tipo con legenda *imperator*, emessa fino al febbraio del 1329 (secondo M. Bazzini).

Si può avanzare qualche dubbio sul fatto che i 4 denari assegnati a Ludovico il Pio siano effettivamente di questo sovrano (Ludovico II? Ludovico III?) o realmente di Milano.

Cons.: Disperso. Secondo la testimonianza di Solone Ambrosoli, il ripostiglio dopo il suo rinvenimento era stato acquisito e confluito

nella collezione personale di Ercole Gnechi. Tre esemplari particolarmente rari erano invece entrati a far parte della disponibilità del Regio Gabinetto Numismatico di Brera, di cui lo stesso Ambrosoli era conservatore. In seguito alla messa in vendita dell'intera raccolta numismatica Gnechi da parte del

proprietario nel 1902, le monete facenti originariamente parte del ripostiglio risultano oggi disperse in numerose collezioni. Il patrimonio del Regio Gabinetto Numismatico di Brera è invece confluito, a partire dal 1916, nell'attuale Civico Gabinetto Numismatico e Medagliere di Milano: le tre monete da Lurate Caccivio dovrebbero trovarsi tuttora in questa raccolta, ma non risultano identificabili.

(H) Menaggio, 25 marzo 1974 (dep.: ultimo quarto del XV secolo)

Nel corso di lavori edili di restauro di una antica casa, c. 30 MI da una cavità all'interno di un muro, ma solo 8 recuperati:

- 7 denari imperiali Giovanni III Paleologo (1445-64), zecca di Casale Monferrato;
- 1 denaro attribuito impropriamente alla zecca di Valenza.

L'iniziale denominazione di "maglia di bianchetto" proposta dai diversi AA. per le monete di Giovanni III Paleologo deve ora essere corretta in "denaro imperiale" (v. MEC 12, p. 181).

Cons.: Disperso tra gli scopritori. Solo quattro dei sette denari imperiali sono confluiti presso le Civiche Raccolte Numismatiche di Milano.

Bibl.: ARSLAN 1977; POZZI 1993, pp. 514-515; CHIARAVALLE 2006, p. 106; SACCOCCI 2009c, p. 96 n. 7; MEC 12, p. 677 n. 30a.

(SF) Ponte Lambro, loc. Schieppo, villa romana, scavi 1987, 1989, 1990, 1992, 1995 (dep.: n.s.)

Gli scavi sul sito della villa romana di Ponte Lambro hanno restituito 61 monete: tre in argento, le restanti in metallo vile. Quindici sono state rinvenute nel corso della campagna del 1987, una nel 1989, 33 nel 1990, una nel 1992, undici nel 1995. Per tredici esemplari non è stato possibile individuare l'autorità emittente, ma solo una proposta cronologica, in virtù dei valori pndometrici o iconografici laddove parzialmente conservati. La documentazione comprende un unico esemplare di età repubblicana e di emissione insubre, cui fanno seguito 19 monete di II secolo d.C. e 15 di III. Il ritrovamento associato di 29 di esse ha consentito il loro riconoscimento come un originario ripostiglio. I restanti esemplari sono attribuibili per lo più al IV secolo, salvo un $\text{AE } 4$ di Onorio e nove nominali illeggibili o quasi, che per ragioni pndometriche o grazie al riconoscimento delle tracce evanide dei soggetti, potrebbero essere stati emessi tra la fine del IV e la prima metà del V secolo. La moneta più tarda è una frazione di siliqua di produzione ostrogota ($1/8$ siliqua AR Anastasio/Baduela per ARSLAN 1989).

Le monete provengono da quasi tutti i settori in cui è stato suddiviso il cantiere, concorrendo ad inquadrare dal punto di vista temporale le fasi di frequentazione del sito, insieme con i dati stratigrafici e le indicazioni cronologiche fornite dallo studio complessivo dei reperti. La rarefazione delle occorrenze monetali nella seconda metà del III secolo ha permesso dunque di ipotizzare una fase di abbandono dell'area, cui fa seguito una seconda fase di vita, documentata dai nominali di IV e V secolo, rinvenuti in gran parte in unità stratigrafiche interpretate come piani d'uso. La frequentazione del sito anche nel secolo successivo può essere ipotizzata grazie alla scoperta del nominale ostrogoto. A tale interpretazione concorrono parimenti i materiali ad esso connessi, assegnabili ad un identico ambito temporale.

V. anche il ritrovamento n. 6655 per una dramma padana AR tipo XV $\rho\iota\kappa\omicron\iota$ da Ponte Lambro, probabilmente la stessa moneta insubre qui segnalata.

Bibl.: ARSLAN 1994, p. 511; ARSLAN 2004i, n. 3920 (cita solo la moneta ostrogota); DE MARCHI 2005, p. 110 (indicata come siliqua di Baduela); BONA, PERASSI 2016 (nuova pubblicazione integrale dei materiali).

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: necropolis / cemetery

(H) Offanengo, giugno 1896 (dep.: c. 1162-84 (per RIZZONELLI 2017, c. 1162-63) o XIII sec. (per MEC 12, p. 679))

Nel giugno 1896, durante i lavori di demolizione di una chiesa a Offanengo, venne rinvenuto un vaso in pietra contenente 1.725 AR+MI. Il ritrovamento fu dapprima tenuto in custodia dall'arciprete di Offanengo, don Cesare Caravaggi, per ordine della Prefettura di Cremona, avvisata dal del ritrovamento dal sindaco della località. Le monete vennero successivamente

inviata al conservatore del Medagliere di Brera, Solone Ambrosoli, che provvide a classificarle, trattenendone 41 per il Medagliere stesso. Le rimanenti 1.684 vennero restituite a don Caravaggi. Sulla base della relazione di Ambrosoli spedita al Ministero, al momento del ritrovamento il ripostiglio consisteva in:

- 168 denari della zecca di Brescia;
- 98 denari di tipo arcaico e 31 denari di tipo più recente della zecca di Cremona;
- 11 denari della zecca di Mantova;
- 322 denari della zecca di Milano a nome dell'imperatore Federico;
- 1.083 denari e 12 oboli a nome dell'imperatore Enrico;
- altri denari milanesi a nome di Enrico *frammentati o guasti*, non conteggiati dall'Ambrosoli.

Segnalato denaro enriciano milanese in stagno: possibile falso d'epoca, per quanto di eccellente fattura.

Per MEC 12, pp. 679-680 gli esemplari sopravvissuti consistono in:

- 8 denari mezzani scodellati di Brescia (1184-1249);
- 10 denari inforziati di Cremona (9 del periodo 1165-c. 1230; 1 con lettere gotiche del c. 1300-30);
- 3 denari piani di Mantova (c. 1150-1254);
- 10 denari di Milano (10 denari terzoli scodellati, XII-XIII secolo; 8 denari imperiali, 1162-67 o dopo).

In MEC 12, p. 679 si parla invece di *hoard ... made up of 1,725 B mainly from the early thirteenth century with some late thirteenth- and/or early fourteenth-century coins, possibly intrusions; of the original hoard, only 41 coins were retained, 5 of which were added to the Brera collection (Milan) without indication of provenance.*

Per RIZZONELLI 2017, delle 41 monete trattenute dall'Ambrosoli per il Medagliere di Brera, solo 38 sarebbero presenti oggi nel medagliere delle Civiche Raccolte Archeologiche e Numismatiche di Milano. Di esse, 8 sarebbero però da ritenersi estranee al contesto del ritrovamento.

Cons.: Milano, Civiche Raccolte Archeologiche e Numismatiche (38 esemplari, ma per RIZZONELLI 2017 solo 30 in quanto otto di essi non sono da ricondurre al ripostiglio).

Bibl.: CHIARAVALLE 1988b; COTI ZELATI 2001; RIZZONELLI 2014 (cita); MEC 12, pp. 679-680 n. 42; RIZZONELLI 2017 (per riesame del contesto del ritrovamento e analisi XRF dei 38 esemplari conservati presso le Civiche Raccolte Archeologiche e Numismatiche di Milano); RIZZONELLI 2021, pp. 283-284 nota 13, p. 290 (cita in riferimento al ritrovamento di Cisano Bergamasco, n. 6571).

Other characteristics of the materials: fragmented coins / fragments

(oth) Offanengo, via Dante, necropoli altomedievale, 2010 (*dep.*: fine VI – inizio VII sec.)

Durante lavori edili effettuati nel 2010 ad Offanengo è stato rinvenuto un piccolo nucleo funerario composto da cinque sepolture ad inumazione. Nella tomba 5, bisoma e forse appartenente a una madre con il figlio/a, è stata rinvenuta una collana costituita da almeno 13 monete in bronzo forate e da 10 vaghi policromi in pasta vitrea. Completavano il corredo un'armilla in bronzo a capi aperti ingrossati e un ago crinale in bronzo.

Sulla base dell'analisi preliminare dei materiali la sepoltura è da datare tra la fine del VI e l'inizio del VII secolo d.C.

Le monete che facevano parte della collana si presentano di difficile lettura per la prolungata circolazione e per la permanenza nel suolo. È stato comunque possibile riconoscere un antoniniano emesso da Gallieno per la zecca di Roma e 12 emissioni databili nel corso della seconda metà del IV secolo d.C.

Bibl.: ARSLAN 2013; ARSLAN 2014a; FACCHINETTI 2022a (per la collana con monete e vaghi in pasta vitrea).

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: necropolis / cemetery

Other characteristics of the materials: pierced coins

(SF) Palazzo Pignano, scavi maggio-giugno 2016 (dep.: II-IV sec. d.C.)

L'indagine archeologica del saggio B ha restituito tre monete di età romano-imperiale, rinvenute nel corso dello scavo di US 2, livello interpretato come coltivo legato all'uso agricolo dell'area successivo all'abbandono della villa. Nessuno dei reperti si trovava in giacitura primaria: nello strato sono infatti presenti manufatti di età romana in associazione con materiali databili al periodo bassomedievale e moderno. Possiamo dunque supporre che le monete siano state spostate dal loro luogo di deposizione originario per effetto degli sconvolgimenti dovuti alle arature e successivamente si siano venute a trovare in una situazione stratigrafica differente e non più affidabile. È tuttavia estremamente probabile che i reperti numismatici fossero originariamente deposti non lontano dal luogo del ritrovamento. Per questo motivo la loro presenza può essere collegata alle fasi di vita della villa e indicare periodi di frequentazione dell'area.

Materiali trovati:

- Marco Aurelio; asse; zecca di Roma; 161-180 d.C.;
- Graziano? Valentiniano II? Teodosio I?; Æ 2; zecca incerta; 378-383 d.C.;
- Valentiniano II? Teodosio I? Arcadio?; Æ 4; zecca di Aquileia; 383-387 d.C.

Discovery of the find: discovery during archaeological investigations

(SiF) Palazzo Pignano, loc. Cascine Gandine, 2014 (dep.: I sec. d.C.)

Nel 2014, a poche centinaia di metri a nord rispetto al nucleo rustico-abitativo di Palazzo Pignano, presso la località Cascine Gandine, è stato riconosciuto un tratto di un antico sentiero campestre orientato SO/NE, trasformato successivamente in un percorrimto che poneva probabilmente in connessione l'insediamento umano di Palazzo Pignano con altre realtà rurali. Tra i pochi reperti individuati nel sedime stradale si segnala una moneta bronzea di età claudia.

(H) Rivolta d'Adda, aprile 1975 (*dep.*: fra terzo e quarto quarto del II sec. a.C.)

Il ripostiglio fu scoperto a Rivolta d'Adda (CR) nell'aprile del 1975 nel corso di lavori edili per la realizzazione di un muretto, a circa mezzo metro di profondità. L'operaio addetto allo scavo, accortosi della presenza di un oggetto grossomodo sferico, temendo che fosse un residuo bellico, ruppe il contenitore ceramico rivelando la presenza di un ammasso confuso di piccoli oggetti metallici. Raccolto tutto, se lo portò a casa. La pulizia di uno dei pezzi rivelò la portata del rinvenimento. Le modalità del tutto casuali di scoperta non consentono di sapere se il tesoretto monetale fosse stato occultato in prossimità di un abitato.

Il ripostiglio, a seguito della dispersione di un numero imprecisato di pezzi, apparentemente non molto consistente, è attualmente composto da 115 dracme padane. Si evidenzia la presenza di tre tipi diversi di dracme: XVI (87 esemplari, 75,65%), XVII (27 esemplari, 23,47%) e X (1 esemplare, 0,87%). Sulla base di questa composizione, si ipotizza una formazione del ripostiglio fra terzo e quarto venticinquennio del II secolo a.C., arco cronologico che appare compatibile con la tipologia

del contenitore, un vaso a trottola, mancante della bocca, inquadrabile nella fase finale del LTC2. L'attribuzione ipotetica dei tipi XVI e XVII, ovvero della quasi totalità del ripostiglio, alle popolazioni residenti fra Piemonte orientale e Lombardia occidentale induce a ipotizzare che il gruzzolo si sia formato in quest'area e che, per ragioni imprecisabili, sia poi stato trasportato più ad oriente dove probabilmente sarà stata aggiunta la dracma del tipo X, assegnata a zecca cenomane.

Allo stato attuale delle conoscenze appare pressoché impossibile comprendere le ragioni di questo spostamento, come pure dell'occultamento e del successivo mancato recupero del gruzzolo monetale. La possibile testimonianza della mobilità di persone da occidente a oriente risulta, comunque, interessante per comprendere le dinamiche del popolamento in Lombardia nella seconda metà del II secolo a.C.

Lodi

(H) Guardamiglio, luglio 1795 (*dep.:* c. 875-7)

Notizia del ritrovamento di 563 denari d'età carolingia, non meglio identificati.

In Coupland 2011 (n. 159) si parla di monete di Ludovico II, Carlo il Calvo e Carlomanno, citando come fonte delle indicazioni una comunicazione personale di Marco Bazzini. Successivamente (2018) Bazzini stesso ritornò sul ritrovamento, senza però dare cenno alle autorità emittenti delle monete.

Cons.: Subito dopo la scoperta, i materiali furono depositati presso il Museo d'Antichità (oggi Museo Archeologico Nazionale) di Parma, a quel tempo diretto da Angelo Schenoni. Ricognizioni recenti nelle raccolte del Museo non hanno però portato alla luce alcuna moneta riconducibile al ritrovamento.

Coupland (2011, p. 233) afferma però di avere visto 4 es. a nome di un Ludovico (II?), 3 a nome di Carlo (il Calvo?) imperatore e 1 di Carlomanno.

(SiF) Lodi Vecchio, proprietà Corte Bassa, primavera 2009 (dep.: VI sec. d.C.)

Nella primavera 2009 la Soprintendenza condusse indagini preventive all'interno della proprietà Corte Bassa, nei terreni a sud dei resti della cattedrale romanica. Gli scavi misero in luce una stratigrafia per lo più di età romana. Solo sul limite nord e in uno spazio molto ridotto dell'area emerse un nucleo di tombe longobarde di prestigio, di cui una totalmente depredata ma riconoscibile dalla presenza di buche per una struttura con pali angolari.

Altre tre, molto vicine ma senza interferire tra di loro, conservavano ricchi corredi in parte assimilabili, tanto da suggerire l'appartenenza a un unico gruppo familiare. Le due tombe più antiche presentavano una tipologia cd. "a camera lignea", che nel nord Italia caratterizza le tombe longobarde delle prime fasi dell'immigrazione (dal 568 d.C.). La terza, invece, presentava una struttura monumentale in laterizi, tipologia che, assieme a specifiche osservazioni sul corredo, ne abbassano la datazione approssimativamente di una generazione. Le tombe avevano uguale orientamento est-ovest.

In una delle tombe è stato individuato un solido AV a nome dell'imperatore Zenone, che potrebbe però essere una imitazione barbarica da riferire a Odoacre.

Le tombe suggeriscono l'esistenza nella città di Laus Pompeia di un presidio longobardo in epoca probabilmente di poco posteriore all'assedio di Pavia del 569/72, con una élite che poté seppellire dei propri membri in uno dei luoghi più significativi della Laus romana e cristiana, prossimo se non parte dell'area consacrata nel IV sec. d.C. dalla costruzione da parte di Bassiano della cattedrale e dell'episcopio.

Mantova

(H) Cavriana, 1895 (dep.: post 1255)

GNECCHI 1897, pp. 23-24: *Nel Comune di Cavriana (Prov. di Mantova), un operaio, nel demolire un vecchio muro, scopriva, due anni or sono, un gruzzolo di circa 100 monetine italiane d'argento. Di queste monete, settanta furono acquistate da un proprietario del luogo, il quale, solo poco tempo fa, decise d'alienarle. Ho avuto la fortuna di acquistarle tutte e di trovarne altre ch'erano andate disperse; cosicché posso dire di possedere il ripostiglio nella quasi sua totalità. Il tesoretto è piccolo, ma molto variato e interessante, contenendo alcune monete affatto nuove. [...] Fra le monete nuove, di cui possedevo due esemplari, ne ho di buon grado sacrificato uno, per far eseguire l'assaggio del titolo, e poter così stabilire con certezza la loro denominazione. Sono tutte monete delle Repubbliche Italiane dei secoli XII e XIII, e appartengono alle seguenti città: Acqui [Terme], Asti, Bergamo, Brescia, Como, Cortemiglia [Cortemilia], Cremona, Lodi, Mantova, Milano, Piacenza, Tortona e*

Vercelli. Descrizione però approssimativa, con errori nelle denominazioni degli esemplari, spesso indicati come *oboli* e non come *terzoli* o *mezzani*.

Per *MEC* 12, p. 672 n. 10, tra i tipi ritrovati vi sarebbero: grosso di Acqui Terme (metà XIII sec.), grosso di Asti (XIII sec.), grosso da 4 denari di Bergamo (1236 – c. 1250), grosso da 4 denari di Como (c. 1239-54), grosso di Cortemilia a nome dei marchesi del Carretto (metà XIII sec.), grosso da 6 imperiali di Cremona (post 1254), grosso da 4 denari di Lodi (c. 1240-50), grosso da 8 denari pavesi di Tortona (1248-54), grosso da 8 denari di Vercelli (post 1255). Tra le monete in mistura: 2 varianti dei mezzi denari scodellati con la stella di Bergamo (1254/6), obolo (?) di Brescia, almeno tre tipi di denari mezzani o nuovi di Como (1254/6), mezzo denaro (1230-56) e denaro piccolo di Mantova (vescovi anonimi, 1257-72), denari *terzoli* di Milano con *O croxato* e rosette (c. 1250), denaro imperiale di Piacenza e denaro mezzano di Tortona.

Il ripostiglio è posteriore al 1255, in quanto contiene un esemplare della zecca di Vercelli, aperta solo nel corso di quell'anno.

Bibl.: GNECCHI 1897; MAGNAGUTI 1940, p. 124 (cita); MURARI 1981, p. 38, nota 39 (cita); *MEC* 12, p. 672 n. 10; GIANAZZA, FERRO 2019, p. 292 n. 2 (cita per la presenza di monete di Cortemilia); ODDONE 2022, n. 19 (cita per la presenza di monete di Asti).

Discovery of the find: discovery during archaeological investigations

(SF) Mantova, via Rubens 11, scavi 2012 (dep.: IV-V sec. d.C.)

Ricognizioni condotte nel 2012 all'altezza dell'attuale civico 11 di via Rubens a Mantova. Sopra i livelli di abbandono di una *domus* di età imperiale, viene costruito un edificio di funzione e sviluppo planimetrico incerti, documentato per ora solo da una fondazione muraria est-ovest, le cui dimensioni notevoli fanno ipotizzare l'appartenenza a un complesso di rilievo.

Segnalati materiali di interesse numismatico:

- nello strato che copre i resti della *domus* ed è tagliato dalle fondazioni ottagonali, frammenti

di ceramiche grezze, ciotole a listello invetriate, anfore e monete preliminarmente collocabili nel V secolo (l'esemplare più tardo è un AE4 di Arcadio, databile fra 394 e 402 d.C. ma che potrebbe essere rimasto in circolazione per tutto il V secolo);

- tra le inumazioni rinvenute all'interno della struttura ottagonale, in sepoltura di bambino longobardo di 3-4 anni databile tra l'ultimo terzo del VI secolo e l'inizio del VII, collana in filo d'argento decorata da una crocetta d'argento, vaghi in pasta vitrea e pendente monetale costituito da solido di Costanzo II (*RIC* 8, p. 518, n. 83; zecca di Antiochia, 347-355 d.C.).

Il bambino, probabilmente di sesso maschile, era stato deposto con un corredo di notevole valore. Attorno al collo indossava la collana con pendente monetale. Sul bacino era una cintura multipla con guarnizioni in oro decorate con motivi di tradizione bizantina, probabilmente chiusa da una fibbietta in argento a placca fissa. Sul petto, a ornamento del velo funebre, era una piccola crocetta aurea priva di decorazioni. Infine, in prossimità della testa, sul lato destro del defunto, erano stati deposti un'olpe in bronzo, probabilmente ancora di tradizione romana, e un bicchiere od olletta ansata in ceramica comune a impasto grezzo di orizzonte altomedievale.

Cons.: La collana con pendente a Mantova, Museo Archeologico Nazionale.

Bibl.: FACCHINETTI, CASTAGNA, POSSENTI, MANICARDI 2018.

(SF) Monzambano, pieve di santa Maria "in Castro", scavi 1999 (dep.: n.s.)

Nel 1999, in occasione del progetto di risistemazione urbanistica della piazza del Castello, vennero in luce alcune strutture archeologiche, che resero necessario procedere a scavi in estensione.

Le evidenze rinvenute erano di fatto state tutte realizzate in taglio sul substrato morenico sterile e

risultavano coperte da uno strato a matrice prevalentemente limosa che conteneva reperti, tra cui si segnalano tre monete in bronzo e un frammento di pettine in osso tardo-antico o altomedievale, pertinenti a tutte le fasi di frequentazione del sito.

Il corpo di fabbrica che delimita il lato meridionale della piazza del castello è attualmente occupato, a occidente, da un'abitazione privata e, nella parte orientale, dalla chiesetta dedicata a san Biagio. Un'attenta osservazione delle murature rivela come esso dovesse essere, in origine, interamente deputato a ospitare una chiesa. La struttura è sicuramente da identificare con l'antica chiesa parrocchiale di santa Maria che, per caratteristiche tipologiche e per quanto è stato possibile rilevare nel corso dello scavo, dovrebbe risalire al secolo IX.

Discovery of the find: discovery during archaeological investigations

(H) Motteggiana, fraz. Villa Saviola, 1883 (dep.: c. 1315-30)

Ripostiglio, con numero imprecisato di esemplari ma dell'ordine delle diverse centinaia. Segnalati:

- Pavia, *alcune centinaia* di denari imperiali (c. 1254/6-1323);
- Milano, c. 100 denari imperiali (Enrico VII di Lussemburgo, conati nel 1311-12);
- Como, c. 10 denari imperiali con legenda *CVMANVS* (Enrico VII di Lussemburgo, conati nel 1312-13);
- Piacenza, 2 denari imperiali con la leggera *G* (Galeazzo I Visconti, 1313-22).

MEC 12, p. 685: the hoard is preserved in the collection of the Castello Visconteo in Pavia, which identifies coins that did not figure in Brambilla's original description as belonging to the hoard, for example denari mezzani of Pavia and denari imperiali of Cremona (after 1254) and of Bergamo, but Brambilla's description of the hoard is probably more reliable.

Cons.: Pavia, Castello Visconteo.

(H) Legnano, n.s. (ante 1890) (dep.: 149-125 a.C. (?))

Ripostiglio, composto da “numerosissime monetine” (SUTERMEISTER 1928, p. 24). Notate monete AR romano-repubblicane (*denarii* di C. Allius, P. Paetus e della *gens* Aelia; tra 175/172-130/125 a.C.) con 2 dramme padane AR tipo Pautasso 3/Tipo VII-VIII (?); 3 dramme padane AR tipo Pautasso 7A/Tipo XVI-XVII; 19 dramme padane AR tipo Pautasso 7B/Tipo XVI-XVII; 1 dramma padana AR tipo Pautasso 7C/Tipo XVI-XVII. Un’ulteriore dramma padana AR è illustrata in SUTERMEISTER 1928, p. 25, fig. 13, ma attualmente non è stata rintracciata.

In VISMARA, MARTINI 1988, p. 102 si ipotizza che una moneta della *gens* Saufeia presente al Museo Civico “G. Sutermeister” di Legnano provenga in realtà da questo ripostiglio, e che dunque i materiali depositati presso le Civiche Raccolte Archeologiche e Numismatiche di Milano costituiscano in realtà solo una parte dei materiali venuti alla luce.

Cons.: Parzialmente disperso all’atto del ritrovamento. Una parte delle dramme padane (in tutto 25 esemplari) risulta oggi conservata presso le Civiche Raccolte Archeologiche e Numismatiche di Milano.

Bibl.: [CASTELFRANCO 1908], p. 63; SUTERMEISTER 1928, pp. 24-25; [PAUTASSO 1966], p. 64, p. 127 n. 23 (lo data al 200 a.C.); *RRCH* 150 (150-125 a.C.); [PAUTASSO 1973-75], pp. 131 ss. (cita pedemontane e insubri tipo 7); CHIARAVALLE 1980a; CRAWFORD 1985, p. 294 (della seconda guerra punica, per le romane associate: descrizione del von Duhn sbagliata); VISMARA, MARTINI 1988, pp. 64, 102 (cita); [ALLEN 1990], p. 19 n. 50 (25 padane, cita tipi Pautasso); [PIANA AGOSTINETTI 1996/4] (datato 149-125 a.C.); [PIANA AGOSTINETTI 1996/3], p. 305, 19.1; DI MAIO 1998, p. 15 n. 18 (cita, poi p. 36; poco informata).

(H) Legnano (?), n.s. (dep.: n.s.)

Da un inventario dattiloscritto degli ingressi al Museo Civico “G. Sutermeister” di Legnano (copia posteriore, del 1955?), al n. 1310, si legge: “Dalla tomba alla cappuccina: 2 vasetti alimenti, 2 ciotoline bere, 16 monete rame da 12 a 17 mm, più 2 che tiene la proprietaria; 1 pugnale di ferro e

1 fibbia del cinturone; frammenti di tegoloni con sigla. Restano al Museo [...] 16 monete”.

Il ritrovamento sarebbe anteriore al 1955, perché i materiali entrati nel museo dopo quella data sono registrati in una parte successiva dell’inventario.

Tra i materiali presenti al museo non sono immediatamente individuabili le monete in questione, dal momento che mancano dati più precisi in merito al ritrovamento. La provenienza da Legnano, per quanto probabile, non è affatto sicura. Potrebbero trattarsi delle monete dei ritrovamenti n. 8622 (v.) o più probabilmente n. 8623 (v.).

Cons.: Legnano, Museo Civico “G. Sutermeister” (?): ma quali?

Id.: 8759

Tags: Roman

(uns) Legnano (?), 1955 (?) (dep.: n.s.)

Da un inventario dattiloscritto degli ingressi al Museo Civico “G. Sutermeister” di Legnano (copia posteriore, del 1955?, con integrazioni post 1962?), al n. 002, si legge: “1 Moneta massaliota argento. È depositata nella teca (via Calatafimi) 1955 su sostegno a “messale”; e presente 1962”.

L’effettiva provenienza della moneta da un ritrovamento, in particolare dal territorio di Legnano, non è certa. Forse una delle monete scoperte a Legnano nel 1890 (v. ritrovamento n. 6719)?

L’esemplare non risulta tra le monete proposte in MARTINI, VISMARA 1988, né è stata individuata nella ricognizione effettuata da L. Gianazza presso il Museo Civico “G. Sutermeister” in data 22/7/2014.

Nature of the site at the time of concealment or loss: necropolis / cemetery

(SF) Legnano, via della Vittoria, n.s. (ante 1955 (?)) (dep.: n.s.)

Da un inventario dattiloscritto degli ingressi al Museo Civico "G. Sutermeister" di Legnano (copia posteriore, del 1955?), al n. 080, si legge: "2 monetine (sesini) viscontei trovati in un vano a muro Casa via Vittoria Legnano".

Tra i materiali presenti al museo non sono riconoscibili monete con queste caratteristiche. Non è da escludere che si tratti di una descrizione molto imprecisa, e che le monete debbano piuttosto essere individuate in alcuni sesini di età spagnola (Filippo IV di Spagna), sempre della zecca di Milano, attestate invece nelle raccolte locali.

Discovery of the find: discovery during archaeological investigations

(H) Legnano, via Sempione, "casa Lampugnani", n.s. (dep.: n.s.)

Ripostiglio, con 66 (?) monete di età viscontea. Prima citazione in SUTERMEISTER 1928, con descrizione sommaria dei pezzi ed errore (?) nella valutazione del loro numero complessivo.

SUTERMEISTER 1928, p. 41: *Negli scavi che il Cottonificio fece dopo demolita la casa rustica che al N. 7 di Via Sempione colla sua fronte sulla via copriva la retrostante casa dei Cavalieri Lampugnani (la quale era anche più in basso nella lieve Valle dell'Olona) si trovò nelle fondazioni alla profondità di 2 m. una ciotoletta contenente 65 monete medievali che l'Ing. Cozzi Pietro donò al Museo.*

Da un inventario dattiloscritto degli ingressi al Museo Civico "G. Sutermeister" di Legnano (copia posteriore, del 1955?), al n. 018, si legge: "65 monete di G. Galeazzo Sforza (*sic!*) e Azzone Visconti (vedi piantina nel mastrino A in 16° carta verde. «Località e Persone», pag. 18 n° 65".

Catalogo illustrato in VISMARA, MARTINI 1988, per un totale però di 66 esemplari. Possibile contaminazione?

Composizione: 5 denari imperiali MI, Azzone Visconti (1329-1339), zecca di Milano; 2 denari MI, Bernabò Visconti (1354-1385), zecca di Milano; 6 soldi AR, Gian Galeazzo Visconti (1395-1402), zecca di Milano; 1 soldo AR, Gian Galeazzo Visconti (1387-1402), zecca di Verona; 1 sesino (?) AR, Gian Galeazzo Visconti (1395-1402), zecca di Milano; 3 sesini AR, Gian Galeazzo Visconti (1395-1402), zecca di Milano; 30 denari MI, Gian Galeazzo Visconti (1395-1402), zecca di Milano; 15 bissoli MI, Giovanni Maria Visconti (1402-1412), zecca di Milano; 1 bisso MI, Giancarlo ed Estore Visconti (1412), zecca di Milano; 2 bissoli MI, Filippo Maria Visconti (1412-1447), zecca di Pavia.

Donate da P. Cozzi. Denominazioni e cronologie degli esemplari milanesi passibili di revisione sulla base degli studi più recenti.

Cons.: Legnano, Museo Civico "G. Sutermeister".

Bibl.: SUTERMEISTER 1928, pp. 41-42 (con mappa, ma descrizione degli esemplari imprecisa e segnalati in numero inferiore - 65 - rispetto a quanto attestato oggi al Museo Civico di Legnano); VISMARA, MARTINI 1988.

(oth) Milano, basilica di san Vittore al Corpo, sagrato, scavi 2018-19 (dep.: XV-XVI sec.)

Durante le indagini eseguite tra il 2018 e il 2019 per la costruzione della linea 4 della metropolitana nel sagrato della basilica di san Vittore al Corpo a Milano, è stato messo in luce un sito pluristratificato di grande ampiezza e interesse. Relativamente al periodo di frequentazione corrispondente all'età Moderna, ai lati di una struttura ecclesiastica identificata con la demolita chiesa di san Martino al Corpo, sono state rinvenute due profonde tombe a camera in laterizio (tomba 10 e tomba 20) contenenti, rispettivamente, circa 30 e 103 individui qui deposti tra la fine del XV e gli inizi del XVI secolo.

Le sepolture hanno restituito un numero elevatissimo di monete, pari a 32 e 79 esemplari. Ben 97 di essi, in metallo vile, rientrano perfettamente nel circolante di basso conto utilizzato in città tra

il XV e il XVI secolo, di emissione per lo più locale.

Appaiono invece del tutto anomali i quattordici pezzi rimanenti, ossia un fiorino in oro e tredici esemplari in lega d'argento battuti da zecche collocate tra le Fiandre e il regno di Francia. Il fatto che tutte le monete provengano dallo stesso macro-areale, siano grosso modo coeve e che siano state rinvenute in prossimità di uno scheletro all'interno della tomba 10, suggerisce che esse costituissero in origine un gruzzolo appartenente al medesimo individuo. Otto esemplari sono stati emessi da zecche asburgiche collocate nella regione fiamminga, sette a nome di Filippo I e uno del figlio e successore Carlo V. È poi presente un solo *stuiver* assegnabile alla zecca cittadina di Deventer. Le cinque monete rimanenti sono state coniate in area francese dai sovrani Carlo VII di Valois e Ludovico XII d'Orleans.

Composizione del gruzzolo di 14 es. dalla tomba 10:

- Filippo I d'Asburgo, fiorino, zecca di Antwerpen, 1500-06;
- Filippo I d'Asburgo, *stuiver*, zecca di Brugge, 1499-1503;
- Filippo I d'Asburgo, *stuiver*, zecca di Brugge, 1504-06;
- Filippo I d'Asburgo, 2 es. *Groot*, zecca di Mechelen, 1493-94;
- Filippo I d'Asburgo, *groot*, zecca di Brugge, 20 novembre 1493 – 14 maggio 1496;
- Filippo I d'Asburgo, *groot*, zecca di Dordrecht, 1505-06;
- Carlo V d'Asburgo, *groot*, zecca di Brugge, 1506-18;
- Città di Deventer, *stuiver*, zecca di Deventer, 1509;
- Carlo VIII di Valois, *blanc à la couronne*, zecca di Rouen, 24 aprile 1488;
- Carlo VIII di Valois, *blanc à la couronne*, zecca di Tournai, 24 aprile 1488;
- Carlo VIII di Valois, *blanc à la couronne*, zecca di Châlons-sur-Marne, 24 aprile 1488;
- Carlo VIII di Valois, *blanc à la couronne*, zecca di Bourges, 24 aprile 1488;
- Luigi XII d'Orleans, *blanc à la couronne*, zecca di Tarascon, 8 aprile 1498 – 31 dicembre 1515;.

Per BONA s.d., il numerario fiammingo costituisce una presenza del tutto eccezionale nel panorama della circolazione monetale milanese di questo periodo.

Nature of the site at the time of concealment or loss: castle / fortress

(H) Milano, dal territorio ("una piccola città industriale a pochi chilometri da Milano"), n.s. (ante 1908) (*dep.:* c. 1330)

Ripostiglio, con 289 AR+MI. Composizione:

- Milano, 130 denari imperiali (2 età comunale, 1254-1310; 120 Enrico VII di Lussemburgo, 1 Ludovico IV di Baviera come re, 1326-28; 7 Ludovico IV di Baviera come imperatore, 1328-30); 4 denari terzoli (età comunale, c. 1250-1330); 1 obolo (Ludovico IV di Baviera come re, 1326-28);
- Pavia, 4 denari mezzani (principalmente XIII secolo) e 75 denari imperiali (1254/6-c. 1330);
- Como, 18 denari imperiali (16 Enrico VII di Lussemburgo come imperatore, 1312-13; 2 Ludovico IV di Baviera, 1328-30);
- Cremona, 14 denari (Federico II), 2 oboli o mezzi denari;
- Brescia, 1 denaro con sant'Apollonio c. 1300-37);
- Novara, 3 denari imperiali con san Gaudenzio (prima metà XIV secolo), 2 oboli (post 1254);
- Piacenza, 21 denari (14 con punti e 8 con stella a 6 punte, post 1254);
- Parma, 2 denari (età comunale);
- Tortona, 1 denaro mezzano (età comunale, seconda metà XIII secolo);
- Chivasso, 3 denari imperiali (marchesi anonimi, 1305-11; forse Teodoro I Paleologo?);
- Ancona, 1 denaro;

- Arezzo, 1 denaro;
- Verona, 1 denaro piccolo;
- Ponzone, 1 denaro imperiale (Enrico e Corrado, seconda metà del XIII secolo fino al 1310; errata attribuzione alla zecca di Dego in GRILLO 1909; v. ora MEC 12);
- Dogliani, 1 denaro (Giovanni di Saluzzo, 1297-c. 1350);
- Vercelli, 1 denaro mezzano (a nome di Federico II, post 1255).

Bibl.: GRILLO 1909; VANNI 1997, p. 9; SACCOCCI 2009c, p. 96 n. 4; MEC 12, pp. 677-678 n. 31.

(SF) Milano, loc. Nosedo, chiesa dei santi Filippo e Giacomo, scavi 2013 (dep.: II – XVII sec.)

Nel corso delle indagini svoltesi nel 2013 nella chiesa dei Santi Filippo e Giacomo sono state rinvenute 20 monete: due di epoca romana e le restanti 18 databili ai secoli XV-XVII e riconducibili alla frequentazione post-medievale dell'area, in particolare all'uso dello spazio interno all'edificio di culto come luogo di sepoltura.

Le monete romane, un antoniniano dubitativamente ascritto alle emissioni di Aureliano e un AE2 dell'usurpatore Magnenzio, come anche altre cinque monete databili fra XV e XVII secolo, provengono da US 8, strato che sigillava la rasatura moderna del deposito stratigrafico probabilmente al fine della posa del pavimento in cotto US 1. Si tratta, dunque, di reperti in giacitura secondaria che però, insieme ad alcuni frammenti ceramici, pure in condizioni di residualità, suggeriscono una frequentazione già in età romana dell'area su cui sorgerà la chiesa dei Santi Filippo e Giacomo.

Se le monete da US 8 appaiono tutte in giacitura secondaria e possono provenire sia dai piani di calpestio eliminati per la realizzazione della pavimentazione in cotto US 1 sia dalle sottostanti sepolture, più significativo appare il rinvenimento di una trillina di Filippo II (1556-1598) in US 17B, piano di calpestio dell'atrio porticato, dal momento che questo pezzo offre un elemento di cronologia per la sua costruzione. Tutti i restanti 12 esemplari monetali provengono da 10 sepolture. Dall'analisi dei dati di scavo emerge come la deposizione delle monete, in uso in tutte le fasi del cimitero fra la metà del XV secolo e il XVI, non sia legata a una particolare classe di età: sono, infatti, state rinvenute in sepolture di bambini (tb 8, tb 14, tb 24, tb 28), subadulti (tb 19B, tb 20 – scheletro US 133) e adulti (US 28-scheletro US 103, tb 19A, tb 17, tb 30). Ricorrente è il rinvenimento presso il bacino o comunque nella parte inferiore del busto, dallo sterno in giù. In due casi (tb 8 e tb 30) la moneta è stata rinvenuta fra le mani mentre in altri tre (tb 19 A, tb 20, tb 28) sembra verosimile ipotizzare una analoga posizione per la prossimità fra il punto di rinvenimento e le mani. Nella tb 19A la moneta era al centro della colonna vertebrale mentre il braccio destro era flesso al petto; mentre nelle tb 20 e 28 le braccia erano invece piegate al bacino a ridosso del quale erano le monete.

Composizione:

- fase 3A, tomba 20

- denaro MI, Giovanni Galeazzo Sforza e Ludovico Maria Sforza (1481-94), zecca di Milano;

- tomba 28

- moneta MI non identificabile, zecca di Milano (?);

- tomba 30

- terlina MI, Giovanni Galeazzo Maria Sforza con Ludovico Maria Sforza (1481-94), zecca di

- Milano;
- fase 3B, tomba 19B
 - denaro MI, Luigi XII di Francia (1500-12), zecca di Milano;
 - fase 4, tomba 24
 - bisso MI, cantone di Uri, Schwyz e Unterwalden (XVI secolo), zecca di Bellinzona;
 - fase 5, tomba 19A
 - terlina MI, Filippo II di Spagna (1556-98), zecca di Milano;
 - fase 6, US 28
 - moneta MI non identificabile, zecca di Milano (XV secolo);
 - fase 6, tomba 8
 - sesino MI, Carlo V d'Asburgo (1535-56), zecca di Milano;
 - fase 6, tomba 14
 - moneta MI non identificabile (XV secolo?);
 - fase 7, tomba 17
 - moneta non identificabile;
 - fase 8, US 17B
 - terlina MI, Filippo II di Spagna (1556-98), zecca di Milano;
 - fase 9, US 8
 - antoniniano, Aureliano (?), zecca non identificabile;
 - AE2, Magnenzio (primavera 351 – 26 settembre 352), zecca di Roma;
 - terlina MI, Galeazzo Maria Sforza con Bianca Maria Visconti (1466-68), zecca di Milano;
 - terlina MI, Galeazzo Maria Sforza (1466-78), zecca di Milano;
 - terlina MI, Filippo II di Spagna (1556-98), zecca di Milano;
 - altre
 - grano, Filippo IV di Spagna (1644-47), zecca di Napoli;
 - moneta MI non identificabile, zecca di Milano (XV secolo);
 - 2 monete MI non identificabili, XV secolo.

(oth) Milano, piazza sant'Ambrogio, scavi 2005, 2006-08, 2011-12 (dep.: III sec, d.C. c. 1861/7)

Da scavi in piazza sant'Ambrogio a Milano, circa un centinaio di monete.

esame preliminare degli esemplari, non ancora sottoposti a restauro, ha evidenziato come la maggior parte sia databile dall'età medievale a quella moderna, col pezzo più recente che appartiene alle emissioni di Vittorio Emanuele II re d'Italia ed è databile fra il 1861 e il 1867. Circa un quarto delle monete, a causa delle incrostazioni che le ricoprono, non fornisce ancora elementi utili per la datazione.

La frequentazione di età romana dell'area trova poche attestazioni monetali fino al III secolo d.C., mentre un numero maggiore di esemplari è ascrivibile alle emissioni del IV e dei due secoli successivi. Le vicende legate alla frequentazione, tra l'altro con la creazione di cave per l'estrazione di sabbia e ghiaia in epoche diverse, ha prodotto più rimaneggiamenti del deposito archeologico privandoci di elementi fondamentali per la comprensione delle modalità con cui le monete sono entrate a far parte del deposito di archeologico e, di conseguenza, del loro significato al momento dell'uscita dalla circolazione. Tale situazione ha prodotto più casi in cui le monete appaiono residuali, ovvero più antiche rispetto alla datazione del contesto di rinvenimento. Particolarmente chiaro è il caso dei due pezzi provenienti dal riempimento (US 124) di una cava di età moderna e databili, in via preliminare, l'uno al periodo fra V e VI secolo e l'altro all'età medievale.

Anche nel caso delle sepolture, i contesti risultano purtroppo rimaneggiati come illustra il caso delle monete dalla buca di spoglio della tomba 21 che danneggia anche la limitrofa tomba 19. Nel

riempimento, US 181, erano cinque monete che sembrano essere fra loro cronologicamente coerenti e che potrebbero provenire dal corredo deposto nella tomba 21 o nella 19 se non sono, invece, da ascrivere alla fase di spoglio della necropoli. Nel caso in cui siano da attribuire a un corredo sepolcrale non si può non collegarle alla pratica di deporre gruzzoli monetali a fianco dei defunti, uso che, attestato a partire dal II-I secolo a.C., sembra divenire più frequente con l'età tardoantica.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: necropolis / cemetery

(SF) Parabiago, loc. San Lorenzo, necropoli, n.s. (*dep.: n.s.*)

In tomba, monete romane in bronzo e oricalco ("oboli di Caronte"). Notati: assi di Augusto, Tiberio, Claudio, Caligola, Traiano, Faustina figlia (?), principalmente della zecca di Roma; sesterzio di Caligola, zecca di Roma.

Da un inventario dattiloscritto degli ingressi al Museo Civico "G. Sutermeister" di Legnano (copia posteriore, del 1955?), al n. 1316, si legge: "1 moneta Medio Bronzo Diva Augusta Faustina con una DIOTA sul capo, moneta del 176 commemorat. della sua morte [...] da tombe 17-18-19".

Il ritrovamento sarebbe anteriore al 1955, perché i materiali entrati nel museo dopo quella data sono registrati in una parte successiva dell'inventario.

Non si ha la certezza che sia la stessa moneta indicata in MARTINI, VISMARA 1988, p. 181 n. 64.

Cons.: Legnano, Museo Civico "G. Sutermeister".

Bibl.: VISMARA, MARTINI 1988, pp. 178-182.

Nature of the site at the time of concealment or loss: necropolis / cemetery

(H) Peschiera Borromeo, loc. Bettola, n.s. (paulo ante 5 settembre 1755) (*dep.: n.s.*)

In MORBIO 1870, pp. 171-172, si fa riferimento ad alcuni manoscritti originali nei quali compaiono cenni a ritrovamenti di monete. Uno di questi consiste in un decreto di Francesco III d'Este, duca di Modena e amministratore della Lombardia, col quale viene ordinato al Magistrato Camerale di pagare 202 lire al sindaco fiscale in rimborso di altrettante da lui spese nell'ambito di una raccolta di informazioni circa il ritrovamento *di diverse monete antiche* avvenuto a Bettola, comune di Peschiera.

Il documento, firmato dallo stesso duca e controfirmato dai segretari, è datato 5 settembre 1755, quindi il ritrovamento è avvenuto poco prima.

Nessuna indicazione sulla natura delle monete.

Cons.: Disperso, in parte già poco dopo il momento della scoperta.

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(SF) Trezzo sull'Adda, loc. San Martino, necropoli longobarda, 1976-78 (dep.: VII sec.)

Necropoli longobarda, tra le maggiori nel bacino dell'Adda, con sepolture rinvenute tra il 1976 e il 1978, in due aree distinte. In quella in loc. San Martino, nucleo di cinque sepolture di guerrieri di alto rango, con corredi funerari particolarmente ricchi e significativi sia per la dotazione di armi, sia per gli anelli a sigillo in oro. Anche le strutture funerarie, con pareti e coperture in lastre monolitiche, si distinguono per l'elevata qualità costruttiva.

Segnalata moneta bizantina VA in due sepolture:

- tomba 1 (primo decennio del VII sec.): *solidus* AV Focas, zecca di Costantinopoli, 607-608 d.C. (MORRISSON 1970, 8/Cp/AV/02-10, off. ?);
- tomba 5 (secondo trentennio del VII sec.): *solidus* AV, Foca con il figlio Eraclio Costantino, zecca di Ravenna, 613-631 d.C. (MORRISSON 1970, 10/Rv/AV/07-10, off. H), deposto vicino al capo del defunto.

Cons.: Milano, Museo Archeologico.

Bibl.: n.s. 1986; ARSLAN 1994, p. 517; DE MARCHI 2000, p. 171; ARSLAN 2004i, n. 4060; DE MARCHI 2011, pp. 63, 82 (ma errata classificazione del *solidus* della tomba 5); GIOSTRA 2014, p. 168 (parla di solido di Foca in tomba 1 e solido di Eraclio vicino al capo del defunto in tomba 5).
Da visita presso il Museo Archeologico di Milano dell'8 maggio 2022.

(H) Concorezzo, loc. Cascina di Rancate, 1913 (dep.: c. 1310 (MEC 12, p. 674: post 1312; DE BENETTI 2019a e 2024: post 1322))

Ripostiglio scoperto in occasione di uno sterro d'argilla a Cascina di Rancate, con 6 AV e 292 AR+MI, quel che resta probabilmente di un nucleo originale di oltre 400 esemplari.

Composizione:

- Firenze, 6 fiorini AV (1252-1310): ma per DE BENETTI (2019a, p. 302; 2024), solo 4 di Firenze, il resto imitazioni con stessa legenda *FLORENTIA* dell'originale;
- Cremona, 2 grossi con sant'Imerio (dal 1299 c.);
- Pavia, 1 grosso con san Siro (dal 1299 c.);
- Milano, 3 grossi ambrosini (ante 1298/9), 9 grossi ambrosini minori (c. 1298/9-1310), 1 grosso maggiore di Enrico VII di Lussemburgo con sant'Ambrogio e i due santi copatroni (1312-13);
- Arezzo, 1 grosso bolognino;
- Bologna, 2 grossi bolognini;
- Merano, 1 grosso aquilino;
- Piacenza, 3 grossi;
- Venezia, 15 grossi ripartiti, in maniera non meglio nota, tra Marino Morosini (1249-53), Ranieri Zen (1253-68), Lorenzo Tiepolo (1268-75), Jacopo Contarini (1275-80) e Pietro Gradenigo (1289-1311);
- 199 grossi tornesi di Filippo IV di Francia (1285-1314), tra cui 1 à *fleur-de-lis*.

In dettaglio per quanto riguarda i 6 fiorini AV:

- zecca di Firenze, periodo dei maestri di zecca sconosciuti (1252-1303)
 - ca. 1291-1299 (corona): 1 es.
 - ca. 1291-1299 (compasso): 1 es.
 - 1300/II (bordone): 1 es.
- zecca di Firenze, periodo dei maestri di zecca prevalentemente conosciuti (dal 1303/II)

- 1322/II (monte con foglia di fico sopra): 1 es.
- zecca indeterminata (imitazioni “non firmate” del fiorino di Firenze)
- post 1307 (imitazione del segno “guastada” del 1307/I): 1 es.
- post 1308 (imitazione del segno “due chiodi decussati” del 1308/II): 1 es.

Cons.: In parte disperso prima dell’arrivo delle autorità, i 6 AV e 292 AR superstiti presso le Civiche Raccolte Numismatiche di Milano.

(H) Monza, duomo, sarcofago della regina Teodolinda, 1941 (dep.: c. 1250 o 1308)

Dalla ispezione del sarcofago della regina longobarda Teodolinda realizzata nel 1941, 8 AR + 9 MI, tutti databili alla metà del XIII secolo o poco prima.

Composizione:

- monete AR

- Novara, 1 denaro scodellato (post c. 1254);
- Pavia, 3 denari imperiali (1254/6-1310);
- Piacenza, 4 denari imperiali (XIII secolo);

- monete MI

- Cremona, 2 denari inforziati (1155-1330);
- Milano, 2 denari terzoli scodellati con legenda *henricvs* (probabilmente databili al 1218-50);
- Pavia, 4 denari mezzani (c. 1220-50);
- Parma, 1 denaro a nome di Federico II (1220-50).

Data di deposizione incerta. Forse 1308, in occasione di una traslazione (documentata) del corpo della regina Teodolinda. Sulla base dei materiali, però, la data potrebbe essere anticipata al 1250 circa.

In GIOSTRA 2020, p. 543 si propende invece per una deposizione progressiva (*Le 17 monete recuperate dall'avello marmoreo, coniate fra il XII e l'inizio del XIV sec. in zecche differenti (Cremona, Milano, Parma, Pavia, Novara, Piacenza), sembrano riflettere la venerazione sviluppatasi nel corso del medioevo sulla sepoltura della regina*), ma l'affermazione è forse condizionata da una non adeguata conoscenza delle datazioni più aggiornate delle monete.

Bibl.: MERATI 1963, p. 3; CHIARAVALLE 1987a; SACCOCCI 1999, p. 87; MEC 12, p. 678 n. 34; GIOSTRA 2020, p. 543 (cita).

(H) Monza, Porta de' Gradi, 1897 (dep.: c. 1250)

Ripostiglio, con c. 300 AR (e BI?), di cui 168 esaminate, *tutti denari del peso di circa un grammo e mezzo l'uno, ben conservato, anzi fiori di conio* (riconoscibili nei grossi da 4 denari imperiali e loro equivalenti) rinvenuto nella cavità di un mattone di una vecchia casa nei pressi di Porta de' Gradi.

Tra le monete esaminate si segnalano:

- Bergamo, 62 grossi (Federico II, 1220-50);
- Como, 33 grossi (Federico II: 7 con legenda *+CIVITAS CVMANA*, 33 con *CVMANVS+*);
- Cremona, 10 grossi con *F* e croce allungata (Federico II);
- zecca sconosciuta, 2 grossi imperiali con testa coronata e croce (Federico II);
- Milano, 4 grossi a nome di *henricvs*;
- Modena, 28 grossi con *M* gotica (dal 1240);
- Parma, 15 grossi (Federico II);

- Pavia, 5 grossi (c. 1220-50);
- Reggio Emilia, 9 grossi (Nicolò Maltraversi, 1233-43).

(uns) Vimercate, c. 1929-33 (dep.: IV sec. d.C.)

In un sepolcro a inumazione databile al IV secolo d.C., diverse monete romane. Notate:

- medio bronzo di Antonino il Pio, 160 d.C.;
- moneta *legionaria* di Gallieno, zecca di Milano, 262 d.C.;
- piccolo bronzo di Costantino Cesare (325-330 d.C.)
- 2 piccoli bronzi di Costanzo Gallo (351-354 d.C.);
- piccolo bronzo di Costantino con *Urbs Roma*, 355-357 d.C.;
- 9 piccoli bronzi di Costanzo II;
- 2 medi bronzi di Graziano.

Le monete, gli altri oggetti e il sarcofago in serizzo furono depositati presso i musei del Castello Sforzesco di Milano.

(oth) Borgoratto Mormorolo, chiesa dei santi Cornelio e Cipriano, n.s. (dep.: post 1922)

Nel corso delle indagini archeologiche condotte nella chiesa dei santi Cornelio e Cipriano a

Borgoratto Mormorolo, otto monete:

- 1 quattrino di Ercole II d'Este, zecca di Reggio Emilia, dalla ricarica sottostante al pavimento in piastrelle di cotto settecentesco;
- un deposito costituito da 7 AE del Regno d'Italia di XIX-XX secolo, rivenute durante il sollevamento di una porzione del secondo gradino al presbiterio (US 71) mescolate alla terra, disposte una vicino all'altra come se fossero cadute da una mano:
 - 1 es. da 5 centesimi 1861 o 1867, zecca di Milano o Napoli, Vittorio Emanuele II di Savoia (1861-78);
 - 3 es. da 5 centesimi, millesimo e zecca illeggibili, Vittorio Emanuele II di Savoia (1861-78);
 - 1 es. da 1 centesimo, millesimo e zecca illeggibili, Vittorio Emanuele II di Savoia (1861-78);
 - 1 es. da 5 centesimi 1922, zecca di Roma, Vittorio Emanuele III di Savoia (1900-46);
 - 1 es. da 5 centesimi, millesimo e zecca illeggibili, Vittorio Emanuele III di Savoia (1900-46).

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(SF) Borgoratto Mormorolo, chiesa dei santi Cornelio e Cipriano, scavi 2016 (dep.: XV-XVIII sec.)

Durante la campagna di scavo del 2016 sono state rinvenute due monete di età viscontea (XIV-XV secolo), provengono da strati collocati più in profondità nella sequenza stratigrafica rispetto a quelli indagati nel 2006 (v. ritrovamento n. 9325):

- 1 denaro imperiale MI, Gian Galeazzo Visconti (1382-1402), zecca di Milano, rinvenuta nella sezione più superficiale del riempimento (US 142) della trincea di fondazione del perimetrale Sud del presbiterio (US 137), quasi a contatto con la sua risega;
- 1 denaro minuto di Filippo Maria Visconti (1421-35), zecca di Genova, proveniente dal terreno di riempimento della tomba 1, posta al centro del presbiterio. Poiché i dati stratigrafici inquadrano la sepoltura nel corso del XVIII secolo, è probabile che il denaro fosse contenuto nel terreno impiegato o movimentato per chiudere la tomba e sfuggito agli operai impegnati nella sua realizzazione.

(H) Chignolo Po, n.s. (ante 1896) (*dep.*: c. 1400 (fine XIV sec. per ZAORAL 2017))

AMBROSOLI 1897a, p. 539: *Alla fine del settembre scorso, a Chignolo Po (Prov. di Pavia), in un fondo di proprietà del Sig. March. Luigi Cusani Gonfalonieri, durante i lavori agricoli fu scoperto un ripostiglio di monete medioevali, che fortunatamente poté essere raccolto nella sua quasi totalità per cura del Nob. Ing. Antonio Castiglione. Il tesoretto, poco numeroso di pezzi, ma, per compenso, di elettissima composizione, constava quasi esclusivamente di monete d'oro, alcune fra le quali assai rare [...] Il nascondimento di questo bel ripostiglio si può evidentemente fissare intorno alla fine del Sec. XIV.*

Elencate 83 monete in totale (ma per MEC 12, p. 672 solo 81, con 54 AV + 27 AR):

- zecca di Milano: 1 ducato AV di Galeazzo II Visconti (1354-78), 1 ducato AV di Bernabò Visconti (1354-85), 5 ducati AV di Gian Galeazzo Visconti (1385-1402), 27 pegioni AR di età viscontea;
- zecca di Pavia: 2 pegioni AR di Galeazzo II Visconti (1359-78);
- zecca di Venezia: 19 ducati AV (1 di Bartolomeo Gradenigo (1339-1342), 1 di Giovanni Dolfìn (1356-1361), 5 di Andrea Contarini (1368-1382), 1 di Michele Morosini (1382), 11 di Antonio Venier (1382-1400));
- zecca di Genova: 12 genovini AV (3 di Simone Boccanegra (1 del 1339-44, 2 del 1356-63), 3 di Gabriele Adorno (1363-70), 5 di Nicola Guardo (1378-83), 1 di Antoniotto Adorno (1383-84));
- zecca di Firenze: 3 fiorini AV;
- zecca di Bologna: 7 ducati AV pontifici anonimi;
- zecca di Roma: 3 ducati AV del Senato Romano (1350-1438/9);
- zecca di Avignone: 1 fiorino AV di papa Clemente VI (1348-52);
- Boemia: 1 fiorino AV di Carlo IV imperatore (1346-78), zecca di Praga;
- Ungheria: 1 ducato AV di Sigismondo imperatore (1387-1437).

Per MEC 12, p. 672 gli AV sarebbero “fiorini”, ma è più corretto denominarli “ducato” per coerenza con le fonti documentarie.

Cons.: Disperso. Il ducato di Galeazzo II Visconti e quello di Bernabò Visconti per Milano sono confluiti nella collezione di Vittorio Emanuele III di Savoia (ora presso il Museo Nazionale Romano) a seguito del dono del marchese Cusani Confalonieri (v. BAZZINI, TOFFANIN 2014, n. 548; GIANAZZA, TOFFANIN 2014, n. 567). Si tratta degli unici due esemplari sicuramente riconducibili al ritrovamento individuati finora.

Bibl.: AMBROSOLI 1897a (prima notizia); CESANO 1925a, p. 166; HUSZÁR 1970-72, p. 81 n. 5; STAHL 2000, p. 438 n. 39; BAZZINI, TOFFANIN 2014, n. 548 (ducato AV di Galeazzo II Visconti per Milano); GIANAZZA, TOFFANIN 2014, n. 567 (ducato AV di Bernabò Visconti per Milano); MEC 12, pp. 672-673 n. 10a; ZAORAL 2017, n. 5 (cita per la presenza di un fiorino boemo).

(SF) Gambolò, loc. Belcreda, 2018 (dep.: VII sec.)

Nel 2018, in occasione di lavori per la costruzione di un metanodotto, viene scoperta una necropoli longobarda. Successivamente oggetto di scavo stratigrafico, risulta consistente in 27 fosse scavate in un dosso sabbioso lungo la sponda occidentale del fiume Ticino, disposte su tre file parallele. Le tombe sono orientate est-ovest e i defunti (8 uomini, 17 donne, oltre a 2 di genere non identificabile, forse ragazzi o bambini) o disposti con il capo ad ovest.

In tomba 16 (sepoltura femminile), segnalata collana composta da vaghi in pasta vitrea policroma e in ambra, con due monete forate in argento/bronzo non identificabili con sicurezza ma di età romana imperiale (possibile moneta di Settimio Severo, 193-211).

Nelle tombe femminili sono stati rinvenuti gioielli come orecchini o elementi di collana in ambra e pasta vitrea colorata. In quelle maschili compaiono spesso guarnizioni di cintura reggiarmi, punte di freccia e lancia, asce e *scrmmasax*, oppure spade con il proprio fodero. Un vasetto in ceramica è quasi sempre presente ai piedi del defunto.

Cons.: Vigevano, Museo Archeologico Nazionale.

(H) Garlasco, 1909 (dep.: post 1312 (?))

RICCI 1910: *Nei mesi scorsi giunse alla Sovrintendenza archeologica di Pavia, e per mezzo della Prefettura di Pavia al Medagliere Nazionale di Brera, un tesoretto di 131 pezzi d'oro e d'argento rinvenuti a Garlasco (Lomellina). Esaminati dalla Direzione del Medagliere, si riconobbe constare delle seguenti monete. Monete d'oro: 1 zecchino del doge Pietro Gradenigo (1289-1311) e due genovini del periodo di Corrado imperatore; Monete in argento: 1 grosso, o matapan, di Giovanni Dandolo (1280-89), 1 di M. Morosini (1249-53), 6 di Pietro Gradenigo (1289-1311), 1 denaro di Cremona con S. Imerio (II Repubblica) e 1 di Parma, comune, con S. Ilario, 1 scaligero di Verona (1259-1329), 1 grosso di Pisa, sotto l'Imperatore, 2 fiorini di Firenze, 1 soldo o ambrosino della I.a Repubblica di Milano, un quarto di tornese, 7 tornesi di Filippo il Bello, 3 tirolini del conte Mainardo e 2 denari di Costanza di Sicilia. Inoltre s'aggiungeva un gruppo di ben cento grossi e denari corrosi dal tempo, e quasi indecifrabili, di Milano, Piacenza, Cremona, Pavia e di altri comuni medioevali del periodo di Enrico VII fino a Comune libero inoltrato. La metà del ritrovamento, che spettava allo Stato, fu dall'On. Direzione delle Antichità e B. Arti, donata alle collezioni del Museo Numismatico di Milano e l'altra metà fu dalla Direzione stessa del Museo acquistata, affinché non andasse dispersa, togliendo ogni pregio topografico, archeologico e numismatico al ripostiglio.*

Composizione (secondo BALDASSARRI, RICCI 2013): monete grosse in argento di Milano, Tortona, Parma Arezzo, Firenze e Pisa, oltre a grossi di Venezia, Verona e Merano, pierreali di

Messina, tornesi e frazioni di tornesi francesi, tutti databili tra la metà del XIII e la metà circa del XIV secolo. Vi sono inoltre 2 denari di Asti, 8 di Milano, 1 di Mantova, 5 di Parma ed 1 di Ravenna; 2 mezzi denari di Ivrea, 13 mezzanini di Cremona, 2 mezzani di Piacenza e 11 di Pavia, inquadrabili tra fine XII e XIV secolo. La moneta più recente è un mezzo grosso di Cremona per Cabrino Fondulo, datato 1406-1420, mentre la più antica è un *miliaresion* per Niceforo II Foca, che costituisce l'unico pezzo in argento anteriore al Duecento. Per la zecca di Genova: 13 denari databili tra primi decenni del XIII ed inizi XIV secolo; 2 genovini d'oro +•I•A•N•V•A•P•.

Composizione (secondo MEC 12, pp. 675-676):

- monete AV

- Genova, 2 fiorini (databili agli anni Settanta-Ottanta del XIII secolo);
- Venezia, 1 ducato (Pietro Gradenigo, 1289-1311);

- monete AR

- Arezzo, 1 grosso bolognino (XIII-XIV secolo);
- Firenze, 2 fiorini grossi o popolini (1305-08);
- Merano, 3 grossi tirolini (a nome di Mainardo II, 1258-95, ma conati nel 1274-1306)
- Messina, 2 pierreali (Pietro I d'Aragona e Costanza, 1282-85);
- Parma, 2 grossi (XIII secolo);
- Pisa, 1 grosso aquilino minore (post 1270);
- Tortona, 1 frammento di grosso da 6 imperiali con le stelle (post 1254);
- Venezia, 7 grossi (1 Marino Morosini, 1249-53; 1 Giovanni Dandolo, 1280-89; 5 Pietro Gradenigo, 1289-1311);
- Verona, 1 grosso tirolino (Cangrande, 1311);

- monete BI

- Asti, 4 denari (a partire dagli anni Sessanta del XIII secolo);
- Cremona, 3 denari inforziati e 10 denari imperiali con le stelle (post 1254), 1 sesino o quattrino (1406-20, probabilmente intrusivo);
- Genova, 14 denari (circa anni Settanta-Ottanta del XIII secolo);
- Ivrea, 2 denari mezzani (seconda metà del XIII secolo);
- Mantova, 1 denaro mezzano scodelato (1153-1257);
- Milano, 8 denari imperiali con rosette (1298/9-1310), 6 grossi ambrosini minori (1298/9-1310);
- Parma, 5 denari (1302);
- Pavia, 4 denari mezzani o oboli, 8 denari imperiali (c. 1254-1310);
- Piacenza, 28 denari imperiali, di cui 12 con le stelle (seconda metà del XIII secolo),
- 1 *miliaresion* di Niceforo II Foca (963-69);
- 7 *gros tournois* (?) e 1 *mailles tierce* (?) di Francia (Filippo IV, 1285-1314).

Elevata concentrazione di pezzi emessi tra il 1280 e il 1330 circa, ma la presenza del mezzo grosso di Cabrino Fondulo – se non intrusivo – obbligherebbe a spostare la data di occultamento del ripostiglio al 1420 circa.

In MEC 12, p. 675 si propone una datazione *after 1312*, annotando *all [pieces] but one datable up until the early fourteenth century* e ritenendo la moneta di Cremona del XV secolo *probably intrusive*.

Cons.: Milano, Civiche Raccolte Numismatiche. Solo 102 pezzi (3 AV + 57 AR + 42 BI) dei 131 inizialmente ritrovati oggi noti, i rimanenti dispersi. In base a quanto pubblicato in MARTINI, CHIARAVALLE, TORCOLI 1987, pp. 18, 86, però, i denari di Asti risultano 4 (grammi 0,60; 0,55; 0,42; 0,31) e il pezzo di Tortona è una frazione di grosso (gr. 0,66).

Bibl.: RICCI 1910a; MAGNAGUTI 1940, p. 130; SACCOCCI 1982, p. 286 n. 8; CHIARAVALLE 1984, pp. 575-576; MARTINI, CHIARAVALLE, TORCOLI 1987, pp. 18 (nn. 11-14), 86 (n. 10); CHIARAVALLE 1988; CROCICCHIO, FUSCONI, DE MARCHI 1992, p. 13; ARSLAN 2004i, n. 3660 (cita solo la moneta bizantina); SACCOCCI 2004, p. 18 n. 14; BALDASSARRI, RICCI 2013, p. 294; MEC 12, pp. 675-676 n. 22 (come *Garlasco Lomellina*); ODDONE 2022, n. 16 (come scoperto nel 1910, cita per la presenza di monete di Asti).

(H) Oliva Gessi, n.s. (dep.: post 300-303 d.C.)

Il ripostiglio di Oliva Gessi è costituito allo stato attuale da un antoniniano di Aureliano precedente alla sua riforma e da 529 *nummi* della prima tetrarchia in lega di rame argentato, emessi tra il 294 e il 300/303 d.C. Al nucleo conservato presso la Soprintendenza per i Beni Archeologici della Lombardia vanno aggiunti 12 *nummi* consegnati come premio di rinvenimento al proprietario campo e 19 altri *nummi*, finiti in collezioni private, per un totale di 561 pezzi.

In ABRAM, ARSLAN 2013 si ritiene che una parte delle monete, difficilmente quantificabile, sia stata asportata dal tesoretto originario.

Cons.: Milano, Soprintendenza per i Beni Archeologici della Lombardia (530 pezzi). Altri 31 pezzi in collezioni private.

Bibl.: ABRAM, ARSLAN 2013.

(H) Pavia, n.s. (XV sec.?) (dep.: n.s.)

In MORBIO 1870, pp. 171-172, si fa riferimento ad alcuni manoscritti originali nei quali compaiono cenni a ritrovamenti di monete. In uno di questi manoscritti si riporta che un certo Rayneri Torto, nel riedificare a Pavia una casa in precedenza posseduta da *un sartore del duca vegghio, se ritrovato una olla piena di ducati: li quali dicano essere di grande peso. Et già se ne*

cominciato a spendere per XLV grossi l'uno.

Nessuna indicazione sulla natura delle monete né sull'epoca della scoperta, ma per il Morbio (cit., p. 172) il documento che riporta la notizia sarebbe da datare *certamente* alla seconda metà del XV secolo. Il *duca veghio* sarebbe per lui Filippo Maria Visconti (1412-47).

(H) **Pavia, corso Strada Nuova, angolo via Calatafimi, 1934** (*dep.:* c. 892)

Nel corso dei lavori di posa di cavi telefonici e radiofonici in corso Vittorio Emanuele a Pavia, ripostiglio con 360 monete AR e frammenti (ora 272) di epoca carolingia:

- c. 240 denari AR Carlo di Grosso, Guido da Spoleto e Berengario I re, zecche di Milano e

Pavia (e forse Verona);

- 11 *antiquiores* AR: 1 di papa Nicolò I con Ludovico II, 10 di papa Formoso con Guido da Spoleto;
- 1 es. Nicolò I con Ludovico II, zecca di Roma;
- 10 es. Formoso con Guido da Spoleto, zecca di Roma.

In "Rassegna Numismatica" 5-6 (1935) si parla di *un blocchetto di monete di rame, delle quali l'ossidazione aveva fatto un tutto unico*, ritenendo l'occultamento da riferire al periodo delle invasioni degli Ungari. In realtà, la data di deposizione stimabile (c. 892) anticipa di qualche anno le incursioni ungare.

Gli scavi hanno portato alla luce tracce di costruzioni antiche, di pavimentazione stradale ritenuta risalente all'epoca dei Goti e di altra romana nel punto in cui si riteneva vi fosse l'incrocio tra cardo e decumano.

Cons.: Pavia, Musei Civici.

(H) Pavia, viale Montegrappa, XIX sec. (o 1943-45?) (dep.: c. 1300 (c. 1290 per DAY, DE BENETTI 2018 e DE BENETTI 2019a))

Ripostiglio, con 8 AV, 21 AR e altre AR+MI (numero non precisabile). Segnalati 8 fiorini AV di Firenze (1252-1310), 20 *gros tournois* di Francia à la O ronde e 1 *gros tournois* d'Olanda.

Segnalati:

- zecca di Firenze, fiorini con santo in stile evoluto (ca. 1267-1303)

- ca. 1267-ca. 1270 (quadrato, var. con punto). 1 es.
- ca. 1270-ca. 1285 (fogliolina capovolta): 1 es.
- ca. 1270-ca. 1285 (pigna): 2 es.
- ca. 1270-ca. 1285 (ghianda): 1 es.
- ca. 1270-ca. 1285 (rocco): 1 es.
- ca. 1270-ca. 1285 (pesce): 1 es.
- ca. 1270-ca. 1285 (fiore): 1 es.

I grossi tornesi appartengono a emissioni precedenti il 1295, quando fecero la loro apparizione le emissioni caratterizzate dalla O lunga, e potrebbero precedere anche di diversi anni tale data. Tra essi sono presenti un esemplare di Floris V conte d'Olanda (1256-1296) e un esemplare di imitazione datato non oltre il 1290.

Per DE BENETTI (2024, p. 30), molto probabilmente si tratta del ripostiglio rinvenuto a Pavia tra il 1943 e il 1945 da alcuni operai durante lavori stradali e conosciuto grazie alla pubblicazione di una breve nota nell'immediato dopoguerra. Mancano invece dati sulla consistenza complessiva.

Cons.: Milano, Civiche Raccolte Numismatiche (gli 8 fiorini AV e i 21 *gros tournois* AR).

Bibl.: PHILLIPS 1997, pp. 299-301, 307-308, 326-327; DAY, DE BENETTI 2018, p. 130 nota 66 (cita in riferimento al ripostiglio di Willanzheim – v. ritrovamento n. 9723 – dando come chiusura c. 1290); DE BENETTI 2019a, n. 4 (dando come chiusura ca. 1290); DE BENETTI 2024, Appendice D n. 4 (dep. c. 1290).

(SF) Pieve del Cairo. podere Cascina Mercurina, 1869 (dep.: n.s.)

Nel podere Cascina Mercurina a Pieve del Cairo si è scavato (1869) un piccolo cimitero con scheletri [...] giacenti su uno strato di ciottoli [...]. I corredi erano composti da punte di lancia,

umboni di scudo, spade in ferro, monete ad uso ciondolo, fili lamellari aurei da broccato, un paio di orecchini e cinque croci in oro decorate a sbalzo, due delle quali perdute. In tre casi la decorazione era a motivi zoomorfi intrecciati con maschere umane, sui quattro bracci, nel tondo centrale raffigurazione di cervo in medaglione, nel secondo caso di colombe (?), nel terzo intrecci zoomorfi completati al centro da una rosetta.

(H) San Martino Siccomario, loc. Cascina Santa Croce, 1881 (per BALDASSARRI 2009) o 1886 (per BRAMBILLA 1887) (*dep.:* prima metà – metà XIII secolo)

Nel 1881 (per BALDASSARRI 2009) o nel 1886 (per BRAMBILLA 1887), durante lavori di piantumazione della riva del fiume Ticino, ripostiglio con c. 10.000 AR+MI dentro un vaso di terracotta grezza, sepolto alla profondità circa di un metro sulla costa del fiume. Solo c. 2.000

esaminate, in prevalenza denari, mezzi denari e grossi di Pavia, databili tra 1220 e 1250.

Composizione (solo i pezzi esaminati):

- Asti, alcuni denari (per BALDASSARRI 2009 datati tra la seconda metà del XII e gli inizi del XIII secolo);
- Brescia e Mantova, c. 600-700 (per BALDASSARRI 2009, p. 355) o c. 300 (per MEC 12, p. 682) denari della fine del XII-metà circa XIII secolo;
- Cremona, alcuni denari denari inforziati e denari cremonesi (per MEC 12, p. 682: ante 1254; per BALDASSARRI 2009, p. 355: datati tra la seconda metà del XII e gli inizi del XIII secolo);
- Genova, alcune decine di denari e mezzi denari, apparentemente del tipo CVNRAD REX, con pesi corrispondenti ad esemplari della seconda parte del XII/inizi XIII secolo; 1 grosso di Genova di I tipo + •IA•NV•A• «da 6 denari» del peso di 1,70 g;
- Milano, per MEC 12, p. 682: c. 100 denari terzoli e 1 grosso; per BALDASSARRI 2009, p. 355: c. 500 denari per Enrico e Federico Hohenstaufen;
- Parma, 1 denaro (Ottone IV, 1198/1208-1218);
- Pavia, c. 1.000 esemplari, principalmente denari mezzani con alcuni oboli e grossi (1220-50);
- Francia, alcuni *deniers tournois* (Luigi IX, 1226-70).

Datazione dei nominali non sempre affidabile: molto sommaria quella proposta in BRAMBILLA 1887, più accurata quella in BALDASSARRI 2009, ma comunque da rivedere alla luce degli studi più recenti, specie per le zecche diverse da quella genovese.

Da esame diretto degli esemplari entrati a far parte della collezione di Camillo Brambilla, si riscontra che le monete di Cremona hanno uno stile piuttosto recente. Se si prende come riferimento la forma della lettera A impiegata nelle legende, si osservano solo esemplari contraddistinti da una A chiusa, che sul piano stilistico dovrebbe corrispondere alle emissioni più recenti di tutta la serie. La datazione di queste tipologia è dunque riconducibile alla prima metà del XIII secolo, e dunque complessivamente compatibile con le indicazioni finora formulate in corrispondenza delle monete di Pavia.

Per una discussione in merito alle monete di Cremona in questo ripostiglio si veda: <http://www.lamoneta.it/topic/145759-per-parlare-un-po-di-cremona/?p=1668326> (ultima visita: 25/1/2016).

Cons.: Disperso. Alcune monete sono entrate a far parte della collezione di Camillo Brambilla, oggi presso i Civici Musei di Pavia.

Bibl.: BRAMBILLA 1887; DESIMONI 1890, p. XX; STAHL 2001, p. 327; BALDASSARRI 2009, p. 355; BALDASSARRI, RICCI 2013, p. 294; RIZZONELLI 2014 (cita); MEC 12, p. 682 n. 57 (*some of the coins examined by authors*); RIZZONELLI 2021, pp. 290, 305 (cita in riferimento al ritrovamento di Cisano Bergamasco – n. 6571); ODDONE 2022, n. 17 (cita per la presenza di monete di Asti).

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: necropolis / cemetery

(H) Santa Giuletta, chiesa parrocchiale di san Colombano, 26 giugno 1978 (dep.: post 1858)

Durante i lavori di sterro nel cortile dell'oratorio della chiesa di san Colombano a Santa Giuletta, in vaso apodo privo di anse in lamina di rame, svariate monete AV (oggi noti 229 es.), tutte leggibili, alcune delle quali in conservazione fior di conio.

Notate le zecche di Torino (Vittorio Amedeo III di Savoia, Carlo Felice di Savoia e Carlo Alberto di Savoia), Genova (dogi biennali), Milano (Giuseppe II d'Austria, Francesco II d'Austria), Venezia (Francesco II d'Austria), Parma (Ferdinando I di Borgone), Anversa, Bruxelles, Vienna, Parigi, La Rochelle, Popayan e Bogotà.

Le monete vennero recuperate in piccoli lotti da parte dell'Ispettore Onorario della Soprintendenza Archeologica per la Lombardia, Gianni Inzaghi, e dai Carabinieri presso coloro che ne erano venuti in possesso,

Verosimilmente il ripostiglio era integro al momento della scoperta ma non al momento del recupero. La consistenza iniziale è nota, oggi sono disponibili 229 esemplari.

Cons.: Milano, Civiche Raccolte Numismatiche, coll. Brera (inv. 736), tutti i 229 es. oggi noti.

Bibl.: ARSLAN 1981 (schedatura minimale).

Discovery of the find: fortuitous discovery, construction sites / road works; discovery in wooden / metal
Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(H) Sartirana Lomellina, novembre 1889 (dep.: c. 1415)

Nel novembre 1889 un muratore, nel praticare uno sterro in un cortile di una vecchia casa di proprietà parrocchiale, rinvenne a poca profondità la parte inferiore di un vaso di terra, ove nell'acqua giacevano circa 4 chilogrammi di monete in argento avvolte in pezze di tela e agglomerate in un solo corpo per effetto dell'ossidazione. Il nucleo venne rotto a colpi di martello, danneggiando una parte dei materiali. Una metà di quelle monete finì nel crogiolo. Il rimanente venne suddiviso in vari lotti, la maggior parte dei quali fu venduta a Milano.

La parte salvata al crogiolo si compone specialmente di monete di Gian Galeazzo Visconti, Giovanni Maria Visconti e – in misura minore – Filippo Maria Visconti. A seguito del numero ridotto di esemplari a nome di quest'ultimo duca, si può ipotizzare che le monete furono occultate durante il suo principato.

Composizione (sommatoria):

- Zecca di Avignone, Urbano V (1362-70): 1 grosso;
- Zecca di Bologna, Giovanni e Giacomo Pepoli (1317-50): 1 bolognino;
- Zecca di Casale Monferrato o Chivasso, Teodoro II Paleologo (1381-1418): 2 c.d. mezzo grosso (tipo Promis 1858 n. 4), 3 c.d. quarti di grosso (tipo Promis 1858 n. 7);
- Zecca di Como, Franchino Rusca (1408-12): 1 trillina;
- Zecca di Genova, doge Barnaba Guano (1415): 4 grossetti; doge Tommaso Fregoso (1415-21): c. 150 grossetti;
- Zecca di Milano, Barnabò Visconti (1351-85): 1 sesino; Gian Galeazzo Visconti (1385-1402): c. 100 pegioni, 3 soldi, c. 100 sesini, c. 50 denari; Giovanni Maria Visconti (1402-12): parecchie centinaia di grossi, 5 soldi (tipo Gneccchi n. 3), 3 soldi (tipo Gneccchi n. 6); Estore Visconti (1412): 11 grossi, 1 sesino; Giancarlo Visconti (1412): 2 grossi;

- Giancarlo ed Estore Visconti (1412): 5 grossi; Filippo Maria Visconti (1412-47): 2 grossi (tipo Gneccchi n. 13), 2 grossi (tipo Gneccchi n. 27); 4 grossi;
- Zecca di Piacenza: Giovanni da Vignate (1410-13): 5 grossi;
 - Savoia, Amedeo VI (1343-83): 1 bianco (tipo Promis n. 3);
 - Zecca di Verona, Gian Galeazzo Visconti (1387-1402): 3 grossi, 5 sesini.

Le denominazioni proposte per le monete sono da rivedere sulla base delle ricerche più recenti.

Nature of the site at the time of concealment or loss: *lake, river, water source, water well, aqueduct*

(SF) Piuro, ex Palazzo Bavele, giardino, paulo ante 17 novembre 2023 (dep.: 4 settembre 1618)

Nel corso di scavi condotti dall'Università di Verona a Piuro, sono rinvenuti i muri perimetrali di una parte del giardino di Palazzo Bavele a continuazione verso ovest del borgo di Piuro partendo da Palazzo Vertemate di Belfort. Dopo un'approfondita indagine e rilevamento delle aree grazie anche al servizio dell'Associazione SOS Metal detector Nazionale sono comparse una serie di monete del XVI secolo in argento e alcuni elementi di carattere commerciale (bolle).

Le monete appartengono a zecche dell'area padano-lombarda e veneta (notata, in particolare, la zecca di Venezia), alcune provenienti dalle aree dei Grigioni.

Tutti questi ritrovamenti sono stati registrati nelle terre di scavo sul giardino in quanto il crollo dell'edificio è riconducibile alla frana che dal Monte Conto ha travolto Piuro in direzione nord-est il 4 settembre 1618.

Discovery of the find: *discovery during archaeological investigations; discovery with metal detector*

Nature of the site at the time of concealment or loss: *urban settlement (oppidum, colony, town)*

(SF) Piuro, loc. Mot del Castel, scavi 2017-21 (dep.: IV-XV sec.)

Nell'arco delle tre campagne di scavo succedutesi presso la collinetta detta "Mot al Castel" a partire dal 2017, tra i vari reperti rinvenuti ci sono state anche 10 monete, delle quali 4 trovate nel 2017, 3 nel 2019 e 3 nel 2021 (ancora inedite), relative a un arco temporale di coniazione compreso tra IV e XV secolo.

L'ampliamento dello scavo fatto nel 2019 ha portato al ritrovamento di alcune nuove strutture murarie, alcune delle quali, probabilmente, riconducibili ad un edificio di epoca bassomedievale. Dagli strati associati a questi muri provengono le tre monete rinvenute nel 2019.

Dettagli:

- zecca di Milano (5 es.):

- 1 denaro di Ugo e Lotario II, conservato solo a metà (da scavo 2019);
- 2 denari terzoli a nome di *henricvs*;
- 1 soldo di Gian Galeazzo Visconti, proveniente da un'area di scavo che pare essere stata sostanzialmente sfruttata come zona aperta, cortiliva o prativa;
- 1 es. non determinato;

- zecca di Pavia (2 es.):

- 2 denari mezzani databili alla prima metà del XIII secolo (da scavo 2019).

Mentre i due denari pavesi paiono contemporanei quanto meno alla prima fase della struttura bassomedievale, il denaro di Ugo e Lotario è interpretabile come materiale residuale. Probabilmente è stato trovato in giacitura secondaria, quindi in strati più recenti, perché riportato insieme alla terra, in cui era originariamente, durante la costruzione della nuova struttura, per l'edificazione della quale dovettero essere intercettate fasi più antiche.

(SF) Postalesio, chiesa di San Colombano, scavi 1999, 2011 (dep.: XI-XV sec.)

Da scavi, monete sporadiche di età tardo-medievale:

- denaro AR a nome di *henricvs imperator* (Enrico II o Enrico III di Franconia), zecca di Pavia (scavo 2011, US 205);
- denaro AR a nome di *henricvs imperator*, zecca di Milano (scavo 1999, US 139);
- denaro AR a nome di *henricvs imperator*, zecca di Milano (scavo 2011, US 234 n. 15);
- denaro MI, Filippo Maria Visconti (1412-1447), zecca di Milano (scavi 1999, US 125);
- gettone o tessera (?) in piombo di epoca postmoderna non classificabile (D/ nel campo, al centro, croce in doppio cordoncino; R/ grande fiore).

I tre denari di Pavia e Milano a nome di nome di *henricvs imperator* hanno un peso di 0,90-0,95 grammi e andrebbero quindi collocati a prima del 1162 circa.

Discovery of the find: discovery during archaeological investigations

(H) Sondrio, Palazzo di Giustizia (ex carceri), 13 luglio 1915 (dep.: post 1515)

La sera del 13 luglio 1915, nel corso delle operazioni di sopralzo e restauro del vecchio Pretorio e di demolizione delle vecchie carceri per la costruzione del nuovo Palazzo di Giustizia, rimuovendo le macerie prodotte dall'abbattimento del torrione che sorgeva a ovest del cortile del Pretorio stesso, due sterratori rinvennero 5 AV:

- ducato AV, Francesco I Sforza (1450-66), zecca di Milano;
- ducato AV, doge Francesco Foscari (1423-57), zecca di Venezia;
- ducato AV, doge Giovanni Mocenigo (1478-86), zecca di Venezia;
- scudo d'oro del sole AV, Carlo VIII di Francia (1483-98), zecca non determinabile;
- scudo d'oro del sole AV, Francesco I di Francia (1515-47), zecca non determinabile.

I materiali furono consegnati dai due sterratori – tali Luigi Gemo da Sossano (VI) e Carlo Salvi di Trescore Balneario ma residente in Montagna – ad Antonio Giussani, che provvide alla loro pubblicazione.

Il Giussani (1916, pp. 204-205) ipotizza – dichiarando però di non averne le prove – che le monete si trovassero in una fessura del rivestimento in legno che copriva le pareti del locale terreno della torre, nascostevi da qualche prigioniero nella seconda metà del XVI secolo.

Cons.: Ignoto. Il Giussani (1916, p. 208) dichiara di aver consegnato le monete alla Biblioteca Civica di Sondrio.

(D) Bodio Lomnago, nei pressi della stazione palafitticola di Bodio Centrale detta anche 'delle monete', n.s. (dep.: I sec. a.C. – I sec. d.C.)

La denominazione della stazione palafitticola di Bodio Centrale, a Bodio Lomnago, anche come 'delle monete' sarebbe da ricondurre a un ritrovamento di 300 monete romane dei secc. I a.C. – I d.C. avvenuto nei pressi.

In BRAMBILLA 1874, p. 43 si parla di *circa centotrenta monete dell'ultimo mezzo secolo della repubblica romana, che*

ivi, certo per caso, caddero. Quelle monete ricordano trentatré famiglie consolari, e fra esse, la più preziosa, è quella della famiglia Mescinia, quantunque molto logora; sei sono legionarie di Marcantonio; nove triumvirali del tempo di Pompeo, Cesare ed Augusto; e sei imperiali di Augusto; una è del re Juba; le altre non furono lette, perchè troppo logore.

Le monete potrebbero forse essere correlate a un'area sacra dedicata al culto delle acque.

Bibl.: BRAMBILLA 1874, p. 43 (parla di c. 130 monete) <http://www.ilvaresotto.it/Citta/BodioLomnago.htm> (URL visitato il 30/8/2019; parla di c. 300 monete, senza aggiungere alcun dettaglio).

(SF) Cairate, monastero di santa Maria Assunta, scavi 1981-2011 (dep.: n.s.)

Gli scavi eseguiti dalla Soprintendenza per i Beni Archeologici della Lombardia negli anni 1981-2011 nella zona ora occupata dal monastero di santa Maria Assunta di Cairate (Varese) hanno evidenziato l'esistenza di una villa rustica di I-IV secolo d.C. vicina ad una zona abitata, posta probabilmente in corrispondenza dell'attuale centro di Cairate. Il complesso agricolo-produttivo fu ristrutturato in età tardo antica, quando l'area del cortile in affaccio sull'Olona, delimitata dagli edifici della villa, fu trasformata in una necropoli, che si sviluppò nel corso del V e in parte del VI secolo d.C. Con l'occupazione longobarda si andò sviluppando un complesso monastico, poi ampliato in epoca romanica e profondamente ristrutturato nel Rinascimento.

Gli scavi hanno restituito un complesso di 31 monete.

Due monete di bronzo in pessimo stato di conservazione figurano tra i reperti del Periodo II, corrispondente all'epoca tardo antica (IV-VI secolo d.C.), quando si formò e si sviluppò il primo nucleo della necropoli. La documentazione numismatica è completamente assente nel periodo corrispondente all'età altomedievale (metà / fine VII-XI secolo d.C.), che vede l'impianto e l'uso del complesso monastico, e nel periodo d'età bassomedievale (XII-XIII secolo), caratterizzato da intensa attività edilizia con l'ampliamento della chiesa e l'organizzazione del nucleo interno del

monastero. Ricompare solo nella prima metà del XV secolo, per continuare con altri 28 pezzi (1 AR + 10 MI + 17 AE d'età medievale e moderna) fino alla prima metà del XX secolo.

Nell'insieme delle monete medievali e moderne, ventiquattro sono risultate attribuibili ad una autorità e ad una zecca precise. Due monete, probabili trilline oppure quattrini per il diametro e la forma del tondello, sono attribuibili alla zecca di Milano, perché conservano l'una parte della legenda [...]NI DVX (per *mediolani dvx*), l'altra una delle aquile dello stemma inquartato con l'aquila e la biscia di stile milanese, ma, in mancanza di elementi che consentano di identificare esattamente l'autorità emittente, la loro datazione può essere solo fissata tra il XV e il XVIII secolo. Tre monete di rame non sono classificabili e si possono solo assegnare approssimativamente all'età moderna. Il tondello coperto da broccato, non asportato in sede di restauro, non è identificabile con sicurezza come moneta; se tale, dovrebbe essere attribuita genericamente all'età moderna, posteriore al XVI secolo.

Nel sito è attestata la presenza sia di moneta locale che di moneta straniera, introdotta nell'area del monastero da elementi della comunità locale o da viandanti a scopo devozionale o per piccole transazioni legate alla vita materiale che doveva svolgersi attorno al complesso monastico. Tra le monete classificabili prevalgono nettamente quelle di zecche italiane: 15 sono di Milano (XV-XIX secolo: Filippo Maria Visconti, Filippo II d'Asburgo, Filippo III d'Asburgo, Filippo IV d'Asburgo, Carlo II d'Asburgo, Carlo III d'Asburgo, Francesco I d'Asburgo-Lorena), 1 di Desana (XVII secolo: Carlo Giuseppe Francesco Tizzone), 1 di Bozzolo (XVII secolo: Scipione Gonzaga) 1 di Torino (XVIII secolo: Vittorio Amedeo II di Savoia), 1 di Piacenza (XVIII secolo: Antonio Farnese); la più recente fra le quindici di Milano, del 1861, la moneta di Napoli, del 1862, e quella di Roma, del 1931, sono posteriori al conseguimento dell'unità nazionale. La moneta straniera è presente sin dalla seconda metà del XV secolo ed è documentata sino alla prima metà del XVIII. È costituita da monete di antichi stati situati all'interno dell'attuale territorio italiano (Bozzolo, Piacenza, Desana e Ducato di Savoia), di stati confinanti con esso (Basilea e Lucerna in Svizzera; Contea del Tirolo: Sigismondo?, zecca di Hall) e di una regione distante dall'Italia, come la Catalogna (Barcellona: Carlo III).

Cons.: Cairate, monastero di santa Maria Assunta.

(SF) **Cardano al Campo, via Carreggia, proprietà Galimberti**, novembre 1973 – 1975/6 (*dep.:* I-II sec. d.C.)

Tra i novembre 1973 e il 1975/6 alcuni lavori in via Carreggia, in un terreno adiacente a un'area già interessata da ritrovamenti archeologici nel 1959, vennero alla luce rombe e altri elementi riconducibile a una necropoli ancora in unso nel II secolo d.C.

- Nel novembre 1973, scavando nel sottosuolo con una pala meccanica per realizzare il seminterrato e le fondazioni dell'erigenda casa Galimberti, la benna riportava alla luce

materiale archeologico di diversa natura: olpi, piatti, vasi, monete, cesoie, coltelli e rasoi. I reperti, la maggior parte dei quali recuperati in frammenti o in precario stato di conservazione, costituivano il corredo funebre di alcune antiche sepolture andate distrutte dall'escavatore meccanico. Ignoto il numero e le caratteristiche delle monete rinvenute. Segnalate solamente:

- tomba 4, all'interno del cinerario : una moneta di Faustina Seniore (m. 141 d. C.);
 - tomba 7: moneta in bronzo di Nerva, molto ossidata e solo in parte leggibile, con al dritto la testa laureata dell'imperatore rivolta a destra e legenda IMP NERVA CAES AVG PM TRP COS III PP (97 d.C.);
 - in contesto non precisato, moneta in bronzo di Traiano, coniata durante il quarto consolato (101-102 d.C.);
- Il 28 agosto 1975, scavando ancora con una pala meccanica la trincea per gettare le fondamentazioni del muro di cinta della proprietà Galimberti-Tomasini, si portava alla luce a circa 60 cm sotto il piano di calpestio dell'adiacente stradina privata, una tomba a cremazione di epoca romana. Il proseguimento dei lavori, attentamente sorvegliati, e la bonifica archeologica, condotta a più riprese su buona parte della proprietà, consentirono il reperimento di altre 49 tombe di diversa morfologia e struttura. Solo il 21,5% delle tombe restituì monete, tutte in pessimo stato di conservazione e pressoché illeggibili.
- tomba 14: moneta di autorità incerta, ricondotta a una Faustina (forse la moglie di Antonino Pio);
 - tomba n.s., a inumazione del tipo a cassa di embrici (venuta alla luce il 21 dicembre 1975): follis di Licinio I (308-324 d.C.) della zecca di Treviri, insieme con un sottile braccialetto di bronzo decorato con un motivo "a filo ritorto" e oltre 200 minuti grani di una collana in pasta vitrea.

Bibl.: BRANDOLINI, DEIANA, PALAZZI n.s. (cita sommariamente alcune delle monete rinvenute).

(SiF) Caronno Pertusella, chiesa di santa Maria della Purificazione (detta 'La Nova'), n.s. (dep.: prima metà XV sec.)

Nello scavo archeologico condotto nella chiesa di santa Maria della Purificazione a Caronno Pertusella, sotto la navata, è stata rinvenuta la sepoltura di un bovino di circa 4 anni di età, senza segni di macellazione sulle ossa (presumibilmente giugulato), nella cui bocca era stato deposto un denaro imperiale piano a nome di *fredericvs imperator* della zecca di Milano (tipologia con trifogli e rosette, databile al 1298-1311; v. *MEC* 12, pp. 425-427).

L'animale risultava sepolto in una fossa orientata nord-sud, con gli arti ravvicinati e il cranio a nord, reclinato verso est (e

quindi verso l'altare), nella stessa posizione dei defunti venuti alla luce ad ovest della facciata.

Il fatto che il pavimento di prima fase del luogo di culto sigillasse completamente la deposizione e che non sia stata rinvenuta stratigrafia a separare le due azioni, indica che tra esse debba essere intercorso un breve periodo di tempo. La menzione di un rettore e di un cappellano della chiesa nella relazione di una visita pastorale del 1455 consente di datare la costruzione dell'edificio e la conseguente stesura del pavimento nell'ambito della prima metà del XV secolo. Il denaro, dunque, può essere qualificato come un reperto "antico" per l'epoca del suo utilizzo rituale, essendo stato coniato circa un secolo prima.

Lucia Travaini (2015) ha avanzato l'ipotesi che esso sia stato collocato nella bocca del bovino in quanto richiamo ad un'antica tradizione funeraria e, proprio per la sua natura di moneta non più in circolazione, considerata più appropriata per tale impiego.

Bibl.: RIDOLFI 2008-09, pp. 249-250 (prima notizia; non identifica la moneta, parla solo di denaro AR riferibile alle emissioni di Federico II (prima metà del XIII secolo)); CHIARAVALLE 2011a (non recepisce la letteratura più aggiornata, proponendo una datazione della moneta tra il 1185 e il 1240 c.); PERASSI, BONA 2017; LUSUARDI SIENA, DELLÙ, BONA, VALENTE 2019, p. 76 (cita).

(SF) Castelseprio, scavi 1958-2007 (*dep.*: n.s.)

La documentazione numismatica di Castelseprio è costituita da 28 monete rinvenute nel corso di scavi condotti dalla Soprintendenza per i beni archeologici della Lombardia tra il 1958 e il 2007 e da un ripostiglio di consistenza incerta e di escursione cronologica ignota, parzialmente segnalato in bibliografia agli inizi del Novecento (v. oltre). Le monete restituite dagli scavi sono:

- *Follis* di Massenzio per Aquileia del 307-309/10 d.C.;
- 8 minimi di V-VI secolo in pessimo stato di conservazione, con caratteri di contraffazione di moneta romana imperiale, forse di zecca irregolare (AE illeggibili tra gr. 0,32 e gr. 0,50);
- Tremisse AV proto-longobardo;
- Denaro ottoniano;
- Denaro forse pavese di XI-XII secolo;
- 3 denari terzoli per Milano (seconda metà del XII secolo);
- Grosso per Milano di Enrico VI di Svevia (prima metà del XIII);
- Obolo di Cremona con le stelle, posteriore all'accordo monetario del 1254;
- Denaro planeto per Bergamo a nome di Federico II (tipo databile 1282-1290);
- Denaro di Azzone Visconti signore di Como (1335-1339);
- Trillina di Francesco I re di Francia per Milano (1515-1522);
- 2 probabili trilline di fine XV-inizi XVI secolo;
- Kreutzer di Maria Teresa d'Asburgo (1740-1780) per Praga del 1762;
- 5/10 di Francesco Giuseppe I (1848-1916; 1848-1859 per il Lombardo-Veneto) per Milano del 1858;
- da 10 centesimi di Vittorio Emanuele II di Savoia re d'Italia (1861-1878) del 1862, di zecca indeterminabile;
- da 10 centesimi di Umberto I di Savoia (1878-1900) del 1893 per Roma;
- da 20 centesimi in nichelio di Vittorio Emanuele III di Savoia (1900-1946) del 1918;
- da 10 centesimi in bronzital di Vittorio Emanuele III di Savoia del 1940.

Segnalato anche peso monetario per *semissis* AV (gr. 1,92).

Il ripostiglio è quello segnalato in MAGNI 1904, il quale ne indicava con le seguenti parole circostanze, data, contesto di ritrovamento e contenuto: *Sul piazzale dell'antica chiesa appartenente al distrutto castello di Seprio, nello scavare il terreno...durante lo scorso novembre...trovarono una tomba in muratura coperta da rozze pietre, contenente tre scheletri; vicino ad uno di questi eravi un piccolo involto costituito da una ventina di monete, delle quali quattro pervennero in Museo a Como. Le monete arrivate a Como per l'esame sono di Gian Galeazzo Visconti conte di Virtù (1385-1402).* Probabilmente le monete furono portate a Como per la sola lettura, poiché attualmente non sono conservate al Museo Civico "Paolo Giovio" (come confermato dal conservatore, Isabella Nobile De Agostini).

Le aree che hanno restituito monete sono la torre esterna (scavi 1970, strato II), la zona presso la recinzione del *castrum*, il *castrum* (scavi 1978, tra la cisterna e la torre/campanile e un recupero in superficie nel 1998), l'abside di S. Giovanni Evangelista (scavi 2007) e l'area nei pressi della chiesa (scavo 13.09.1958), la costruzione rotonda di accesso alla Cisterna Grande (scavo 13.06.1958), l'edificio VI (scavo 1988), la tomba TX22 (22.06.1958, 6/80), S. Maria foris portas (scavi 1982 e 1985 CSM 85 VII; 6; 1001), la Cascina Monastero di Gornate Olona, Torba (scavo 1984, B, pozzetto) e la tomba n. 5 di Torba (scavo 1980, CT 1- 6/80).

Cons.: Il ripostiglio fu disperso, il denaro ottoniano e lo scodellato di XI-XII secolo non sono attualmente reperibili. Quasi tutte le monete dal momento del ritrovamento o del recupero sono state conservate, insieme agli altri reperti, presso la Soprintendenza per i beni archeologici della Lombardia, ad eccezione delle sei monete di età comunale per Milano, Bergamo e Cremona, già depositate nel Medagliere dei Musei Civici di Villa Mirabello a Varese con indicazione "da Castel Seprio" e con annotazione della data e del contesto di ritrovamento, e del tremisse, già in deposito presso le Civiche Raccolte Numismatiche di Milano.

Tutte sono esposte nelle sale dell'Antiquarium di Castelseprio dall'inaugurazione, avvenuta nel

2009.

Bibl.: MAGNI 1904 (per notizia del ritrovamento del ripostiglio); DABROWSKA, LECIEJEWICZ, TABACZYŃSKA, TABACZYŃSKI 1978-79; ARSLAN 1994, pp. 512-513; ARSLAN 2004i, n. 3610 (cita solo il tremisse di Giustiniano I e il peso monetario); CHIARAVALLE 2009c; CHIARAVALLE 2013 (per descrizione dettagliata e illustrazione dei materiali); PERASSI, BONA 2017 (cita diffusamente i materiali, esaminandone la contestualizzazione); ASOLATI 2021a (cita la presenza di moneta bronzea romana).

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: military settlement (camp, castrum, sighting tower)

(SF) Castelseprio, area del castrum, scavi luglio 2016 (*dep.:* secc. III-IV e XX)

Nel corso degli scavi condotti dall'Università Cattolica nell'area archeologica del *castrum*, tre monete da ritrovamento sporadico:

- dalla cd. *casa medievale*

- sesterzio di Massimino I detto il Trace, emesso tra il marzo 235 ed il gennaio 236 d.C. La moneta è venuta alla luce nell'attività di pulizia del fondo del saggio stratigrafico effettuato nel 1981 al centro della casa. Il livello da cui proviene ha restituito materiali di età longobarda (VI-VII secolo d.C.). Per BONA 2017 (p. 210) la loro associazione non depone per una funzione economica del nominale

- US 100

- AE 2 (ma di peso 6,11 gr.) con al rovescio il tipo della *reparatio rei pvblicae*, riferibile alla riforma attuata nel 378 d.C. al tempo della co-reggenza di Graziano, Valentiniano II e Teodosio I, databile tra il 378 e il 388 d.C.

- pulizia presso la chiesa di santa Maria *foris portas*

- 50 centesimi 1920 con bordatura rigata di Vittorio di Emanuele III di Savoia.

Bibl.: BONA 2017; ASOLATI 2021a (cita il sesterzio di Massimino il Trace).

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: military settlement (camp, castrum, sighting tower)

(SiF) Castelseprio, area del castrum, cd. "casa gota", scavi luglio 2019 (dep.: post 534/40)

Nel corso degli scavi condotti dall'Università Cattolica nell'area archeologica del *castrum*, in corrispondenza della cd. *casa gota*, è stato rinvenuto un quarto di siliqua ostrogoto del tipo con il busto di Giustiniano I al dritto (DNIVSTINIANVS) e il monogramma di Teodorico senza croce in alto al rovescio (tipo *MIB* 39; *MEC* 1, n. 138).

Attribuzione ad Amalasuntha (534-35) o eventualmente Vitige (ante 540), assegnata alla zecca di Ravenna al momento della presentazione (v. *MEC* 1, p. 37 per una discussione sulle possibili attribuzioni).

Il ritrovamento è avvenuto in uno strato di VI sec. all'interno del quale sono stati rinvenuti anche frammenti di ceramica sia semplice che invetriata, oltre a frammenti vitrei di uso abitualmente attestato a partire dal VI sec. in avanti. Uno dei frammenti di ceramica presentava stampigli che hanno orientato gli scopritori ad assegnargli – provvisoriamente – una natura "longobarda". Possibile quindi che la moneta fosse in uso in epoca più tarda rispetto alla sua scoperta, e dunque nella prima età longobarda?

Da comunicazione personale di A. Bona, si tratta dell'unica moneta rinvenuta nel corso della campagna scavi 2019 a Castelseprio.

Bibl.: Inedito. Materiale presentato in una conferenza a Castelseprio il 24/7/2019.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: military settlement (camp, castrum, sighting tower)

(H) Castiglione Olona, via Masolino da Panicale, 1958 (dep.: c. 1360)

Ripostiglio, invenuto fortuitamente nel 1958 in una proprietà privata situata in via Masolino da Panicale a Castiglione Olona, originariamente composto da 530 esemplari. Detratto il premio di 132 monete per i proprietari, se ne conservano oggi 398 presso il Civico Medagliere del Castello Sforzesco di Milano

Composizione (25 AV + 505 AR+MI, ma solo 19 AV e 369 AR+MI ad oggi catalogati):

- monete AV

- 2 fiorini, zecca di Firenze: 1 del 1° semestre 1313 (Totto di Tedaldo); 1 tra il 2° semestre 1348 e il 1367 (maestranza sconosciuta);
- 5 genovini, zecca di Genova, Simone Boccanegra (1339-44);
- 3 mezzi ambrosini, zecca di Milano, Luchino e Giovanni Visconti (1339-42);
- 8 ducati, zecca di Venezia: 1 di Giovanni Soranzo (1312-28), 1 di Bartolomeo Gradenigo (1339-42), 5 di Andrea Dandolo (1343-54), 1 di Giovanni Dolfen (1356-61);
- 1 fiorino, zecca di Avignone: autorità papale sconosciuta, tra il 1324 e il 1370;

- monete AR+MI

- 29 grossi e 2 denari, zecca di Como, Azzone Visconti (1335-39);
- 1 grosso, zecca di Cremona (tipo con sant'Imerio, c. 1300-30);
- 1 grosso popolino, zecca di Firenze (1° semestre 1312, maestranza sconosciuta);
- 7 grossi ambrosini minori, zecca di Milano (1298/9-1310);
- 2 grossi ambrosini minori e 15 grossi aquilini, zecca di Milano, Enrico VII di Lussemburgo (1310-13, come re 1310-12);

- 257 grossi, zecca di Milano, Azzone Visconti (1329-39);
- 32 grossi, zecca di Milano, Luchino e Giovanni Visconti;
- 4 grossi, zecca di Milano, Giovanni Visconti (1349-54);
- 6 grossi, zecca di Milano, Bernabò e Galeazzo Visconti (1354-78);
- 4 soldi, zecca di Milano, Azzone Visconti;
- 4 sesini, zecca di Milano: 2 di Giovanni Visconti, 2 di Bernabò e Galeazzo Visconti;
- 4 denari, zecca di Milano: 2 di Azzone Visconti, 2 di Giovanni Visconti;
- 3 grossi, zecca di Piacenza;
- 6 *gros tournois*, Filippo IV di Francia (1285-1314).

Dalla discussione dei materiali in CHIARAVALLE 2003 vengono formulate nuove teorie circa la data di emissione dei mezzi ambrosini di Milano e dei grossi di Como. In particolare, per i grossi comaschi della Repubblica Ambrosiana viene proposta l'attribuzione al periodo di Azzone Visconti (1335-39).

Cons.: Milano, Civiche Raccolte Numismatiche (398 es.), i restanti (132 es.) dispersi.

Bibl.: DELL'ACQUA 1960-61 (prima notizia); CHIARAVALLE 2003 (solo 19 AV + 369 AR+MI catalogate); MEC 12, p. 672 n. 9; PERASSI, BONA 2017.

Discovery of the find: fortuitous discovery, construction sites / road works

(SF) Cittiglio, chiesa di San Biagio, n.s. (*dep.:* n.s.)

Durante gli scavi presso la chiesa di san Biagio a Cittiglio, 20+ AR+AE. Tra questi, sei hanno una cronologia compresa tra la prima metà del XIII e gli inizi del XIV secolo:

- denaro mezzano a nome di Federico II della zecca di Como (MEC 12, n. 449 (*var.*));
- denaro mezzano della zecca di Novara per un imperatore anonimo (MEC 12, nn. 165-166);
- denaro imperiale di Milano a nome di *fredericvs imperator* (MEC 12, nn. 581-582);
- due ulteriori denari imperiali milanesi pertinenti alla fase di riforma monetaria attuata dall'imperatore Enrico VII di Lussemburgo (MEC 12, nn. 587-588);
- imperiale per un imperatore anonimo, zecca di Pavia (MEC 12, nn. 795-797 (*var.*)).

In <http://www.ilvaresotto.it/Citta/Cittiglio.htm> (URL visitato il 30/8/2019) si riporta: *L'abitato [di Cittiglio] è diviso in due nuclei: quello più antico, posto sulla collina alla destra della provinciale è detto di "San Biagio" dalla piccola chiesa ivi eretta in epoca longobarda o altomedievale e più rimaneggiata. Scavi archeologici hanno portato alla luce affreschi databili all'anno mille, monete romane (XI-XVI sec.) oltre a numerosi altri oggetti antichi e tombe sepolcrali. L'indicazione relativa al rinvenimento di monete è palesemente contraddittoria: si tratta forse delle stesse 12 monete AR+AE ritrovate nella navata della chiesa.*

Bibl.: MELLA PARIANI, LORENZI 2006 (parla di 12 AR+AE nella navata della chiesa); PERASSI, BONA 2017 (citando, p. 111, *poco più di venti esemplari messi in luce*, fornendo elenco di solo sei e segnalando i materiali come *attualmente in corso di studio e pubblicazione da parte di Ermanno Arslan*).

(H) Duno, loc. Curio, nei pressi della chiesa di san Martino in Culmine, post ottobre 1956 (1957?) (dep.: ante 1148 (per MEC 12, p. 675: probabilmente metà XIII sec.))

Verso la metà dell'ottobre 1956, mentre si compivano i lavori di assaggio per esaminare in quali condizioni si trovassero le fondazioni preesistenti della chiesa romanica di san Martino in Culmine a Duno (originariamente costruita nel 1200 c. ma distrutta nel novembre 1943 nel corso della Seconda Guerra Mondiale), propedeutici al restauro dell'edificio, sulla parte anteriore della chiesa, al lato sinistro del portale, si rinvennero quattro tombe sovrapposte l'una all'altra, a due a due, formate con lastre di beola accostate. Le dimensioni approssimative erano di 2 m di lunghezza per 60 cm di larghezza e si trovavano a una profondità variabile dai 50 ai 70 cm. Ciascuna conteneva uno scheletro incompleto. Sopra l'ultima, si rinvenne pure la mandibola di un bambino dell'età di 8 anni circa.

Non molto lontano dalle tombe venne rinvenuto, più tardi, un piccolo vano di cm 20 per 30 circa. limitato da lastre di beola accostate, contenente un centinaio di piccole monete tutte uguali tra loro. Scambiate in un primo tempo per bottoni di divise militari, vennero trascurate dagli scavatori e in parte disperse nel terreno.

L'esame dei materiali sopravvissuti effettuato in tempi più recenti ha accertato 56 AR, tutti denari enriciani scodellati della zecca di Milano (35 di stile rozzo, 21 di stile più raffinato) di buon peso (c. 0,9-1,1 grammi).

Per MATZKE, DIAZ TABERNERO 2004 sono da datare tra il 1109 e il 1148.

Cons.: In parte disperso. I 56 esemplari sopravvissuti a Milano, presso le Civiche Raccolte Numismatiche.

Bibl.: ANONIMO 1957a (prima notizia, solo due esemplari illustrati) CHIARAVALLE 1992; MATZKE, DIAZ TABERNERO 2004 (riesamina e illustra integralmente i 56 esemplari sopravvissuti proponendo una nuova datazione); MEC 12, p. 675 n. 19 (come *Duno Valcuvia; examined by authors*).

Discovery of the find: fortuitous discovery, construction sites / road works

Nature of the site at the time of concealment or loss: rural settlement (vicus, villa rustica, shelter,

(H) Gallarate, via della Pace, 1934 (dep.: 1190-1210 (?))

Ripostiglio rinvenuto nel 1934, durante lavori di consolidamento di una abitazione privata di proprietà di Annibale Bertotti in via della Pace a Gallarate, un vicolo localizzato all'interno del circuito murato del centro varesino, non distante dall'attuale chiesa parrocchiale. Le monete furono trovate *in un buco praticato in un muro vecchissimo [...] fatto di bocce di fiume e ciottoloni mal posati nella malta [...] non di buona qualità* ed erano avvolte *in un pezzo di tela antica*.

Il ripostiglio era originariamente costituito da circa 580 esemplari: metà vennero destinati al proprietario dell'area, i rimanenti depositati presso la Regia Sovrintendenza ai Monumenti e Scavi di Milano. In seguito, 276 esemplari furono assegnati in deposito temporaneo al Museo della Società Gallaratese per gli Studi Patri, dove 18 di essi sono tuttora esposti nel percorso di visita, mentre 14 pezzi furono trattiene dalla stessa Sovrintendenza. Si ignora completamente la

natura degli esemplari conferiti come premio di rinvenimento, così come di quelli rimasti a Milano, mentre le monete confluite nella disponibilità del Museo gallaratese erano – secondo l'identificazione proposta negli anni '30 del XX secolo – nella loro totalità denari scodellati e piani databili tra la seconda metà del XII e la prima metà del XIII secolo. Si può pertanto ritenere che la gran parte degli esemplari siano emissioni della zecca di Milano. Considerando il quantitativo di monete affidate al Museo di Gallarate e le informazioni edite, presso l'istituzione museale dovrebbero essere custoditi ulteriori 40 es. di cui non si possiede alcun dato.

Composizione;

- 149 denari terzoli scodellati a nome *henricvs imperator*, zecca di Milano, c. 1167-1230;
- 63 denari mezzani scodellati, zecca di Brescia 1190-1210;
- 13 denari scodellati e piani, zecca di Mantova, 1153-c. 1250;
- 6 denari inforziati, zecca di Cremona, c. 1180-c. 1230;
- 5 denari scodellati, zecca di Nosedo o di area comasca, Federico I imperatore, 1162-c. 1180;
- 40 esemplari non descritti;

La datazione più tarda e, allo stesso tempo, più puntuale è quella fornita dai denari bresciani (1190-1210): possibile periodo di chiusura del ripostiglio?

Da esame diretto degli esemplari si riscontra che le monete di Cremona hanno uno stile che li colloca a cavallo tra il XII e il XIII secolo. Se si prende come riferimento la forma della lettera A impiegata nelle legende, si osservano sia esemplari con una A aperta ma ben formata, di stile recente, sia esemplari con una A chiusa, ancora più evoluta della precedente. Nessun esemplare di stile arcaico (A aperta e semplificata, realizzata come / \), invece, è stato riconosciuto. Per una discussione in merito alle monete di Cremona in questo ripostiglio si veda: <http://www.lamoneta.it/topic/145759-per-parlare-un-po-di-cremona/?p=1668326> (ultima visita: 25/1/2016).

Cons.: Smembrato e forse in parte disperso (v. sopra). Una parte a Gallarate, presso il Museo della Società Gallaratese per gli Studi Patri. 14 monete dal 7 marzo 1935 risultano inserite nelle collezioni del Monetiere Civico del Castello Sforzesco di Milano (oggi Civiche Raccolte Archeologiche e Numismatiche).

Bibl.: BINAGHI, MOTTO 2001-02; RIZZONELLI 2014 (cita); PERASSI, BONA 2017 (elenco più dettagliato, con cronologia aggiornata); RIZZONELLI 2021, p. 290 (cita in riferimento al ritrovamento di Cisano Bergamasco – n. 6571 – dando in nota 37 una breve descrizione e parlando di una composizione originaria di c. 300 es.).

(SiF) Gornate Olona, fraz. Torba, scavi 2016 (*dep.:* n.s.)

L'unica moneta rinvenuta nel corso della stagione 2016 dello scavo di Torba è un “medio bronzo” imperiale (g 6,49; mm 24; h 6) riferibile all'età antonina, preferibilmente all'augusto Antonino Pio (area 2000, US 2144). Le condizioni di conservazione non sono buone, al punto che non è possibile avere la certezza se si tratti di un dupondio o di un asse. La moneta ha subito un'intensa usura che ha profondamente alterato la leggibilità dei tipi.

Bibl.: ASOLATI 2021a (ipotizzando che la moneta sia stata riusata in fasi cronologiche più recenti, tardoantiche o assai più probabilmente altomedievali).

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(H) Gornate Olona, fraz. Torba, chiesa di santa Maria, scavi 1904 (dep.: fine XIV – inizio XV sec.)

Nel corso di scavi condotti nel 1904 nel piazzale antistante la chiesa di santa Maria a Torba fu messa in luce una tomba in muratura contenente tre scheletri. Accanto ad uno di essi fu rinvenuto *un piccolo involto costituito da una ventina di monete* (MAGNI 1904, p. 140). Solo quattro di esse furono portate al Museo Giovio di Como per essere sottoposte a lettura, con il riconoscimento di quattro denari in mistura di Gian Galeazzo Visconti (1385-1402).

Ad oggi si ignora la localizzazione sia degli esemplari trasportati a Como, dato che nel museo non ve n'è traccia, sia di quelli rimasti a Torba. Non è dato nemmeno sapere a quale delle diverse serie attribuite a Gian Galeazzo possano essere associati i quattro denari di cui si possiede sommaria descrizione, e se risalgono al periodo in cui il Visconti era signore di Milano (1385-1395), o se siano già ducali (1395-1402). In ogni caso è possibile che anche la quindicina di monete non catalogate siano ascrivibili al medesimo periodo storico.

Cons.: Disperso, solo 4 es. portati Museo Archeologico "Paolo Giovio" di Como, dove però sono irrintracciabili.

Bibl.: MAGNI 1904, p. 140; POZZI 1993, pp. 37-38; PERASSI, BONA 2017, p. 123.

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(uns) Induno Olona, 1869 (dep.: n.s.)

In BRAMBILLA 1874, p. 136, si riporta che a Induno Olona, *in un campo di proprietà del sig. Carlo Comi, nel 1869 si scopersero degli avelli quadrati di sasso. In essi si rinvennero monete antiche d'oro e di rame, anelli pesanti, tenaglie, coltelli, urne acquarie, vasi lacrimarii, ampolle di varie dimensioni e forme. Quelle antichità furono visitate dal Prof. Biondelli.*

Si tratta quasi sicuramente monete di età romana.

V. anche il ritrovamento n. 9948 (notizia almeno in parte duplicata?).

Nature of the site at the time of concealment or loss: necropolis / cemetery

(uns) Ispra, sul pendio del monte del castello di san Cristoforo, n.s. (tra il 1963 c. e il 1973) (dep.: XII-XIII secolo)

Durante i lavori di coltivazione di un campo sul pendio del monte sopra il paese di Ispra, il colono sig. Tangari rinvenne sette monete argentee scodellate, tutte uguali tra loro, di età medievale.

Potrebbe trattarsi di denari terzoli di Milano o mezzani di zecche dell'area monetaria milanese databili quindi tra il XII e la fine del XIII secolo. Impossibile stabilire se si trattasse di un piccolo rispostiglio o piuttosto di ritrovamenti sporadici in serie.

In ARMOCIDA, INNOCENZI 1973 si riporta che il sig. Tangari coltivava il fondo in cui era avvenuto il ritrovamento da circa dieci anni. Pertanto la scoperta delle monete deve essere datata tra il 1963 c. e il 1973.

(D) Sumirago, chiesa di santa Maria, n.s. (ante 1992) (dep.: c. 1315)

Durante alcuni scavi archeologici condotti nel 1988 funzionali alle operazioni di restauro della chiesa di santa Maria a Sumirago, in una cavità scavata all'interno dell'altare cubico pertinente alla seconda fase della chiesa, 5 AR+MI, interpretabili come deposito di fondazione.

Composizione.

- 1 denaro imperiale MI, Enrico VII di Lussemburgo, zecca di Milano (*CNI* 5, p. 63 n. 29), 1311-12;
- 2 denari imperiali MI, zecca di Pavia (*CNI* 4, p. 497 n. 15), 1323 – c. 1330;
- 1 denaro imperiale MI, zecca di Piacenza (*CNI* 9, p. 560 n. 17), XIII sec. – 1313;
- 1 grosso da 10 imperiali AR, zecca di Piacenza (*CNI* 9, p. 560 n. 13), XIII sec. – 1313.

Il periodo di deposizione proposto in MARTINI 1992 tra il 1329 e il 1339 richiede di essere anticipato di 15-25 anni circa alla luce delle cronologie delle monete basate su una letteratura più aggiornata.

Bibl.: MARTINI 1992 (erronea identificazione dei denari imperiali di Pavia e Piacenza come mezzani, riferimenti bibliografici molto imprecisi); PERASSI, BONA 2017, pp. 124-125 (con cronologia più aggiornata dei materiali) SACCOCCI 2018 (cita); LUSUARDI SIENA, DELLÙ, BONA, VALENTE 2019, p. 76 (cita).

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(SF) Uboldo, nell'area agricola compresa fra la Cascina Girola e la Cascina Malpaga, fine XIX sec. – 1970 (dep.: III-V sec. d.C.)

Nell'area agricola compresa fra la Cascina Girola e la Cascina Malpaga in Uboldo, tra la fine del 1800 e il 1970 vennero ritrovati diversi reperti archeologici collocabili tra la Seconda Età del Ferro (VII secolo a.C.) e l'Età Tardo-Romana (III-V secolo d.C.): fibule, vasellame, monete, resti di tombe celtico-galliche e sarcofagi romani.

I materiali fanno supporre che nell'area compresa fra le due cascine e la vecchia fornace di Gerenzano esistesse una necropoli celtico-romana.

Cons.: Materiali sparsi tra le Civiche Raccolte Archeologiche di Milano e i Musei Civici di Villa Mirabello di Varese, ma esatta collocazione delle monete ignota.

(SF) Varese, fraz. Ligurno, fondo Collodera, 1872 (dep.: c. IV sec. d.C.)

A Ligurno (oggi frazione di Cantello), nel fondo Collodera, venne alla luce nel 1872 una necropoli di età romana. Dalla ricognizione emersero piccole monete in bronzo molto ossidate, ritenute del 400 d.C. circa, oltre ad altre monete di più grande diametro attribuite al II sec. d.C., forse a Marco Aurelio.

In proposito, in una lettera che il prof. Alessandro Brambilla scrisse intorno a tale necropoli al sig. Henzen, segretario dell'Istituto Prussiano di Roma (pubblicata nel "Bullettino di Corrispondenza Archeologica", 31 maggio 1872) si legge (BRAMBILLA 1874, p. 178): *Finalmente si rinvennero anche alcune monetuzze (nove): di queste sei sono piccolissime – più piccole di un nostro centesimo – ma così ossidate, che non è possibile anche con lenti vedere alcun segno. Soltanto da una sola si rileva il profilo di una faccia, ma anche questo si indeciso che è facile scambiare con qualunque altro profilo gli si metta a confronto. Le altre tre più grandi sono in condizioni non certo migliori.*

Altre monete non meglio definibili né come quantità né come tipo furono ritrovate poi anche in seguito, nel corso sempre dello stesso anno, in nuove tombe scoperte sempre nella stessa

necropoli (BRAMBILLA 1874, pp. 180-181).

Bibl.: BRAMBILLA 1874, pp. 173, 178, 180-181.

(H) Arcevia, fraz. Santo Stefano, 1918 (dep.: 47 a.C.)

Ripostiglio monetale rinvenuto a Santo Stefano di Arcevia costituito da 21 esemplari: 10 vittoriati, 10 denari ed 1 quinario. Dall’esame della documentazione conservata presso l’archivio della

Soprintendenza si apprende che il suo ritrovamento avvenne nel 1918 da un agricoltore, Santi Pagnani, nel corso del suo lavoro all'interno del podere di proprietà di tale Franceschini. In base a un denario del magistrato monetario Lucius Plautius Plancus, che risulta essere la moneta più recente del gruppo, è possibile stimare il possibile occultamento del ripostiglio al 47 a.C.

Cons.: Ancona, Museo Archeologico Nazionale delle Marche (inv. nn. 10761-10775, reg. monete nn. 712-725).

(oth) Tolentino, duomo, sarcofago dei santi Catervio, Settimia e Basso, n.s. (dep.: n.s.)

Tra le 1.874 monete e medaglie devozionali ritrovate nel sarcofago dei santi Catervio, Settimia e Basso nel duomo di Tolentino:

- 1 denaro provisino del Senaro Romano di II emissione;
- 1 picciolo di papa Giovanni XXII;
- 1 grano di Ferdinando II d'Aragona (1504-16), zecca di Messina;
- 2 baiocchetti AR e 364 quattrini MI, zecca di Castro;
- svariati quattrini MI, zecca di Urbino;
- quattrini MI, zecca di Lucca, secc. XVI-XVII.

Il gruppo delle monete di Castro, come consistenza numerica, è secondo soltanto a quello dei quattrini di Urbino, la cui zecca ebbe del resto vita ben più lunga di quella di Castro.

(H) Cantiano, loc. Le Vaie, n.s. (dep.: post 1334)

Ripostiglio di 113 monete proviene dalla località chiamata “Le Vaie” che potrebbe forse corrispondere al colle fortificato, denominato dalle vecchie fonti “Le Piaie”, dove nel 1393 erano stanziati le milizie del conte Antonio da Montefeltro durante l’assedio al castello. La maggior parte delle monete, pari a ca. il 92% (104 es.), è costituita da piccioli emessi da papa Giovanni XXII (1316-34), in una zecca identificata in *CNI* 13, p. 345 – anche se in forma dubitativa – con Macerata, ai quali si somma un picciolo del papa successivo, Benedetto XII (1334-41), emesso dallo stesso atelier.

Due monete devono essere considerate intrusive, collocandosi al di fuori dell’ambito cronologico del ripostiglio: si tratta di un quattrino di Perugia datato al 1374-76 e di un denaro di Gubbio del XV secolo.

Composizione:

- Bologna, Repubblica, bolognino grosso, 1236-1337, 1 es.;
- Ancona, Repubblica, denaro, XIV sec., 2 es.;
- Ascoli, Repubblica, picciolo, XIII-XIV sec., 2 es.;
- Macerata, Giovanni XXII, papa, picciolo, 1316-34, 104 es.;
- Macerata, Benedetto XII, papa, picciolo, 1334-41, 1 es.;
- Perugia, Repubblica, picciolo, ordinanza 1321, 1 es.;
- (intrusivo) Gubbio, Francesco Maria I della Rovere, duca, quattrino, 1508-16 e 1521-38, 1 es.;
- (intrusivo) Perugia, Repubblica, quattrino, 1374(?) -76, 1 es.

Cons.: Cantiano, Museo Archeologico e della Via Flaminia “Giulio Cesare Corsi”.

(SF) Cantiano, Rocca Gabrielli, n.s. (dep.: secc. XII-XVIII)

Dalla Rocca Gabrielli, antica rovina del castello di Cantiano, 32 AR+MI di natura sporadica, che coprono con continuità

un arco temporale che va dalla fine del XII sec. fino a poco dopo la metà del XVI sec., con due sole

eccezioni costituite da baiocchi databili tra il XVII e il XVIII emessi dalla zecca di Bologna.

Elenco dei materiali:

- Bologna, Repubblica, quattrino, 1376-1401, 1 es.;
- Bologna, autorità non determinata, quattrino, XVII-XVIII sec., 2 es.;
- Lucca, Castruccio degli Antelminelli detto Castracane, signore, castruccino, 1316-28, 1 es.;
- Pisa, Repubblica, picciolo, 1318-metà del XIV sec., 1 es. (segno pugnale);
- Firenze, Repubblica, picciolo, fine XIII-XIV sec., 2 es. (1 del 1323-1326, 1 del 1325-1400);
- Ancona, Repubblica, denaro, ante 1170-ante 1290, 1 es.;
- Ancona, Repubblica, denaro, XIV sec., 3 es.;
- Ancona, Repubblica, denaro, XV sec., 1 es.;
- Fermo, Governo autonomo, quattrino, XIV sec., 1 es.;
- Macerata, Giovanni XXII, papa, picciolo, 1316-34, 5 es.;
- Urbino, Guidobaldo II della Rovere, duca, quattrino, 1538-74, 1 es.;
- Gubbio, Guidobaldo I di Montefeltro, duca, picciolo, 1482-1508, 1 es.;
- Perugia, Repubblica, picciolo, ordinanza 1321, 5 es.;
- Perugia, Repubblica, quattrino, 1374(?) -76, 1 es.;
- Perugia, Repubblica, trino, ordinanze 1471 e 1483, realizzata tra il 1471-1503, 1 es.;
- Roma, Senato Romano, provisino, 1300-1404 ca., 1 es.;
- Roma, Sede vacante (cardinale Luigi Cornaro Camerlengo), quattrino, 1572, 1 es.;
- Messina, Federico il Semplice d'Aragona, re, denaro, 1355-77, 1 es.;
- autorità e zecca non determinata, 2 es.

(H) Cantiano, torre di san Nicolò, n.s. (ante inizio XIX sec.) (*dep.:* post 1590)

Ripostiglio, con 116 AR+MI, ritrovato nella torre di san Nicolò a Cantiano. La moneta più antica è un quattrino de l'Aquila (1435-1442), mentre il termine post quem per la chiusura di questo insieme di spiccioli è dato da due quattrini di Macerata di papa Gregorio XIV (1590-1591). L'87% delle monete si colloca nei tre decenni più recenti del periodo.

Composizione:

- monete di area italiana (113 es.)

- Frinco, emissioni anonime della famiglia Mazzetti, contraffazione di sesino bolognino, 1581-1601, 1 es.;
- Castiglione dello Stiviere, Ferrante I, marchese, quattrino, 1580-86, 1 es.;
- Castiglione delle Stiviere, Rodolfo Gonzaga II, marchese, quattrino ad imitazione di moneta bolognese, 1586-93, 8 es.;
- Castiglione delle Stiviere, Rodolfo Gonzaga II, marchese, quattrino ad imitazione di moneta papale anconetana, 1586-93, 8 es.;
- Cattaro, Repubblica di Venezia, Paolo Valaresso, Conte Rettore Provveditore, follaro, 1508-10, 1 es.;
- Cattaro, Repubblica di Venezia, Marcantonio Venier, Conte Rettore Provveditore, follaro, 1583-86, 1 es.;
- Correggio, emissioni anonime (conti Gilberto, Camillo e Fabrizio da Correggio), quattrino, 1569-97, 18 es.;
- Correggio, emissioni anonime (conti Gilberto, Camillo e Fabrizio da Correggio), quattrino al tipo di Massa Lunigiana, 1569-97, 1 es.;
- Mirandola, Gianfrancesco Pico, Signore, sesino, 1499-1533, 1 es.;
- Parma, Ottavio Farnese, duca II, quattrino, 1547-86, 1 es.;
- Bologna, Bentivoglio Conservatori, quattrino, 1490-1506, 1 es.;
- Bologna, emissioni anonime pontificie, quattrino, sec. XVI, 5 es.;

- Massa Lunigiana, Alberico I Cybo Malaspina, principe di Massa, quattrino, 1568-1623, 1 es.;
- Siena, Repubblica, quattrino (monete specificate in verbale d'emissione del 1511), 1 es.;
- Ancona, Gregorio XIII, papa, quattrino, 1572-85, 7 es.;
- Camerino, Repubblica, quattrino, prima metà XVI sec., 1 es.;
- Camerino, Giulia Varano, duchessa, picciolo, 1527-34, 1 es.;
- Camerino, Paolo III, papa, quattrino, 1539-49, 1 es.;
- Fano, Pio V, papa, quattrino, 1566-72, 1 es.;
- Fano, Gregorio XIII, papa, quattrino, 1572-85, 14 es.;
- Fano, Sisto V, papa, quattrino, 1585-90, 1 es.;
- Macerata, Paolo III, papa, quattrino, 1534-39, 1 es.;
- Macerata, Gregorio XIII, papa, quattrino, 1572-85, 2 es.;
- Macerata, Gregorio XIV, papa, quattrino, 1590-91, 2 es.;
- Montalto, Sisto V, papa, quattrino, 1585-90, 1 es.;
- Pesaro, Francesco Maria II della Rovere, duca, quattrino, 1574-1624, 1 es.;
- Urbino, Guidobaldo II della Rovere, duca, quattrino, 1538-74, 1 es.;
- Urbino, Francesco Maria II della Rovere, duca, quattrino, 1574-1624, 19 es.;
- Castro, Pierluigi Farnese, duca, quattrino, 1545-47, 3 es.;
- Roma, Paolo III, papa, quattrino, 1534-59, 2 es.;
- Roma, Gregorio XIII, papa, quattrino, 1572-85, 2 es.;
- Ancona o Roma, Pio V, papa, quattrino, 1566-72, 1 es.;
- L'Aquila, Renato d'Angiò, re, quattrino, 1435-42, 1 es.;
- zecca non determinata, Gregorio XIII, papa, quattrino, 1572-85, 1 es.;
- imitazione di un quattrino di Macerata, sede vacante, 1590, 1 es.;
- monete di area spagnola (1 es.)
 - Burgos, Ferdinando V e Isabella I, re, blanca, 1474-1516, 1 es.
- monete non identificabili (2 es.).

La torre di san Nicolò non è oggi più esistente, sulla cui base all'inizio del XIX secolo è stato costruito il campanile dell'omonima chiesa.

Cons.: Cantiano, Museo Archeologico e della Via Flaminia "Giulio Cesare Corsi".

(oth) Fano, cattedrale, tomba di san Fortunato, n.s. (dep.: n.s. (ma post 1113?))

Nella tomba di san Fortunato presso la cattedrale di Fano, segnalati denari della zecca di Verona a nome di Enrico databili al primo decennio del XII sec.

Per CIAMPOLTRINI, SACCOCCI 2019, p. 17, i denari veronesi sono stati con tutta probabilità depositati durante una ricognizione effettuata nel 113, l'unica di quel periodo ricordata dalle fonti.

Bibl.: CASTELLANI 1929; CIAMPOLTRINI, SACCOCCI 2019, pp. 16-17 (cita per il rinvenimento di esemplari veronesi simili anche a Lucca, piazza san Giusto; v. ritrovamento n. 10278).

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(H) San Costanzo, loc. Stacciola, n.s. (paulo ante 1916) (dep.: n.s. (sec. XIII?))

Ripostiglio, di c. 25.000 esemplari depositati all'interno di un grande recipiente di terracotta grezza e mal cotta, di cui si è riusciti a recuperare qualche frammento.

Per RICCI 1916, le monete *paiono grossi anconitani anteriori a quelli col S. Quiriacus del secolo XIII, ma finora è stato difficile assegnare loro un'epoca precisa. Sono di lega bassissima d'argento, con cui il rame è mescolato nelle proporzioni del 60%. Portano sul dritto al centro un A, entro un cerchio di puntini, oppure una specie di anello; intorno vi è la leggenda DE ANCONA in caratteri gotici; sul rovescio vi sono pure impressioni, ma non ancora decifrate.*

Cons.: Ancona, Museo Archeologico (tutti i pezzi rinvenuti? In RICCI 1916 si diceva che una parte del ripostiglio è stata intanto inviata alla Direzione del Gabinetto Numismatico di Brera, che sta studiando l'importante ritrovamento.

(H) Ferrazzano, loc. Colli, Colle San Martino, 4 settembre 2006 (dep.: post 118 a.C.)

Il 4 settembre 2006 vennero consegnati alla Soprintendenza per i Beni Archeologici del Molise 70 denari romano-repubblicani e un obolo di *Phistelia* provenienti, con ogni evidenza, dallo smembramento di un ripostiglio monetale operato sul terreno dall'aratro.

Nel verbale di consegna delle monete, redatto in quello stesso giorno, si apprende come i materiali fossero stati rinvenuti poche ore prima della consegna dal sig. Luigi Donato Lombardi Cerio, sparsi tra le zolle di un podere che proprio in quei giorni era stato sottoposto alle arature. Il podere si trova ubicato sul crinale del cosiddetto Colle San Martino, un modesto rilievo dominante da NE sulla contrada pertinente al territorio comunale di Ferrazzano e denominata Colli. Il fondo ricade a cavallo del confine che separa il settore nordorientale del tenimento del suddetto paese dalla porzione sudorientale del territorio comunale di Campobasso.

Cons.: Soprintendenza per i Beni Archeologici del Molise, depositi.

Isernia

(SF) Agnone, nei pressi della chiesa di sant'Onofrio, paulo ante 18 giugno 1914 (dep.: XIII-XIV sec.)

Nel corso degli scavi realizzati per la costruzione del primo tratto del 2° tronco della strada provinciale 70, nei pressi della chiesa di sant'Onofrio, furono rinvenute tre monete. Di queste, una

fu riconosciuta essere un denaro piccolo della zecca di Ascoli risalente al XIII-XIV secolo, mentre delle altre due non ci sono indicazioni.

Le monete furono inviate dal responsabile del cantiere, ingegner Vincenzo Scafati, a Vittorio Emanuele III di Savoia. il re trattenne il denaro di Ascoli, restituendo le altre due.

Cons.: La moneta di Ascoli idealmente nella ex collezione di Vittorio Emanuele III di Savoia, ora presso il Museo Nazionale Romano. Disperse, invece, le altre due.

(SF) San Vincenzo al Volturno, area del vicus romano, scavi 1997 (*dep.:* I-IV sec. d.C.)

Nel 1997 gli scavi a San Vincenzo al Volturno (trincea SS4, sull'altra sponda del fiume rispetto alla nota abbazia altomedievale) hanno portato alla luce un *vicus* repubblicano. Esso fu rimpiazzato da una villa rurale di età imperiale, a sua volta abbandonata nella seconda metà del IV secolo.

Le 70 monete rinvenute durante le ricerche hanno consentito la datazione delle fasi di vita dell'insediamento, documentando la crescita costante della locale comunità, con un picco di attestazioni raggiunto nella prima metà del IV secolo. L'insieme numismatico è così costituito: 3 assi di epoca tardo-repubblicana; 15 reperti databili dal I sec. alla metà del III (tutti assi, ad eccezione di un quadrante di età augustea, un denario di Antonino Pio e un sesterzio di Claudio); 11 monete della seconda metà del secolo, soprattutto antoniniani; nove frazioni di follis radiati, di epoca tetrarchica; 25 monete, soprattutto di Costantino, della prima metà del IV sec.; 2 reperti più tardi, rispettivamente di Valentiniano I e Graziano.

(SF) Frascaro, scavi 1998-2000 (dep.: V sec. d.C.)

Su un'area di rilevante estensione interessata dalla costruzione della variante al tracciato stradale

della S.S. 30 "Valle Bormida" esterno all'abitato di Borgoratto, rientrante nel territorio comunale di Frascaro, si sono condotte successive campagne di scavo negli anni 1998-2000. In precedenza alcune trincee esplorative avevano evidenziato due distinti settori ad alto rischio di ritrovamenti archeologici, con depositi riferibili ad epoca neolitica e alla media Età del Ferro. Successivamente si misero in luce complesse strutture in negativo di età protostorica e sei sepolture terragne, in profonde fosse che in parte avevano intercettato la stratificazione più antica, attribuibili con sicurezza, sulla base degli elementi di corredo, all'arco cronologico della presenza gota in Italia. L'esigenza di completare la bonifica in corrispondenza degli svincoli stradali ha determinato (1999-estate 2000) la prosecuzione dell'intervento, che ha evidenziato, oltre ad un'altra serie di tombe (per un totale di 17 inumati), un profondo pozzo in laterizi, individuato a circa 100 metri dall'area cimiteriale, contenente una ricca stratificazione omogenea, databile ai primi decenni del VI secolo.

Due inumati recavano una moneta, verosimilmente posta all'interno del fodero del coltello o in una piccola borsa di cuoio:

- tomba 3, US 280: AE3, Valentiniano I o Valentiniano II (364-378 d.C.) forse posizionata inizialmente nella tomba all'interno di una borsa che si è decomposta;
- tomba 11: $\frac{1}{4}$ *siliqua* ostrogota AR a nome di Anastasio (D/ busto; R/ monogramma di Teodorico; ARSLAN 1989, AR 22) direttamente sull'osso dell'anca dell'individuo adulto sepolto.

Bibl.: BARELLO, MICHELETTO, ZANDA 1999; [BROGIOLO 2003], p. 607; MICHELETTO 2003; ARSLAN 2004i, n. 4990 (cita solo la moneta ostrogota); BARELLO 2007, p. 160; MICHELETTO, GIOSTRA, BEDINI 2019 (cita i materiali monetari e a p. 367 illustra il R/ della moneta ostrogota).

Discovery of the find: *discovery during archaeological investigations*

Other characteristics of the materials: *pierced coins*

(SF) Mombello Monferrato, loc. Molino Nuovo di Gambarello, scavi 1997-99 (dep.: n.s.)

A partire dal 1994 si sono avviate indagini archeologiche nei terreni posti in località Molino Nuovo di Gambarello, di fronte alla cascina cd. "del Pievano", in seguito all'affioramento durante lavori di aratura di abbondante materiale archeologico di epoca tardo-romana e altomedievale, che testimoniava l'esistenza di un insediamento pluristratificato esteso su una vasta area oggi agricola.

Le campagne condotte a partire dal 1997 hanno confermato che la prima fase di insediamento, se si eccettuano presenze sporadiche di materiali pre- e proto-storici rinvenuti in giacitura secondaria, è costituita da un edificio rustico tardo-romano, con fondazioni in laterizi e pavimentazioni interne ad acciottolato, posto ai margini di un modesto terrazzamento. Una rioccupazione dell'area, dopo il crollo delle murature, è indiziata dalla presenza di numerose buche di palo che si pongono a lato delle fondazioni dell'edificio più antico, recuperandone in gran parte la pianta, sia pure con l'utilizzo di materiali diversi. Al periodo di vita della nuova costruzione, databile verosimilmente nell'ambito del VI secolo, va riferito un poderoso livello scuro e fortemente organico, ricco di fauna, posto intenzionalmente a colmare il dislivello a ridosso del terrazzamento. A quest'ultimo si sovrapporrà nel VII secolo una costruzione in muratura a vano unico, con focolare, a cui vanno attribuiti abbondanti materiali recuperati in piccola parte dai livelli d'uso e dagli strati di distruzione, disturbati dalle arature moderne. Si tratta di ceramica longobarda decorata a stampiglia e a stralucido, pettini in osso, pietra ollare, una placchetta di cintura reggi-armi in ferro ageminato con almandine, insieme a una frazione di siliqua a nome di re Pertarito. A breve distanza si trovava una chiesa, con fasi costruttive databili tra il VII secolo e l'età romanica, con presenza di tombe rettangolari a cassa.

Dettaglio dei materiali monetari rinvenuti:

- antoniniano MI forato, Gallieno, 254 d.C., zecca di Roma;
- denaro merovingio suberato e forato, tra 670-675 e metà VIII sec.;
- tremisse AV Maurizio Tiberio I tipo;
- 1/8 siliqua AR monogramma Pertarito.

Bibl.: ARSLAN 1998, pp. 298-299 (per il tremisse AV); BARELLO, MICHELETTO, ZANDA 1999, (antoniniano e frazione di siliqua); [BROGIOLO 2003], p. 609; [BARELLO 2004b], pp. 153-159; ARSLAN 2004i, n. 5030; SETTIA 2007, p. 25; MICHELETTO 2007, pp. 43 (frazione di siliqua), 53 (moneta forata e denaro merovingio); BARELLO 2007, p. 160; BROGIOLO 2008, p. 12 (moneta longobarda); GIOSTRA 2014, p. 167 (cita il tremisse di Maurizio Tiberio).

(SF) Ponzzone, castello, n.s. (ante 2016) (dep.: post 1591-1622/8)

Nel corso di indagini archeologiche presso il castello di Ponzzone, dai livelli pavimentali di un edificio addossato alle mura antiche della prima cerchia (US 32), quattro monete databili tra il 1591 e il 1622/8, riconducibili secondo CROSETTO, COMBA 2016 ai lavori di trasformazione dell'antico castello in piazzaforte militare avvenuti per l'appunto tra il tardo Cinquecento e soprattutto il primo Seicento:

- grossetto 1622 o 1627 o 1628, Carlo Emanuele I di Savoia (1580-1630), zecca incerta (*CNI* 1, p. 293 n. 390 (1622), p. 298 n. 429 (1627), p. 299 nn. 444-445 (1628));
- quarto 1591, Vincenzo I Gonzaga (1587-1612), zecca di Casale Monferrato (*CNI* 2, p. 161 n. 24);
- quattrino 1603, Filippo III di Spagna (1598-1621), zecca di Milano (*CNI* 5, p. 298 n. 20);
- cavallotto 1611, Carlo Emanuele I di Savoia (1580-1630), zecca incerta (*CNI* 1, p. 282 nn. 306-307).

Il cavallotto di Carlo Emanuele I di Savoia fu ritrovato sotto una delle lastre pavimentali.

Nature of the site at the time of concealment or loss: castle / fortress

(uns) Ponzzone, dal territorio, XIX secolo (ante 1822) (dep.: n.s.)

In CROSETTO, COMBA 2016, p. 84 si menzionano notizie imprecise di ritrovamenti di "monete"

dal territorio di Ponzone nel corso del XIX secolo. Si cita inoltre il manoscritto *Cenni storici su di Ponzone* dell'avv. Pietro Giuseppe Cervetti, terminato nel 1822, in cui sono alcuni reperti che allora erano di proprietà dell'avvocato, dove è proposto il disegno sommario di tre monete. Di queste, solo una identificabile con certezza (sesterzio di Claudio, 50-54 d.C., zecca di Roma, *RIC* 1 rev., p. 128 n. 102), mentre le altre due rimanderebbero a una moneta di Nerva e a una di Commodo.

Bibl.: CROSETTO, COMBA 2016, p. 84.

(SF) Serravalle Scrivia, lungo la piana dove sorgeva l'antica città di Libarna, n.s. (c. 1820-25)
(*dep.:* n.s.)

Notizia del ritrovamento di monete in occasione dei lavori della Regia Strada dei Giovi, il cui tracciato attraversava con un percorso rettilineo la piana su cui sorgeva l'antica città di *Libarna*.

- In una lettera informativa che il R. Vice Intendente di Novi, l'avv. Francesco Lencisa, inviò il 19 ottobre 1820 a S.E. il Ministro di Stato, Primo Segretario degli Interni, il conte Balbo, si segnalava ritrovamento dei primi oggetti (*dei pezzi di marmo e delle medaglie antiche*) e di alcune consistenti murature (*recentemente siasi persino scoperta una specie di Anfiteatro*). Il 30 ottobre 1820, il cav. Luca Podestà, Ispettore genovese e direttore dei lavori di costruzione della "strada di Scrivia", sollecitato dai possibili rischi per l'andamento delle opere, inviò una relazione in cui affermava che nonostante la notevole opera di scavo, nulla era emerso nei pressi del sito dove pensava vi fossero i resti dell'anfiteatro, *restringendosi gli oggetti scavati, dopo quelli dei quali le ho da molto tempo reso conto, a due tronchi di colonna e ad alcuni pezzi di cornici marmoree che faccio copiare*. gggiunse poi a dimostrazione della sua buona volontà che avrebbe portato a Torino le monete raccolte nel corso degli ultimi anni.
- Il 5 agosto 1824, in una dettagliata lettera il canonico Giuseppe Bottazzi comunicò al conte Roget de Cholex la scoperta di una tomba a camera avvenuta nei pressi di Libarna: *Eccellenza, nell'aprire la nuova strada da Tortona a Serravalle si sono scoperti diversi sepolcri de' gentili Romani. Fra tutte le scoperte merita attenzione un sepolcro trovatosi sul principio di Luglio, che visitai ancora intatto trasportandomi subito sul luogo per impedire la dispersione degli antichi monumenti [...] Entro il sepolcro ci si trovò un olla cineraria anche di grandiosa larghezza, affatto vota, e vicino all'olla vedevasi un picciolo mucchio composto di un tritume di carbone e di ossa umane abbruciate. Nelle parti laterali dell'olla ritrovai gli strumenti sacerdotali della libazione, cioè il Simpulo ridotto a minutissimi pezzi e ne raccolsi alcuni frammenti. Ritrovai pure la Patera ridotta a pezzi i quali si possono ancora riunire. Scoprii in fine dopo varie indagini la moneta o medaglia ivi esistente: ma è talmente corrosa da ambi le parti, che non posso comprendere a qual epoca rimonti e senza dubbio si può credere anteriore agli Antonini giacché a quest'epoca si tralasciò l'uso di abbruciare i cadaveri.*

In *CIL* V2 7437 si cita anche la presenza in un sepolcro non lontano dall'anfiteatro di un cadavere che aveva una moneta in bocca: si tratta della stessa moneta nella lettera del 1824?

Bibl.: CROSETTO 2006, pp. 204-205, 210-211.

(SF) Serravalle Scrivia, lungo la piana dove sorgeva l'antica città di Libarna, area del teatro,
scavi aprile-giugno 1827 (*dep.:* n.s.)

Tra il 18 aprile e il 9 giugno 1827 fu condotta la prima campagna di scavi per portare in luce i resti del teatro romano. Subito dopo la conclusione dei lavori venne redatto in bella copia il *Registro degli oggetti rinvenuti negli Scavi dell'antico Teatro di Libarna*, finito il 23 giugno 1827. Esso contiene un elenco di tutti i reperti scavati e ritenuti sufficientemente significativi, diviso in otto

capitoli: *Pezzi di cornici in marmo bianco senza ornati; Pezzi di marmo bianco con ornati; Oggetti diversi in marmo bianco; Marmi lisci di diverso colore; Diversi pezzi di intonaco; Pezzi di diversi vasi in terra cotta; Monete diverse; Serramenti.*

Gli elenchi furono inviati il 23 luglio a Roget de Cholex. Nella lettera di accompagnamento ci si chiedeva anche se gli scavi fossero da continuare e se i materiali dovessero essere consegnati al R. Museo. Non possediamo la risposta, ma indirettamente sappiamo pochi giorni dopo (27 luglio 1827) dell'accoglimento della seconda istanza da Pietro Barucchi, Direttore del R. Museo di Antichità, il quale ringrazia per l'invio dell'elenco completo e indica i gruppi di oggetti che dovranno essere consegnati al Museo; si tratta dei reperti contrassegnati con i numeri 121 (*testa di putto*), 122 (*altra piccola testa di uomo coronata di allori*), 136 (*14 pezzi di vasi e coppe in terracotta rossa verniciata di rosso, con varj ornati e figure di uomini, animali, sattiri*), 139 (*una coppa di terra con vernice scura mancante di un manico*), 143 (*pezzo di vaso con un'iscrizione*), 151 (*piccolo mascherone di terra*), 154-156 (*monete*). Quello che fu richiesto arrivò – come conferma lo scambio di lettere del 28-30 luglio 1827 e l'annotazione sul Registro del Museo nell'agosto 1827 – e con questo si concluse il primo sensazionale periodo di scoperta della città.

(H) Serravalle Scrivia, sito archeologico di Libarna, n.s. (ante 23 dicembre 1865) (dep.: post 27 a.C. (?))

Il 23 dicembre 1865, nella seduta della Sezione Archeologica della Società Ligure di Storia Patria, Cornelio Desimoni informava la Società del ritrovamento nel territorio di *Libarna* di un tesoretto monetale, conservato all'interno di un vaso in ceramica, costituito da 52 monete d'argento di epoca romana, 35 delle quali recuperate da don Gianfrancesco Capurro di Novi Ligure.

Le monete sono databili principalmente tra II e I secolo a.C., l'ultima delle quali è attribuibile ad Augusto.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(H) Tortona, corso Repubblica, 2003 (*dep.*: post 364 d.C.)

A Tortona, in corso Repubblica, durante i lavori per la realizzazione del sottopasso ferroviario realizzati nel 2003, venne ritrovato un piccolo gruzzolo di 23 AE (follis, AE3/4) tutti di età romana tardo-imperiale all'interno di una tomba, tra l'omero destro e la cassa toracica del defunto.

Notati esemplari di Costantino I, Costante cesare, Costanzo II, Valente e Valentiniano, con le zecche di Costantinopoli, Roma, Aquileia ed Arles rappresentate. Molti esemplari non classificabili a causa del cattivo stato di conservazione.

(SF) Tortona, tra corso Repubblica e via Saccaggi, area dell'alveo del porto fluviale romano, n.s.
(dep.: III-V sec. d.C.)

Nonostante una fase di parziale degrado tra III e IV secolo, i materiali contenuti negli strati depositati in alveo portano a una conferma del mantenimento dei traffici commerciali nel corso del IV-VII secolo, senza soluzione di continuità. Si riscontra infatti la presenza di anfore tardoantiche (tipi Almagro 50, Almagro 51A-B, Almagro 51C, Spatheion 1, Africana 1), così come diverse monete cadute fortuitamente nel bacino.

Negli strati riferibili alla tarda antichità, si sono individuate le seguenti monete:

- sesterzio di Aquilia Severa, 218-222 (RIC 4.2, p. 59);
- denario di Severo Alessandro, 223 (RIC 4.2, p. 72, n. 19);
- dupondio di Gordiano III, 241-243 (RIC 4.3, p. 48, n. 300);
- sesterzio di Gallieno imperatore, 257-258 (RIC 5.1, p. 84);
- antoniniano di Gallieno imperatore, zecca di Roma, 257-259 (RIC 5.1, p. 146, n. 172);
- antoniniano di Gallieno imperatore, zecca di Roma, 260-268 (RIC 5.1, p. 146, n. 181);
- asse di Claudio II il Gotico, 268-270 (RIC 5.1, p. 214, nn. 34-35);
- antoniniano di Claudio II il Gotico, serie commemorativa, 270 (RIC 5.1, p. 233);
- antoniniano di Claudio II il Gotico, 268-270 (RIC 5.1, p. 223, n. 149);
- antoniniano di Claudio II il Gotico, zecca di Roma, 268-270 (RIC 5.1, p. 216, n. 67);
- antoniniano di Claudio II il Gotico, zecca di Milano, 268-270 (RIC 5.1, p. 223, n. 117);
- antoniniano di Tetrico II, 273-274 (RIC 5.1, p. 424);
- antoniano di Diocleziano, zecca di Ticinum, 292 (RIC 5.2, p. 243, n. 229);
- follis di Diocleziano imperatore, zecca di Roma, 294-305 (RIC 6, p. 359, n. 76a);
- AE4 di Costantino I, zecca di Arles, 317 (RIC 7, p. 247, n. 129);
- AE4 di Costantino I, zecca di Roma, 333-335 (RIC 7, p. 339, n. 351);
- AE4 di Costantino I, zecca di Aquileia, 336-337 (RIC 7, p. 410, n. 140);
- AE3 di Costantino II, Costanzo II e Costante augusti, zecca di Arles (?), 337-340 (RIC 8, p. 205, n. 20);
- AE3/4 di Costantino II, Costanzo II e Costante augusti, zecca di Costantinopoli, 337-340 (RIC 8, p. 450, n. 43);
- AE4 di Costantino II, Costanzo II e Costante augusti, zecca di Treviri, 340 (RIC 8, p. 145, n. 111);
- AE3 di Costanzo II e Costante augusti, zecca di Roma, 348-350 (RIC 8, p. 259, n. 153);
- AE3 di Magnenzio e Decenzio, zecca di Roma, 351-352 (RIC 8, p. 267, n. 209);
- AE3 di Valente, Graziano e Valentiniano II, 375-378 (RIC 9, p. 46, n. 22);
- AE4 di Onorio, zecca di Aquileia (?), 395-402 (RIC 10, p. 322);
- AE3/4 di Valentiniano III, 425-435 (RIC 10, p. 379, n. 2144);
- AE3 di Zenone secondo regno, zecca di Costantinopoli (?), 476-491 (RIC 10, p. 312, n. 947).

In CROSETTO 2020, p. 38, si citano monete in tomba dalla necropoli vinia al porto fluviale, non elencate in CROSETTO 2018:

- tomba 21: moneta di Faustina Augusta (138-140 d.C.);
- tomba 25: moneta di Nerone (54-68 d.C.);
- tomba 47: moneta della dinastia flavia, autorità non determinabile con precisione (69-96 d.C.);
- tomba 50: moneta di *Faustina Minor Augusta* (147-175 d.C.).

Bibl.: CROSETTO n.d. (cita indicando la distribuzione delle monete nelle diverse US, illustrando però solo il dupondio di Gordiano III, l'antoniniano di Claudio II Gotico e l'AE3 di Magnenzio e Decenzio); CROSETTO 2018, pp. 179-180 (elenco più dettagliato dei materiali, senza illustrazioni); CROSETTO 2020, p. 38 (per le monete dalla necropoli).

Discovery of the find: fortuitous discovery, agricultural work / gardening

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(SF) Castello di Annone, all'altezza del km 66 della S.R. 10, 1987 – ottobre 2001 (*dep.*: n.s. (post 257 d.C.))

A Castello di Annone, all'altezza del km 66 della S.R. 10, nei campi posti ad una quota inferiore rispetto all'attuale rilevato stradale a ovest del rilievo collinare, le raccolte di superficie di E. Musso e T. Bigaran (1987) e i sopralluoghi della Soprintendenza (Crosetto, marzo 1990; Camilli, ottobre 2000) hanno permesso il recupero di alcuni materiali frammentari: ceramiche a vernice nera e in terra sigillata, olle e olpai in ceramica comune, un elemento decorativo in bronzo con maschera dionisiaca e due monete.

La prima, di prima epoca imperiale, risulta scarsamente leggibile. La seconda è un antoniniano di Gallieno (257-259 d.C.), zecca di Roma, D/ GA[LLIENVVS A]VG, busto volto a destra con corona radiata, R/ ORI[ENS A]VG, sole in cammino verso sinistra con la mano destra sollevata e la sinistra che porta una frusta (RIC 5.1, p. 152, n. 249).

Tra il materiale compare anche una placchetta in bronzo (L. cons. 3,5 cm; l. mass. cons. 2,2 cm; s. lamina 0,2 cm) di forma triangolare con estremità ad espansione circolare, mancante della terminazione ad elemento forato, di cui rimangono solo gli attacchi delle due estremità.

(H) San Damiano d'Asti, 1889-90 (dep.: 310 d.C.)

Durante gli scavi per impiantare un nuovo vigneto, un contadino con il suo piccone ruppe un'anfora contenente circa 40-50 kg di piccole monete bronzee argentate (antoniniani). La maggior parte furono disperse e trafugate. Don Vitaliano Sossi, preposto della Cattedrale di Asti e appassionato raccoglitore di monete romane, riuscì a recuperarne più di 300.

Le più antiche erano di Gallieno (253-268 d.C.), le più recenti di Massimiano Ercole (287-310 d.C.). Abbondano quelle di Aureliano (270-275 d.C.), Probo (276-282 d.C.) e di Diocleziano (284-305 d.C.). Meno numerose quelle di Claudio Gotico (268-270 d.C.), Tacito (275-276 d.C.), Florianio (276 d.C.), Caro (282-283 d.C.), Numeriano (283-284 d.C.), Carino (283-285 d.C.) e Massimiano Ercole (287-310 d.C.). Alcune di Severina (moglie di Aureliano, 270-275 d.C.) ed uno di Magnia Urbica (moglie di Carino, 283-285 d.C.).

Notate:

- per Claudio Gotico: D/ busto radiato e corazzato di Claudio con la scritta: IMP. C. CLAVDIVS AVG; R/ la Clemenza di fronte, rivolta a sinistra, con le gambe incrociate, appoggiata con la

sinistra a una colonna tiene nella destra uno scettro, con legenda: CLEMENTIA TEMP;
- per Tacito: D/ busto radiato e paludato di Tacito con la scritta: IMP. C. M. CL. TACITVS AVG;
R/ VIRTVS AVG. con un soldato a destra, che tiene con la destra un'asta obliqua e nella sinistra un globo, con in esergo XXIT.

Cons.: Disperso, 300 monete vennero acquistate dal Don Vitaliano Sossi di Asti. Collezione successivamente venduta in asta G. Sangiorgi (Roma, 28 maggio 1894).

(H) Biella, loc. Piazzo, Palazzo La Marmora, n.s. (dep.: anni '30 o '40 del XVI secolo, o posteriore)

Ripostiglio con 60 MI, ritrovato chiuso in una borsa di stoffa o cuoio ai piedi della torre ottagonale di Palazzo La Marmora, costruita alla fine del XV secolo.

Consiste principalmente di monete piemontesi emesse nella seconda metà del XV e nella prima metà del XVI secolo. Notate: 40 parpagliole di Carlo II di Savoia, zecca di Torino; mezzi bianchi (?) di Carlo V d'Asburgo; soldini dei marchesi di Saluzzo, zecca di Carmagnola; grosso di zecca tedesca a nome di Federico II di Slesia; 3 monete francesi.

Nel pannello espositivo si propone un interrimento dei materiali nel terzo quarto del XVI secolo. Tuttavia, da una ricognizione preliminare dei materiali, il *terminus post quem* potrebbe anche essere anticipato agli anni '30 o '40 del XVI secolo, dal momento che i materiali presenti appaiono coerenti col circolante atteso per quel periodo sulla base delle attestazioni documentarie. Mancano inoltre esemplari sabaudi e milanesi ascrivibili al terzo quarto del XVI secolo: assenza difficilmente spiegabile, considerando le aree monetarie rappresentate nel ripostiglio, ipotizzando un *terminus post quem* posteriore al 1550 circa.

Cons.: Biella, Museo del Territorio Biellese (esposizione sommaria, con evidenti errori nella classificazione degli esemplari).

Bibl.: Inedito (visto presso il Museo del Territorio Biellese il 30/9/2012).

(uns) Alba e dintorni (incl. Rodello), 1825-27 (dep.: I sec. d.C.)

Nel fondo manoscritti della Biblioteca Comunale di Asti è presente *Catalogo di antiche monete esistenti presso di me avv.to De Canis* realizzato dall'avvocato astigiano Giovanni Secondo Gironimo De Canis (1770-1830). Il catalogo comprende 54 monete, di cui 29 di età romana, della collezione dell'avvocato provenienti da ritrovamenti avvenuti ad Alba e nelle aree limitrofe negli anni 1825, 1826 e 1827.

La descrizione dei materiali è spesso sommaria, ma per le monete di età medievale e moderna si possono riconoscere esemplari dei duchi di Savoia (Carlo I di Savoia, Francesco Giacinto con Carlo Emanuele II di Savoia e Vittorio Amedeo II di Savoia), delle zecche di Milano (età spagnola), Casale Monferrato, Mantova, Genova, Lucca, oltre che di Francia.

Non ci sono dettagli precisi sulle località di ritrovamento. In corrispondenza di alcune monete romane rinvenute nel 1827 si parla espressamente di Alba, e in un caso di Rodello.

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(SF) Alba, chiesa di San Lorenzo (duomo), scavi 2007-11 (dep.: n.s.)

Da scavi nella chiesa di San Lorenzo realizzati tra il 2007 e il 2011, in unità stratigrafiche variabili dal I secolo a.C. al XVI secolo circa, 52 monete di età romana, medievale e moderna. 19 esemplari da 16 sepolture, più un gruppo di 8 esemplari dall'ossario US 938.

- US 18+124: tornese piccolo AR, Filippo d'Acaia (1301-1334), zecca di Torino; tagliata in due metà;
- US 109: obolo MI, zecca di Asti, c. 1160-1270;
- US 154: obolo MI, zecca di Savona, c. 1350-1396;
- US 201: medaglia MI, zecca di Genova, 1139-1339 (ma datazione da rivedere);
- US 228: denaro imperiale piccolo (?) MI, zecca di Alessandria;
- US 258: sesino MI, Gian Galeazzo Visconti (1395-1402), zecca di Milano;
- US 417: dupondio AE, imperatore antonino non identificabile, c. 161-193 d.C.;
- US 425: AE4 illeggibile, IV sec. d.C.?
- US 549: denaro imperiale piccolo (?) MI, zecca di Alessandria; minuto MI, doge non identificabile, zecca di Genova, c. 1443-1462;
- US 630: obolo bianco (?) MI, Giovanni I Paleololo marchese di Monferrato (1338-1372), zecca di Chivasso;
- US 779; asse AE, Vespasiano o Tino, 69-71 d.C.;
- US 938 (ossario): denaro MI, Alfonso o Giovanni d'Aragona, zecca di Messina, c. 1416-1479; terlina MI, Luigi XII di Francia, c. 1498-1508, zecca di Asti; liard MI, Francesco I di Francia, zecca di Torino, c. 1538-1542?; 2 mezzi grossi MI, Carlo Emanuele

- I di Savoia, zecca incerta, c. 1587-1610; 2 monete medievali non identificabili; gettone (?);
- US 950: sesterzio AE, Sabina, 124-138 d.C.;
- US 1045: AE3, Costanzo II, zecca non identificabile, 355-361 d.C.;
- US 1060: AE4, imperatore non identificabile, c. 383-395 d.C.;
- US 1109: AE4, imperatore non identificabile, IV-V sec. d.C.?
- US 1116: AE4, imperatore non identificabile, IV-V sec. d.C.?
- US 1117: 2 AE4, imperatore non identificabile, fine V-VI sec.?
- US 1147: AE4, Teodosio, zecca non identificabile, 383-395 d.C.;
- US 1157: mezzo viennese (?) MI, Carlo II di Savoia, zecca di Torino o Vercelli, 1519-1545; altra moneta MI sabauda, non identificabile;
- US 1358: *folles* AE, Costanzo II Cesare, zecca di Treviri, 330-333 d.C.; AE3, Valente, zecca di Roma (?), 364-375 d.C.;
- US 1406: *folles* AE, imperatore non identificabile, 313-317 d.C.;
- t. 10: quattrino MI, zecca di Siena, 1351-1390;
- t. 59: moneta medievale MI ritagliata non identificabile;
- t. 67: obolo MI, zecca di Asti, XV sec.;
- t. 80: *pentanoummon* AE, Giustino II (565-578), zecca di Ravenna o Sicilia;
- t. 99: doppio denaro AR, Roberto d'Anjou conte di Provenza (1309-1343);
- t. 103: mezzo viennese (?) MI, Carlo II di Savoia, 1519-1545;
- t. 130: moneta MI non identificabile, XIV-XV sec.;
- t. 177: obolo MI, zecca di Savona, 1350-1396;
- t. 202: obolo MI, zecca di Savona, 1350-1396; obolo MI, zecca di Asti, XV sec.;
- t. 221: quarto MI, Carlo II di Savoia, zecca di Torino o Vercelli, 1536;
- t. 222: obolo MI, zecca di Savona, 1350-1396;
- t. 224: terlina MI, Luigi XII di Francia (1498-1515), zecca di Asti; moneta MI non identificabile, re di Francia non identificabile del XV-XVI sec.;
- t. 233: obolo MI, zecca di Savona, 1350-1396;
- t. 237: AE3, Valentiniano III, zecca di Tessalonica, 384-388 d.C.; frammento di moneta AE non identificabile;
- t. 242: minuto MI, doge Giano di Campofregoso (?), zecca di Genova, 1447 (?);
- t. 261: AE3 non identificabile, IV sec. d.C.

Classificazioni e cronologie da BARELLO 2013a, ma spesso imprecise, necessarie di revisione. Per ODDONE 2022 (p. 16), la moneta data come di Asti è un falso d'epoca del tardo periodo comunale (1300-39).

Cons.: Alba, Museo Diocesano. Alcune di queste monete esposte nei sotteranei della chiesa di San Lorenzo, viste il 14/12/2014.

Bibl.: BARELLO 2013a (con datazioni imprecise); ODDONE 2022, n. 1 (cita per la presenza di moneta di Asti); ODDONE 2023, n. 4.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: necropolis / cemetery

(uns) Alba, loc. Castelnuovo, villa La Torre, proprietà Marchsio, n.s. (*dep.:* n.s.)

Ritrovamento di monete in argento e bronzo di età romana, unitamente ad alcune monete d'epoca moderna.

I materiali numismatici sono emersi in associazione con una palla di cannone in ferro, un anello in rame con castone, frammenti ceramici graffiti d'epoca medievale.

Per FRESIA 1991, le strutture identificate al momento del ritrovamento sarebbero da riferire a un *castrum novum* già segnalato nel catasto d'Alba del 1560 e nella cartografia settecentesca e napoleonica, forse risalente alla seconda metà del XIII sec.

Bibl.: FRESIA 1991, pp 12-13; BARELLO 1997, p. 44 n. 9; ODDONE 2023, n. 13.

Nature of the site at the time of concealment or loss: necropolis / cemetery

(SF) Bra, fraz. Pollenzo, proprietà Monchiero, 1998 (?) (dep.: I sec. d.C.)

Un'indagine archeologica condotta a partire dal 1998, ha individuato un complesso di strutture particolarmente interessante anche se con funzioni non ancora ben chiare e di difficile interpretazione, sia per la presenza di più fasi costruttive, con muri conservati al solo livello degli ultimi filari di fondazione ed ampiamente intaccati dai numerosi lavori agricoli che interessato la zona, sia per l'impossibilità di esplorare il complesso in tutta la sua estensione.

L'orientamento delle strutture è nord/est-sud/ovest; la fase più antica è caratterizzata da un edificio centrale articolato in più vani, di cui solo uno (m 8 x 8 circa) è ancora leggibile a livello planimetrico, con muri perimetrali larghi ca m 0,90 e tecnica costruttiva in ciottoli legati da malta. Esplorato per m 25 circa sul lato orientale e per m 11 su quello settentrionale, era circondato, già probabilmente in questa fase che rinvenimenti monetali e ceramici datano agli ultimi decenni del I secolo a.C., da un ambulacro della larghezza di m 4,20 circa e da ambienti a carattere residenziale.

(H) Scarnafigi, dalle campagne di Cascina Millone, n.s. (ante agosto 1987) (*dep.*: inizio IV sec. d.C.)

Ripostiglio di folles di età costantiniana, localizzabile lungo la strada che collega la Cascina Millone con la Cascina Mittera, nei tenimenti dell'Ordine Mauriziano. L'epoca del rinvenimento, avvenuto a opera dei braccianti Rivarossa e Berra, impegnati nell'espianto di alcune piante di gelso, potrebbe collocarsi intono agli anni '40 o '50 del XX secolo.

Sulla base delle notizie raccolte dagli eredi della famiglia Cravero, fittavoli per conto dell'Ordine Mauriziano dell'area dove furono rinvenute le monete, si può ipotizzare che il ripostiglio fosse originariamente costituito da almeno 2.500 monete (10-12 chilogrammi di metallo).

Per BARELLO, CAMPO, ROCCHIETTI 2016, p. 62 si tratterebbe di un ripostiglio diverso da quello rinvenuto tra Scarnafigi e Villanova Solaro (n. 9195).

Cons.: Quanto oggi sopravvissuto è costituito da due nuclei diversi: 197 monete acquisite dalla Soprintendenza Archeologica del Piemonte e 52 monete conservate presso il Municipio di Scarnafigi, dove pervennero nell'agosto 1987 grazie al conte Bernardino Morelli di Popolo.

Novara

(H) Barengo, 1868 (dep.: post 1448)

Ritrovamento, alla profondità di un metro, di un ripostiglio di monete all'interno di una borsetta di tela. Al momento del rinvenimento le monete erano raggruppate tra loro e ossidate, al punto che non era possibile procedere a una loro identificazione.

Dopo un'operazione di pulizia con acidi operata da G.F. Gamurrini, è risultato trattarsi in prevalenza di monete del XV secolo:

- zecca di Mantova
 - 20 denari MI, Giovanni Francesco Gonzaga (1407-44), D/ arma dei Gonzaga; R/ volto di Virgilio visto di fronte;
 - 18 denari MI, Ludovico II Gonzaga (1444-78), D/ arma dei Gonzaga; R/ volto di Virgilio visto di fronte;
 - 2 denari MI, autorità non determinabile, D/ arma dei Gonzaga; R/ volto di Virgilio visto di fronte;
- zecca di Genova
 - 22 denari MI a nome di *CONRADVS*, epoca non determinabile;
- zecca di Asti
 - 5 denari MI, Carlo d'Orléans (1444-1465), D/ stemma; R/ AST nel campo in lettere gotiche;
- zecca di Foligno
 - 1 es. MI, papa Nicolò V (1447-65), D/ chiavi incrociate; R/ croce nel campo;
- zecca di Pavia
 - 2 es. MI, Francesco Sforza (1448-50), D/ croce nel campo; R/ volto di san Siro;
 - 1 es. MI, Francesco Sforza (1448-50), D/ arma degli Sforza; R/ lettere FS sormontate da corona;

Discovery of the find: fortuitous discovery, unknow circumstances; discovery in fabric / leather purse

(H) Biandrate, loc. Picarello, 1926 (dep.: n.s.)

Tesoretto di monete scoperto in occasione di lavori agricoli in un terreno privato, a un centinaio di metri dal paese. Le monete erano deposte a scarsa profondità nel terreno, senza alcuna protezione.

Composizione:

- 96 dramme padane AR coniate da popolazioni galliche locali, rispettivamente Insubri, Boi-Cenomani, forse *Libui*. Tra quelle conservate sono presenti i tipi con testa di Diana e leone "naturalistici" vicini al prototipo massaliota (2 esemplari: Pautasso 2; ARSLAN 1990, tipo VI), con testa di Diana e leone-scorpione (3 esemplari: Pautasso 3; ARSLAN 1990, tipi VII-VIII), con testa di Diana e leone-lupo (7 esemplari: Pautasso 7A; ARSLAN 1990, tipi XVI-XVII);
- 2 romano-repubblicani AR anonimi (4,10 e 4,40 gr), con al D/ una testa di Minerva, un ramoscello d'alloro e il segno X, al R/ i Dioscuri.

Cons.: Smembrato. Un parte a Torino, presso il Museo di Vercelli. I pezzi restanti presso una collezione privata di Vercelli (così nel 2003 secondo SPAGNOLO GARZOLI, GAMBARI 2004, p. 193).

(SF) Briga Novarese, loc. Regione Crocetta, 1953 (dep.: I sec. a.C.)

Nel 1953, durante lo sterro per le fondamenta della casa del sig. Crevola, posta sul lato destro della strata che scende da Borgomanero (quasi di fronte all'inizio di quella che porta a San Tommaso), venne alla luce un sepolcreto di cremati.

Le tombe, mescolate a terriccio nero quale segno evidente del rogo, erano protette alcune da lastroni di pietra, altre da pietrisco, altre ancora, a pozzetto nella nuda terra, da embrici o lastre di pietra. Furono recuperati gli oggetti dei corredi, in parte consegnati al Museo di Novara, in parte lasciati sul posto, presso il parroco e il proprietario del terreno, in seguito andati perduti.

Presso il Museo oggi si conservano un'olpe e un'urnetta in ceramica comune con tracce di invetriatura, e tre monete di bronzo di Cesare Augusto databili al 12 a.C.

Presso il parroco, e poi andati perduti, rimasero un'olla cineraria di grandi dimensioni, alcuni vasi (patere, scodelle, tazze, olpe, ecc.) in ceramica comune sia grezza che depurata, fusaiole e frammenti di ferro, tra cui una cuspidi di lancia.

Da osservazioni fatte sul luogo il Fumagalli deducava che il terreno adiacente doveva conservare altre tombe analoghe.

Cons.: Novara, Civiche Raccolte (le tre monete).

Bibl.: FUMAGALLI 1953, pp. 221-222; CASSANI 1962, p. 46 n. 8; SPAGNOLO GARZOLI, GAMBARI 2004, p. 213.

Discovery of the find: fortuitous discovery, unknow circumstances

(H) Cureggio, loc. Cascina Chiosa o Chiesa, nei pressi della stazione ferroviaria, 1921 (dep.: metà III sec. d.C.)

In occasione di lavori agricoli, il signor Giovanni Duelli rinvenne nel 1921 un'urna fittile, subito infrantasi, contenente circa 1.008 monete in bronzo, quasi tutte consegnate alla Soprintendenza, eccetto poche che andarono disperse all'atto del ritrovamento. Il proprietario ne ricevette in seguito la metà dalla Sprintendenza come premio di rinvenimento.

Nella maggior parte erano medi bronzi, talmente logori da non essere leggibili facilmente. Pochi i piccoli bronzi.

Si sono riconosciute alcune monete di Tito, Vespasiano, Traiano e Adriano, particolarmente consunte. Più numerose e meno logore le monete dei vari imperatori di II-III secolo (Antonino il Pio, Faustina, Marco Aurelio, Lucio Vero, Settimio Severo, Giulia Domna, ecc.). Nel complesso il nucleo maggiore era costituito da bronzi di II secolo con scarsi esemplari della prima età severiana.

Tesaurizzazione intorno alla metà del III secolo d.C.

Cons.: In parte disperso. Materiali certamente riconducibili a questo ripostiglio sono a Torino presso il Museo di Antichità.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: urban settlement (oppidum, colony, town); Other characteristics of the materials: fragmented coins / fragments

(H) Fara Novarese o dintorni, n.s. (ante 2 gennaio 1876) (dep.: n.s.)

Nel *Registro Doni* del Museo Civico di Novara, in data 2 gennaio 1876 al n. 157, compare l'ingresso di un anello d'oro di età romana insieme a 22 monete romane, donate da parte dell'avvocato Alessandro Prato Previde di Novara. L'anello viene indicato come *trovato a Fara Novarese in occasione dei lavori per la costruzione della strada nazionale ora provinciale*: indicazione di un ripostiglio da cui provenivano anche le monete?

Altri cinque denari risalenti allo stesso periodo (Adriano, Antonino Pio, Faustina I, Marco Aurelio, Settimio Severo) furono donati al Museo Civico di Novara il 12 giugno 1886 come rinvenuti *in un campo a monte dell'abitato di Fara Novarese* e potrebbero appartenere, dunque, al medesimo complesso, ma non si dispone di un minimo di descrizione che ne possa facilitare l'individuazione. Le cronologie sono comunque coerenti con il gruppo della donazione Prato.

Non è certo si tratti di un ripostiglio, ma BARELLO 2021 (pp. 182-183) è per questa idea, anche sulla base della cronologia ristretta delle monete donate e del fatto che sono presenti due coppie di monete uguali.

Cons.: Novara, Museo Civico (anello e le 22+5 monete).

Bibl.: BARELLO 2021, pp. 182-184.

(H) Mezzomerico, c. 1915-20 (*dep.:* n.s. (post 773/4?))

Nel corso di lavori agricoli, in un vaso di ceramica chiuso, ripostiglio con un numero imprecisato di tremissi AV longobardi (oltre 20?) e altre monete ancora, insieme con frammenti di tremissi AV.

Di questi, 19 tremissi furono acquistati dal Medagliere di Milano nel 1921. Solo 14 sono oggi riconoscibili con sicurezza:

- 1 Ratchis con monogramma;

- 2 Aistulf;
- 1 Desiderio con san Michele;
- 1 “stellato” Desiderio per *Mediolanum*;
- 3 “stellati” Desiderio per Novate;
- 2 “stellati” Desiderio per Pombia;
- 5 “stellati” Desiderio per *Sibrium*;
- 3 “stellati” Desiderio per *Ticinum*;
- 1 “stellato” Desiderio per Treviso.

Due altri tremissi (“stellati”?) sul mercato (*Monnaies byzantines*, asta R. Ratto 9, Lugano, dicembre 1930, lotti nn. 2384-2385, indicati come da Mezzomerico): Desiderio e Carlo Magno (?).

Per PARDI 2003, p. 27, potrebbe aver compreso anche monete di Carlomagno, quindi l’occultamento sarebbe posteriore al 774.

Se effettivamente i due tremissi citati in CUNIETTI-GONNET 1929 sono da Mezzomerico (v. sotto e la corrispondente scheda bibliografica), all’elenco precedente devono essere aggiunti un ulteriore esemplare della zecca di Pombia e uno della zecca di Ivrea.

Cons.: Milano, Civiche Raccolte Numismatiche (19 tremissi AV, di cui solo 14 riconoscibili); due tremissi dispersi sul mercato, altri non precisabili. I frammenti di tremissi furono dispersi tra i presenti al momento della scoperta (BERNAREGGI 1983a, pp. 103-104).

Bibl.: CUNIETTI-GONNET 1929 (non cita la provenienza dei materiali – tremisse di Pombia e tremisse di Ivrea, entrambi a nome di Desiderio – ma quasi sicuramente si tratta di Mezzomerico); BERNAREGGI 1960, p. 104; BERNAREGGI 1962; BERNAREGGI 1976, pp. 363-364; GARANCINI 1977, p. 93 (cita); ARSLAN 1978, pp. 20, 68-69; BERNAREGGI 1983a, pp. 103-104; ARSLAN 1994, p. 513; ARSLAN 1998, pp. 298-299; GIANAZZA 1998, p. 271 (cita i tremissi in asta Ratto); BANZI 1999, p. 117 (cita, ritenendolo erroneamente scoperto nel XVI secolo); PARDI 2003, p. 75 (possibile datazione *post* 774); DEMEGLIO 2003, p. 182 n. 68; ARSLAN 2004i, n. 5020; BONA 2021a (cita, dando come scoperta avvenuta nel 1921).

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(SF) Oleggio, fraz. Loreto, necropoli, n.s. (dep.: II-I sec. a.C.)

Nella necropoli di Oleggio, fraz. Loreto, segnalate monete in nove tombe, tendenzialmente uno o due assi di età repubblicana per sepoltura. In tre di queste tombe notate monete frazionate:

- tomba 38 (fine I sec. a.C.): asse illeggibile integro (17,19 grammi) e asse spezzato (11,76) ancora con traccia superficiale del taglio per facilitarne la rottura;
- tomba 248 (La Tène D1, 125-70 a.C.): asse sub-unciale ridotto di circa 1/3 rispetto alle dimensioni originali (12,97 grammi);
- tomba 257 (La Tène D1, 125-70 a.C.): asse sub-unciale ridotto di circa 1/3 rispetto alle dimensioni originali (11,71 grammi).

Segnalati anche frammenti del peso di un triente (pesi ricostruibili: 19,45 e 19,56 grammi).

La stessa necropoli aveva già restituito moneta in tomba:

- tomba 144: due sesterzi (BARELLO 2021, p. 185 nota 1; cita).

Per Barello i due assi ridotti di un terzo costituirebbero il *bes* da 8 once di cui parla Varrone (*LL V*, 172), mai prodotto nelle serie coniate.

Bibl.: Poster a cura di F. Barello presentato nell'ambito del convegno "Monete frazionate" tenutosi all'Università Cattolica di Milano il 16-17 settembre 2019 (illustra le tre monete frazionate). BARELLO 2021, p. 185 nota 1 (per le due monete dalla tomba 144).

Nature of the site at the time of concealment or loss: necropolis / cemetery

Other characteristics of the materials: fragmented coins / fragments

(H) Oleggio, loc. Cascina Fornace Beldi, 20 giugno 1958 (*dep.*: post 82 a.C.)

Il 20 giugno 1958, nel corso dell'estrazione di argilla per la fornace, la draga ruppe un'anfora contenente monete d'argento. Sono stati recuperati 538 denari AR romano-repubblicani, di cui 212 consolari. La metà è stata poi ceduta come premio di rinvenimento al proprietario, mentre un numero imprecisato è rimasto dentro la partita giornaliera di mattoni impastati.

Il *terminus post quem* è dato da una moneta dell'anno 82 a.C.

Cons.: Disperso.

Bibl.: CASSANI 1962, p. 192 n. 10; BALOSSO, GALLI 1975, p. 15; BARELLO 1999a, p. 376; SPAGNOLO GARZOLI, GAMBARI 2004, p. 432.

Discovery of the find: *fortuitous discovery, unknow circumstances*

Nature of the site at the time of concealment or loss: *burial, unknown context*

(H) Pombia, loc. Sant'Andrea, a ovest della fraz. Quara, marzo 1972 (dep.: fine III sec. d.C.)

Nel marzo 1972, nel corso di lavori edili per la costruzione di una recinzione, si rinvenne un tesoretto con monete in argento e bronzo argentato, contenuto in un vaso. Al momento del ritrovamento le monete andarono disperse e non è possibile stabilire con esattezza la consistenza originale. Attualmente i pezzi identificati sono 368 (secondo SPAGNOLO GARZOLI, GAMBARI 2004, p. 461, invece, solo 317 furono recuperate dai Carabinieri e consegnate alla Soprintendenza Archeologica), di cui 54 esposti oggi presso il Museo Archeologico di Arona. Riconosciuti antoniniani di Geta, Gallieno, Gordiano III, Treboniano Gallo, oltre a un denario di Caracalla.

Cons.: In parte disperso, 54 es. esposti presso il Museo Civico Archeologico "Khaled al-Asaad" di Arona.

Bibl.: SPAGNOLO GARZOLI, GAMBARI 2004, p. 461 (illustra quattro antoniniani). Aggiornamenti da visita al Museo Civico Archeologico "Khaled al-Asaad" di Arona del 28/5/2023.

Discovery of the find: *fortuitous discovery, construction sites / road works; discovery in clay container*

(H) Sizzano, loc. Tavoli o Noce di Camilla, paulo ante 1888 (dep.: c. 260 d.C.)

Ripostiglio, con AE+AR da Gordiano III a Gallieno.

La composizione non è nota nel dettaglio, dal momento che la notizia si limita a registrare *due recipienti pieni di monete romane del basso impero* [RUSCONI 1888]). Un recipiente conteneva monete *di rame* di Gallieno e Salonina, l'altro monete *parte di argento e parte di lega* da Gordiano III a Gallieno e Salonina.

Per BARELLO (2021, p. 182) sembrerebbe trattarsi di una selezione intenzionale, da parte del tesaurizzatore, di antoniniani con una significativa percentuale d'argento nella lega da una parte, e di quelli fortemente sviliti, emessi a partire dal 255 circa, dall'altra.

Cons.: Disperso. Sempre BARELLO (p. 185 nota 3) annota: *Non è chiaro se possano appartenere al medesimo ripostiglio tre monete romane di lega donate al Museo di Novara dal signor Luigi Spagnolini di Fara il 10 maggio 1886, due di Filippo e una di Claudio Gotico, rinvenute a Sizzano, annotate sul registro come «facenti parte della scoperta di una cassetta ed urna piena di monete romane» (Registro Doni, 13 luglio 1890, n. 723). La presenza di un antoniniano di Claudio II sposterebbe di poco in avanti la cronologia di interrimento.*

Bibl.: [RUSCONI 1888]; PY 1983, p. 122 n. 74 (cita con riferimento bibliografico "Callu, *La politique monétaire des empereurs romains de 238 à 311*, Paris, 1969); BARELLO 2021, p. 182.

(SF) Borgomasino (Borgo Masino), n.s. (dep.: n.s.)

Sicuramente identificate:

- moneta bizantina: *tremissis* AV Focas/Ravenna (per FERRERO 1893 *un'imitazione longobarda del triente di Foca imperatore bizantino*);
- moneta longobarda: *tremissis* AV longobardo Maurizio Tiberio, perduto (VON HESSEN 1974).

Segnalate inoltre una o due crocette in lamina d'oro e vasellame sia ceramico che in vetro e pietra ollare.

In TORASSO 1981, p. 75, si scrive però: *molte monete furono rinvenute nella necropoli di Borgomasino. Una ventina di esse, tutt'ora conservate, sono d'oro e appaiono ancora in buono stato.* Tra le monete segnalate dal Torasso sarebbero presenti anche metalli diversi dall'oro, per GIOSTRA 2014, p. 168 verosimilmente soprattutto bronzo e forse argento in minor misura.

Cons.: Ignota. Il tremisse longobardo sarebbe perduto, mentre i materiali segnalati in TORASSO 1981 non sono riconosciuti in altre pubblicazioni e dunque identificabili.

Bibl.: FERRERO 1893, p. 259 (*una moneta d'oro, imitazione barbara dei nummi imperiali del V o VI sec., si estrasse da una di queste tombe*); FERRERO 1894, p. 73; VON HESSEN 1974, p. 503; BERATTINO 1981, p. 88; TORASSO 1981; DEMEGLIO 2003, p. 175, nota 8; ARSLAN 2004i, n. 4890; GIOSTRA 2014, p. 167 (illustra una crocetta in lamina d'oro).

(H) Carignano, 16 agosto 1915 (*dep.:* c. 1360)

Ripostiglio nel vano di un muro a circa un metro di profondità, con numero imprecisato di monete in parte disperse dai muratori che stavano eseguendo i valori di sterro. Solo 64 AV recuperati, tra cui segnalati:

- monete di area italiana (24 es.)
 - Firenze, 22 fiorini dal 1252 al 1° semestre 1350;
 - Venezia, 2 ducati (1 Bartolomeo Gradenigo, 1339-42; 1 Andrea Dandolo, 1343-54);
- monete straniere (38 es.)
 - Aragona, 2 fiorini di Pietro IV (1336-1387);
 - Arles, 2 fiorini di Stefano de la Garde (1351-59);
 - Austria, 2 fiorini di Alberto II il Saggio (1330-58);
 - Boemia, 10 fiorini di Giovanni il Cieco (1310-46), zecca di Praga;
 - Delfinato (Viennois), 6 fiorini (2 Umberto II de la Tour, 1333-49; 4 Carlo V di Valois, 1349-64);

- Fiandra, 1 fiorino di Luigi I di Nevers (1322-46);
- Liegnitz-Brieg, 1 fiorino di Venceslao I (1342-64);
- Orange, 3 fiorini di Raimondo IV (1340-93);
- Rodi, 1 ducato di Deodato de Gozone (1346-53);
- Saint-Paul-Trois-Châteaux, 2 fiorini di Giovanni I Costi (1349-61);
- Ungheria, 6 fiorini (2 Carlo Roberto d'Angiò, 1309-42; 4 Luigi d'Angiò, 1342-82);
- Valkenburg, 1 fiorino di Renaud de Schonvorst (1354-55);
- Comtat Venaissin, 1 fiorino di Giovanni XXI (1316-34).

Cons.: Parzialmente disperso.

(SF) Monteu da Po, area archeologica di Industria, scavi 1961-2003 (*dep.:* n.s.)

Gli scavi condotti tra il 1961 e il 2003 hanno restituito un totale di 357 monete, tra cui 22 bronzi repubblicani/augustei.

La moneta repubblicana è costituita da 5 assi di standard onciale o sub-unciale. Altrettanti sono frazionati, con pesi che riflettono i medesimi standard: 13.48, 11.03, 10.96, 9.37 e 8.51 grammi.

(H) Pinerolo, settembre 1888 o 1889 (dep.: c. 1540)

Ripostiglio, con c. 500 AR+MI. Segnalate monete italiane di Savoia, Saluzzo (Carmagnola), Genova, Milano, Desana, Casale Monferrato, Trivulzio (Roveredo/Mesocco o Musso?), Urbino, Roma, Bologna, Venezia, Lucca, Masserano, Reggio Emilia, Ancona, Montanaro (abazia di San Benigno della Fruttuaria), oltre a straniere di Germania, Francia, Portogallo, Svizzera, Salisburgo, Navarra e Losanna.

Per ANONIMO 1889: *Nello scorso settembre [1888 o 1889] disfacendosi un vecchio pavimento casa di un tal Bottino in Pinerolo, si rinvenne un vaso contenente circa 500 monete di argento e di lega, di zecche italiane e straniere, dal 1490 al 1540. Fra queste, sebbene nessuna fosse rarissima, pure trovavansi buone monete di Asti, di Losanna e di Genova, acquistate dall'avv. Orazio Roggero di Saluzzo e dal cav. Foa di Torino, i quali comprarono la maggior parte del ripostiglio. Una porzione del ripostiglio medesimo fu acquistata dal sig. Deregibus di Pinerolo. Il ch. comm. Promis che ne vide alcune, ne scrisse nei seguenti termini: "Me ne furono fatte vedere alcune partite, ma non ho potuto ritenerle tanto da farne un catalogo anche sommario. Pochissime sono le rare; in massima parte sono comuni. La conservazione dei pezzi di argento per alcune è ottima, per la maggior parte è discreta, per pochissime è cattiva. Le monete in lega sono in generale di conservazione mediocre: poche sono quasi del tutto nuove. Nessuna fra queste è rara.*

"Accennerò in modo sommario le zecche delle quali ricordo aver visto monete nella partita che potei guardare: – Germania, zecche diverse, lega. – Francia, Luigi XII, id. – Portogallo, argento. – Svizzera, id. e biglione, varie. – Savoia, Carlo II, argento e biglione. – Genova, Luigi XII, arg.; A. Adorno, arg.; dogi biennali, arg. – Milano, Francesco II Sforza, arg. – Messerano, Fieschi, arg. – Saluzzo, Ludovico II, lega; M. Ant. arg. – Monferrato, arg. – Venezia, vari dogi, arg. – Desana, B. Tizzone, arg. – Trivulzio, biglione. – Casale, Carlo V, arg. – Reggio d'Emilia, arg. – Ancona, arg., papi. – Papi, Clemente VII, arg., Leone X, arg., Giulio II, lega. – S. Benigno, arg. – Lucca, repubblica, arg."

L'ispettore di Pinerolo ing. Garneri esaminò la partita acquistata dal Deregibus e la descrisse così:

A. Zecche Italiane. – 17 grossi di Carlo II di Savoia. – 2 cornabò della zecca di Saluzzo; uno del marchese Michele Antonio, l'altro del marchese Francesco. – 5 quarti di testone della zecca di Genova; uno battuto da Luigi XII di Francia; due di Francesco I di Francia: due dei Dogi. – 1 cavallotto di Bartolomeo Tizzone conte di Desana. – 8 monete della zecca di Casale; un cornabò del marchese Guglielmo; uno del marchese Bonifacio; sei quarti di testone battuti da Carlo V. – 1 semprevivo della zecca di Milano battuto di Francesco II duca. – 2 monete della zecca di Trivulzio: un doppio grosso e un grosso di Giovan Giacomo Trivulzio. – ??? cavallotto della zecca di Urbino battuto di Guidobaldo duca. – 1 doppio grosso della zecca di Roma battuto da Giulio II papa. – 1 doppio grosso della zecca di Bologna, battuto da Leone X papa. – 3 monete della zecca di Venezia battute dai dogi Antonio Grimani, Leonardo Loredano, e Giovanni Mocenigo. – Un grosso della zecca di Lucca, battuto da Carlo V.

B. Zecche straniere. – 1 moneta di Matteo vescovo di Salisburgo. – 1 moneta della città di Cork. – 2 monete della zecca di Navarra tosate. – 1 moneta di Losanna, battuta da Sebastiano vescovo: di quelle comuni senza valore. – 1 moneta della zecca di Baviera. – 1 id. id. della città di Augusta. – 1 id. della zecca di Borgogna. – 1. id. della zecca di Nordlingen. – 1 id. della zecca di Oettingen. – 5 monete che per essere tosate non si possono decifrare: sono di tipo germanico.

Finalmente una nuova partita del tesoretto medesimo, esaminata dallo stesso ispettore Garneri si componeva di questi pezzi:

A. Zecche italiane. – 7 grossi e cornabò di Bonifacio II march. di Monferrato. – 8 cavallotti di Carlo V di Monferrato. – 15 grossi e cornabò di Bartolomeo Tizzone conte di Desana. – 15 grossi e cavallotti di Carlo II di Savoia. – 1 cavallotto del marchese Francesco di Saluzzo. – 5 grossi di Francesco II Sforza, Carlo V, e G.G. Trivulzio p. Rogoredo. – 1 cornabò di P.L. Fieschi di Messerano. – 1 grosso di Genova di Francesco I re di Francia. – 2 grossi di Clemente VII. – 1 grossetto di Lucca, battuto da Carlo V. – 1 grossetto di Reggio di Emilia.

B. Zecche straniere. 6 monete di principi tedeschi.

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: ecclesiastical building (church, monastery, chapel,

(H) Susa, settembre 1812 (dep.: ultimo terzo del III sec. d.C.)

Ripostiglio rinvenuto nel settembre del 1812 durante la costruzione di un edificio sulla sponda sinistra della Dora, in area suburbana rispetto alla città antica, per iniziativa di Alexandre de Lameth, prefetto del Dipartimento del Po. Le 3.561 monete recuperate furono affidate per lo studio, grazie all'intervento del governatore, principe Camillo Borghese, all'Accademia delle Scienze di Torino e pubblicate da Giuseppe Vernazza di Freney. Nel luglio 1813 entrarono definitivamente nel Museo dell'Università di Torino.

Il sito del rinvenimento non è facilmente identificabile, ma per BARELLO 2018 (p. 137) potrebbe trattarsi del luogo, all'incrocio tra la 'contrada Imperiale' (corso Inghilterra) e 'via Lameth' (via Mazzini), dove sorse il caseggiato fatto costruire a fini commerciali dal biellese Eusebio Rosazza, impresario della strada del Moncenisio (1803-1811), divenuto successivamente la caserma

Umberto I.

Bibl.: VERNAZZA DI FRENEY 1812; ROSA 1889; BARELLO 2018, pp. 135, 137 (riporta le circostanze del ritrovamento e formula un'ipotesi sul luogo del ritrovamento).

Discovery of the find: discovery during archaeological investigations

Nature of the site at the time of concealment or loss: urban settlement (oppidum, colony, town);

(H) Torino, piazza San Giovanni, complesso dei Canonici di san Salvatore, scavi 1996 (*dep.:* primavera 1536 (?))

Nel corso di uno scavo archeologico condotto in piazza san Giovanni a Torino nel 1996 sono stati recuperati due contenitori di monete, seppelliti con le imboccature accostate in una cantina del complesso dei Canonici di san Salvatore.

Il vaso cilindrico conteneva 1.037 AR, soprattutto testoni, disposte in pile su otto strati. Le monete del Ducato di Savoia sono la maggioranza (55,7%), seguono il Regno di Francia (34%) e il Regno di Portogallo (6.26%). Pochi esemplari appartengono poi al Ducato di Milano, a Genova, al Marchesato di Monferrato, ad Asti, al Ducato di Lorena, al Ducato di Mantova e uno solo alla città

di San Gallo (Svizzera). Per la zecca di Casale Monferrato, notati 5 testoni di Guglielmo II Paleologo (1494-1518) e 2 cornabò di Bonifacio II Paleologo (1518-1530).

Il vaso globulare conteneva una massa di quarti di grosso MI di Savoia, stimabile in 6.500 pezzi circa, uniti tra loro dall'ossidazione. Riconosciuti esemplari battuti dalla zecca di Torino per il duca Carlo II di Savoia nel 1503-06 e nel 1529-35.

La presenza di molti esemplari fior di conio delle zecche di Torino e Bourg-en-Bresse, chiuse all'arrivo delle truppe di Francesco I di Francia nella primavera del 1536, fa ipotizzare che questo sia stato il momento decisivo di formazione dell'insieme. Forse si tratta di un tesoro occultato da un canonico del Duomo?

Cons.: Torino, Museo di Antichità.

Bibl.: BARELLO 1998a; SACCOCCI 2009c, p. 97 n. 18 (dep. 1515-30). Da visita al Museo di Antichità di Torino del 5/1/2025.

Discovery of the find: discovery during archaeological investigations

Other characteristics of the materials: fragmented coins / fragments

(SiF) Torino, santuario della Consolata, n.s. (ante 1885) (dep.: post 840)

Secondo PROMIS 1885 (p. 96), *monetina di Carlo Magno con "metallvm"* da una tomba presso le mura di Torino (Consolata).

In GREPPI, BARELLO, QUIRI, SUBBRIZIO 2009 (p. 130 nota 38) si ipotizza che si possa trattare di un obolo della zecca di Melle o piuttosto di una denaro di Carlo in Calvo con legende *Carlus rex / Metallum*.

La legenda obbligherebbe a riattribuirla a Carlo il Calvo, emessa nella zecca di Melle tra l'840 e l'864.

Discovery of the find: discovery during archaeological investigations

(H) Vidracco, n.s. (dep.: paulo post autumn 475)

The Vidracco hoard consists of five solidi. There is one very common solidus for Leo I and four highly unusual and die-identical issues for Basiliscus from Milan, giving the hoard a disproportional ratio of internal die-links. There are currently five different obverse types of solidi in the name of Basiliscus known to have been struck in Italy: *RIC* X 3301-3302 (these two types share the same obverse die), 3304, 3309, 3311-3313.

In the *RIC* X, John P.C. Kent attributes four types 3301-3302, 3304 and 3309 to the first reign of Julius Nepos, arguably the last legitimate Roman emperor in Italy. These solidi were supposedly struck in the autumn of 475. Only 3301-3302 can be identified as the work of the same die-cutter, and the reverse mintmark "RM" of 3302 indicates that both may have been produced in Rome. No. 3304 is attributed by the *RIC* X to Ravenna, while 3309 is attributed to Milan, as are 3312-3313 (see Figs. 2a-b, 3a-b). Specimens of the types 3301-3302, 3304 and 3309 are kept in the main museum coin collections of Milan, Ravenna, and Turin, but this need not be an indication of either origin or deposition patterns, as the museum coin collections in question have been augmented with acquisitions from beyond the immediate vicinity with no further details in regard to their origin.

(H) valle Antrona, Punta di Saas, 18 settembre 1956 (dep.: post 81 d.C.)

Nel corso di cinque giorni di perlustrazioni e verifica dei cippi di confine nella zona del Passo di Saas, a 3 mila metri di quota, condotto dalla stazione delle Fiamme Gialle di Antrona, il 18 settembre 1956 il brigadiere Francesco Pilloni con Franco Carcassi e Umberto di Donato si imbattono in un una sorta di grotta con delle fessure sulle pareti, utilizzata come bivacco.

Con l'ausilio della canna di un moschetto, dalle fessure vengono recuperati tre dischetti di metallo ricoperti da una ruggine verdastra. Dopo una sommaria pulizia tramite verderame, è emerso che le monete presentavano dei ritratti e avevano incise le lettere 'S C' di *Senatus consultus*, oltre le iniziali di Menenio Agrippa e dell'imperatore Domiziano.

Cons.: In esposizione nella sala del Comune di Antrona Schieranco.
